

Contents

About the author — XI

Chapter 1

Introduction — 1

- 1.1 Distillation process — 1
 - 1.1.1 Continuous reactive distillation process — 1
 - 1.1.2 Reactive divided wall (RDW) distillation process — 2
- 1.2 Industrial perspective of reactive distillation — 3
 - 1.2.1 Esterification — 3
 - 1.2.2 Transesterification — 5
 - 1.2.3 Etherification — 5
 - 1.2.4 TAE synthesis — 6
- 1.3 Measurements in process industry — 6
 - 1.3.1 Hardware measurement — 7
 - 1.3.2 Types of hardware measurements — 7
 - 1.3.3 Importance of hardware measurement — 8
 - 1.3.4 Difficulty in measurement — 9
 - 1.3.5 Problems associated with measurement — 9
 - 1.3.6 Suggestion/improvement in hardware sensor — 9
- 1.4 Soft sensors — 10
- References — 11

Chapter 2

Synthesis in reactive distillation column — 13

- 2.1 Experimental synthesis — 13
 - 2.1.1 Synthesis of biodiesel in a reactive distillation column — 15
 - 2.1.2 Synthesis of *tert*-amyl ethyl ether (TAE) — 18
 - 2.1.3 Synthesis of methyl acetate — 19
 - 2.1.4 Ethyl acetate synthesis — 24
 - 2.1.5 Propyl acetate — 25
 - 2.1.6 Methyl *tert*-butyl ether (MTBE) — 27
 - 2.1.7 ETBE synthesis in pilot RD — 28
- 2.2 Dual RD integration technique — 30
- 2.3 Membrane-assisted reactive divided wall (MRDW) distillation process — 34
- References — 35

Chapter 3**Modeling of reactive distillation column — 37**

- 3.1 Modeling of reactive distillation column — 37
 - 3.1.1 Material and energy balance around condenser — 37
 - 3.1.2 Balance around reactive zone — 38
 - 3.1.3 Component balance around reactive zone — 39
 - 3.1.4 Energy balance around reaction zone — 39
 - 3.1.5 Balance around reboiler — 40
 - 3.1.6 Component balance around reboiler — 40
 - 3.1.7 Energy balance around reboiler — 41
- 3.2 Nonequilibrium modeling — 41
- 3.3 Dynamic balances for the column — 43
 - 3.3.1 Reflux drum — 44
 - 3.3.2 Rectifying and stripping zones — 44
 - 3.3.3 Reactive zone — 44
 - 3.3.4 Feed trays — 45
 - 3.3.5 Column base — 45
 - 3.3.6 Energy balance — 45
 - 3.3.7 Condenser heat duty — 46
 - 3.3.8 Reboiler heat duty — 46
 - 3.3.9 Column pressure — 46
 - 3.3.10 Temperature measurement — 46
 - 3.3.11 Vapor–liquid equilibrium — 47
 - 3.3.12 Molecular weight — 47
 - 3.3.13 Catalyst loading — 48
- 3.4 Modeling of membrane-assisted reactive divided wall (MRDW) column — 48
 - 3.4.1 Material balance — 49
 - 3.4.2 Component balance — 49
 - 3.4.3 Mass transfer balance — 50
- 3.5 Simulation software (Aspen Plus) — 50
 - 3.5.1 Chemical components — 50
 - 3.5.2 Operating conditions — 51
 - 3.5.3 Nonrandom two-liquid models (NRTL) — 51
 - 3.5.4 Optimization using sensitivity analysis tool of Aspen Plus — 52
- References — 54

Chapter 4**Introduction to artificial neural networks — 57**

- 4.1 Why neural networks — 57
 - 4.1.1 History of neural networks — 57
- 4.2 Introduction to biological neurons — 58

4.3	Introduction to artificial neural networks —	59
4.4	Architecture of neural network —	60
4.5	Difference between computers and neural networks —	62
4.6	Properties of neural network —	62
4.7	Important parameters for neural network —	63
4.8	Advantages and disadvantages of neural network —	63
	Advantages —	63
	Disadvantages —	64
4.9	Applications of neural network —	64
4.10	Learning algorithms for neural network —	64
4.11	Classification and types of neural network —	65
4.11.1	Perceptron —	65
4.11.2	ADALINE (adaptive linear neuron element) —	66
4.11.3	MADALINE (many adaptive linear neuron element) —	66
4.11.4	Feedforward neural network (FFNN) —	67
4.11.5	Adaptive resonance theory (ART) —	69
4.11.6	Backpropagation network (BPN) —	69
4.11.7	Recurrent neural network (RNN) —	70
4.11.8	Boltzmann and Cauchy machines —	70
4.11.9	Counterpropagation network —	71
4.11.10	Hopfield network —	71
4.11.11	Self-organizing feature map (SOFM) —	73
4.11.12	Pulse-coupled neural network (PCNN) —	73
4.11.13	Bidirectional associative memory —	75
4.11.14	Neocognitron —	75
4.12	Latest developments to the family of neural networks —	75
4.12.1	Generative adversarial networks —	75
4.12.2	Neuro-fuzzy system (NFS) —	75
4.12.3	Deep neural network (DNN) —	76
4.12.4	Extreme learning machine (ELM) —	77
	References —	78

Chapter 5

Application of artificial neural network — 81

5.1	Background —	81
5.1.1	Artificial neural network (ANN) —	81
5.2	Adaptive linear neuron (ADALINE) —	82
5.3	Backpropagation neural network —	85
5.3.1	Initial weights —	85
5.3.2	Learning rate —	86
5.3.3	Momentum factor —	86
5.3.4	Training data —	86

5.3.5	Number of hidden-layer neurons —	86
5.4	Incremental mode training of BPNN —	86
5.5	Pseudocode of BPNN —	89
5.6	Teaching-learning-based optimization —	90
5.6.1	TLBO algorithm —	90
5.7	Teaching-learning-based optimized neural network (TLBO-NN) —	92
	Reference —	92

Chapter 6

Advanced control of reactive distillation column — 95

6.1	Soft sensors for reactive distillation process —	95
6.2	Inferential control of reactive distillation —	96
6.2.1	Single-loop control strategy —	94
6.2.2	Cascade control strategy —	94
6.2.3	Disturbance tracking —	97
6.2.4	Case study —	98
6.2.5	Disturbance rejection and set point tracking —	98
6.2.6	Validation of soft sensor —	104
6.2.7	Simulation study of dual RD of biodiesel and TAE —	108
6.2.8	Simulation of membrane-assisted RD —	112
6.3	Intelligent control of methyl acetate reactive distillation —	114
6.3.1	Control structure of methyl acetate reactive distillation —	115
6.3.2	Identification of control trays —	116
6.3.3	PID controller —	118
6.4	Fuzzy learning-based counterpropagation network (FCPN) —	118
6.4.1	FCPN for nonlinear dynamical system —	119
6.4.2	FCPN for methyl acetate reactive distillation process —	121
6.4.3	Experimental validation —	128
	References —	133
