Preface — XI

Introduction — XIII

Part I: General theory

1	Measure theory — 5
1.1	Preliminaries — 5
1.2	Families of sets — 5
1.2.1	Measurable spaces — 5
1.2.2	Borel σ -algebras — 7
1.3	Measures — 8
1.3.1	General properties — 8
1.3.2	Borel and Radon measures — 9
1.3.3	Null sets — 12
1.4	Measures and outer measures — 15
1.4.1	Carathéodory construction — 15
1.4.2	Extension of measures — 18
1.5	Lebesgue and Lebesgue–Stieltjes measures — 22
1.5.1	Lebesgue measure in $\mathbb{R}^N$ — 22
1.5.2	Lebesgue–Stieltjes measure — 26
1.6	Metric outer measures and capacities — 30
1.6.1	Capacities — 30
1.6.2	Metric outer measures — 32
1.7	Hausdorff measure and capacities — 36
1.8	Signed measures — 39
1.8.1	Hahn and Jordan decompositions — 40
1.8.2	The Banach space of finite signed measures — 43
1.8.3	Absolutely continuous and singular measures — 43
1.8.4	Concentrated and diffuse measures — 47
1.9	Vector measures — 47
1.9.1	Definitions and general results — 48
2	Scalar integration and differentiation — 53
2.1	Measurable functions — 53
2.1.1	Definition and general properties — 53
2.1.2	Convergence results — 57
2.1.3	Quasi-continuous functions — 59

2.2	Integration — 61
2.2.1	Definition of integral — 61
2.3	Product measures — 65
2.3.1	Tonelli and Fubini theorems — 65
2.4	Applications — 67
2.4.1	A useful equality — 67
2.4.2	Steiner symmetrization — 68
2.5	Young measure — 70
2.6	Riesz representation theorem: positive functionals — 71
2.7	Riesz representation theorem: bounded functionals — 78
2.8	Convergence in Lebesgue spaces — 84
2.8.1	Preliminary remarks — 84
2.8.2	Uniform integrability — 85
2.8.3	Strong convergence — 91
2.8.4	Weak and weak* convergence — 93
2.9	Differentiation — 100
2.9.1	Radon–Nikodým derivative — 100
2.9.2	Differentiation of Radon measures on $\mathbb{R}^N$ — 103
3	Function spaces and capacity — 109
3.1	Function spaces — 109
3.1.1	Distributional derivative — 109
3.1.2	Sobolev spaces — 111
3.1.3	Bessel potential spaces — 113
3.1.4	Functions of bounded variation — 114
3.1.5	Sobolev functions — 119
3.2	Capacities associated with a kernel — 121
3.2.1	Preliminaries and definitions — 121
3.2.2	The capacities $C_{g,p}$ — 123
3.2.3	Dependence of $C_{g,p}$ on $p \in [1, \infty)$ — 128
3.3	Bessel, Riesz, and Sobolev capacities — 135
3.3.1	Bessel and Riesz capacities — 135
3.3.2	Metric properties of the Bessel capacity — 136
3.3.3	Sobolev capacity — 139
3.4	Relationship between different concepts of capacity — 142
3.4.1	Bessel versus Hausdorff — 142
3.4.2	Bessel versus Riesz — 145
3.4.3	Bessel versus Sobolev — 145
3.4.4	Sobolev versus Hausdorff — 147
3.4.5	Laplacian capacity versus Sobolev — 147
3.4.6	(m, p) -concentrated and (m, p) -diffuse measures — 148

4	Vector integration — 153
4.1	Measurability of vector functions — 153
4.1.1	Measurability — 153
4.1.2	μ -measurability — 154
4.1.3	Weak and weak* measurability — 159
4.2	Integration of vector functions — 164
4.2.1	Bochner integrability — 164
4.2.2	Fubini theorem — 171
4.2.3	Integration with respect to vector measures — 174
4.2.4	Weaker notions of integral — 175
4.3	The spaces $L^p(X; Y)$, $L^p_w(X; Y)$ and $L^{p,*}_w(X; Y^*)$ — 177
4.3.1	Definition and general properties — 177
4.3.2	Spaces of continuous functions — 180
4.3.3	Convergence theorems — 181
4.3.4	Approximation results and separability — 182
4.4	Duality of vector Lebesgue spaces — 183
4.4.1	The Radon–Nikodým property — 183
4.4.2	Duality and Radon–Nikodým property — 191
4.4.3	Duality results — 197
4.4.4	Duality results: separable Y^* — 198
4.4.5	Duality results: separable Y — 199
4.5	Vector Lebesgue spaces of real-valued functions — 203
4.6	Vector Sobolev spaces — 207
4.6.1	Vector distributions — 207
4.6.2	Definition and general properties — 208
4.6.3	Continuous embedding — 210
4.6.4	Compact embedding — 213
5	Sequences of finite Radon measures — 219
5.1	Notions of convergence — 219
5.1.1	Strong convergence — 219
5.1.2	Weak* convergence — 219
5.1.3	Narrow convergence — 220
5.1.4	Prokhorov distance — 224
5.1.5	Narrow convergence and tightness — 228
5.2	Parameterized measures and disintegration — 234
5.3	Young measures revisited — 240
5.3.1	Weak* convergence — 244
5.3.2	Narrow convergence and tightness — 245
5.4	Sequences of Young measures associated with functions — 249
5.4.1	Weak* convergence of $\{\nu_{u_j}\}$ — 250
5.4.2	Narrow convergence of $\{\nu_{u_j}\}$ — 252

- 5.4.3 Uniform integrability of $\{u_j\}$ — 256
- 5.4.4 Biting lemma — 260

Part II: Applications

- 6 Case study 1: quasilinear parabolic equations — 279**
 - 6.1 Statement of the problem and preliminary results — 279
 - 6.1.1 Weak solutions — 279
 - 6.1.2 Weak entropy solutions — 282
 - 6.2 Persistence — 283
 - 6.3 Uniqueness — 285
 - 6.4 Existence and regularity results — 289
 - 6.4.1 Existence — 289
 - 6.4.2 Regularity — 290
 - 6.5 Proof of existence results: the approximating problems (P_n) — 292
 - 6.5.1 Approximation of the initial data — 292
 - 6.5.2 A priori estimates — 296
 - 6.6 Proof of existence results: letting $n \rightarrow \infty$ — 302
 - 6.7 The case of unbounded ϕ — 314
 - 6.7.1 Definition of solution — 315
 - 6.7.2 Persistence and uniqueness — 316
 - 6.7.3 Existence — 318
 - 6.7.4 Regularization — 319
- 7 Case study 2: hyperbolic conservation laws — 321**
 - 7.1 Statement of the problem — 321
 - 7.1.1 Assumptions and preliminary remarks — 321
 - 7.1.2 Definition of solution — 322
 - 7.2 Uniqueness — 325
 - 7.3 Existence and regularity results — 337
 - 7.4 Proof of existence results: the approximating problems — 338
 - 7.5 Proof of existence results — 346
 - 7.6 Proof of regularity results — 362
- 8 Case study 3: forward-backward parabolic equations — 371**
 - 8.1 Statement of the problem and preliminary results — 371
 - 8.1.1 Notions of solution — 372
 - 8.2 The regularized problem — 374
 - 8.2.1 Existence — 374
 - 8.2.2 A priori estimates — 376
 - 8.2.3 Letting $\epsilon \rightarrow 0^+$ — 380

- 8.3 Existence — **382**
- 8.4 Asymptotic behavior — **387**
- 8.5 Characterization of the limiting Young measure — **396**

Bibliography — 403

Appendix A Topological spaces — 409

List of Symbols — 415

Index — 417
