

Table of Contents

1. Introduction

1.1. The threat to tropical forests of insular South East Asia 1

1.2. Regeneration of natural tropical primary forest..... 3

1.3. Logging impacts on tropical forests 6

1.4. Sustaining tropical logged forests 8

1.5. The rationale of the study..... 11

2. Study sites and Methods

2.1. Site selection 16

2.2. Tunas site

2.2.1. Location..... 17

2.2.2. Climate 17

2.2.3. Topography and hydrology 18

2.2.4. Geology and soils 19

2.2.5. Forest history and resources 20

2.3. Bonggo site

2.3.1. Location..... 22

2.3.2. Climate 22

2.3.3. Topography and hydrology 23

2.3.4. Geology and soils 24

2.3.5. Forest history and resources 26

2.4. Study plot establishment, arrangement, and design 27

2.5. Data Collection

2.5.1. Measurement in subplots (compartments)..... 29

2.5.2. Wood sample collection and preparation for nitrogen analysis .. 31

2.6. Data analysis 35

3. Accuracy and precision of sample data	
3.1. Data accuracy	36
3.2. Data precision	38
4. Intact primary forests of Tunas and Bonggo	
4.1. Tree family and species composition	
4.1.1. Family composition	41
4.1.2. Species composition	48
4.1.3. Stand composition at another site in western New Guinea	53
4.2. Tree species diversity and similarity in the primary forest	
4.2.1. Species richness	56
4.2.2. Species diversity indices	62
4.2.3. Species similarity	66
4.2.4. Tree diversity in comparisons to other sites in New Guinea	67
4.3. Stand structure and dynamics in the primary forest	
4.3.1. Stem density, mean diameter, and basal area (BA)	70
4.3.2. Diameter distribution and slope of population structure	73
4.3.3. Species distribution in tree size classes	77
4.3.4. Stand height	79
4.3.5. Vertical structure distribution	80
4.3.6. Diameter-height curves	83
4.4. Seedling and sapling characteristics of the primary forest	
4.4.1. Species composition	88
4.4.2. Species diversity	93
4.4.3. Regeneration of canopy tree species	95
4.4.4. Regeneration abundance	97
4.4.5. Diameter and height of saplings	99

5. Logged forests of Tunas and Bonggo	
5.1. Tree species composition in unlogged and logged forests	105
5.2. Tree species richness and diversity in the logged forests	
5.2.1. Species richness	119
5.2.2. Species diversity indices	120
5.3. Stand structure of logged forest	
5.3.1. Diameter distribution.....	123
5.3.2. Species distribution in diameter size classes	127
5.4. Regeneration of canopy tree species	130
6. Light requirements of tree species	
6.1. Concept	135
6.2. Slope of tree species distribution	138
6.3. Stable N isotope ratio ($\delta^{15}\text{N}$) and total N in tree tissue	149
6.4. Diameter distribution, stable N isotope ratio ($\delta^{15}\text{N}$) and total N	156
6.5. Grouping of tree species light requirements	160
7. Silvicultural approaches and further implications	
7.1. Silviculture: General definitions and implications	169
7.2. Silviculture: Existing regulations	170
7.3. Implications of species performance for silviculture approach	171
8. Summary.....	175
References	188
Appendices	214
