

Contents

1 Preliminaries	1
1.1 Model Choice	1
1.2 Types of Problems	2
1.3 General Formulation	4
1.4 Plan of the Book	7
1.5 Bibliographic Notes	8
References	8
2 Frequentist Methods	11
2.1 Introduction	11
2.2 The Cox Test	11
2.2.1 Preliminaries	11
2.2.2 Remarks on the Distribution of T_{fg}	13
2.2.3 The Test Procedure	14
2.3 A Test Based on a Compound Model	21
2.4 Alternative Tests	26
2.4.1 Test for Multiple Hypotheses	26
2.4.2 Test Based on Nondirectional Divergence	29
2.4.3 Test of the Nearest Alternative	32
2.4.4 Test Based on the Moment Generating Function	32
2.4.5 Two Further Tests	34
2.5 Efficiencies of False Separate Models	36
2.5.1 Introduction	36
2.5.2 Efficiency of a false regression model	36
2.6 Properties and Comparisons	40
2.6.1 Asymptotic Power	40
2.6.2 Monte Carlo Comparison and Behavior	41
2.6.3 Test Consistency and Finite-Sample Results	44
2.7 Bibliographic Notes	47
References	47

3 Bayesian Methods 51

3.1 Introduction 51

3.2 Modified Bayes Factors 57

3.2.1 Imaginary Training Sample 57

3.2.2 Partial Bayes Factor (PBF) 57

3.2.3 Fractional Bayes Factor (FBF) 58

3.2.4 Intrinsic Bayes Factor (IBF) 58

3.2.5 Posterior Bayes Factor (POBF) 59

3.2.6 Applications 59

3.3 Full Bayesian Significance Test (FBST) 67

3.4 Bibliographic Notes 69

References 71

4 Support and Simulation Methods 73

4.1 Introduction 73

4.2 Likelihood Inference 73

4.3 Simulations and Bootstrap 77

4.3.1 Simulations 77

4.3.2 Bootstrap 78

4.3.3 Applications 78

4.4 Bibliographic Notes 85

References 85

Appendix A: Maximum Likelihood Estimation (MLE) 87
