

# Contents

## Preface — V

## List of contributing authors — XV

Anita Šalić and Bruno Zelić

### **1 Introduction to environmental engineering — 1**

- 1.1 A new engineering field? — 1
- 1.2 New era – today's environmental engineering — 2
- 1.3 Environmental issues — 5
  - 1.3.1 Air quality – Why it is such a problem? — 8
  - 1.3.2 Soil quality – What problems emerge from soil pollution? — 9
  - 1.3.3 Water quality – Are water wars our future? — 11
- 1.4 What is the future of environmental engineering? — 13
- 1.5 Conclusion — 13
- References — 13

Ivančica Ternjej and Zlatko Mihaljević

### **2 Ecology — 17**

- 2.1 Introduction — 17
- 2.2 Conditions for life — 18
  - 2.2.1 Abiotic factors — 19
  - 2.2.2 Biotic relationships — 20
  - 2.2.3 Community — 27
  - 2.2.4 Ecosystem — 29
  - 2.2.5 Succession — 35
  - 2.2.6 Biomes — 37
  - 2.2.7 Global changes — 37
  - 2.2.8 Applied ecology — 39
- References — 41
- Study questions — 43

Tomislav Bolanča, Šime Ukić and Mirjana Novak Stankov

### **3 Environmental Chemistry — 47**

- 3.1 Introduction — 47
- 3.2 Electrolytes and non-electrolytes — 47
- 3.3 Concentration and activity — 48
- 3.4 Ionization of water — 49
- 3.5 Strong and weak acids — 51
- 3.6 Strong and weak bases — 55
- 3.7 Hydrolysis of salts — 58

3.8	Buffers — 63
3.9	Reactions of complexation — 66
3.10	Redox reactions — 68
3.11	Solubility of minerals — 73
3.11.1	Nature of solvent and solute — 74
3.11.2	Temperature effect — 75
3.11.3	Common-ion effect — 75
3.11.4	Effect of complex formation — 76
3.11.5	Electrolyte effect — 77
3.11.6	Effect of pH of the solution — 78
3.12	Solubility of gases — 83
	References — 83

Felicita Briški and Marija Vuković Domanovac

#### **4 Environmental microbiology — 85**

4.1	Evolution of microorganisms — 85
4.2	The microbial world: classification, metabolism and growth — 86
4.3	Microbial diversity in the environment — 97
4.4	Eutrophication process — 105
4.5	Microorganisms in biodegradation and bioremediation — 106
4.6	Biodegradation of organic pollutants — 109
4.7	Principles of bioremediation — 113
4.7.1	What is bioremediation? — 113
4.7.2	Some groups of microbes — 115
4.8	Composting — 116
4.8.1	What is composting? Composting is nature's way of recycling — 116
	References — 118
	A Appendix — 120

Zoran Nakić, Marta Mileusnić, Krešimir Pavlić and Zoran Kovač

#### **5 Environmental geology and hydrology — 121**

5.1	Floods as natural hazard — 122
5.1.1	Hydrological cycle — 123
5.1.2	Extreme events in hydrology — 128
5.2	Groundwater as geological resource — 131
5.2.1	Geological occurrence of groundwater — 132
5.2.2	Water flow in unsaturated and saturated zone — 133
5.2.3	Mass transport in porous medium — 137
5.2.4	Modelling of water flow and solute transport in porous medium — 140
5.2.5	Groundwater quality and pollution — 143

5.3	Impact of mining industry on environment and human health —	145
5.3.1	MineWaste —	146
5.3.2	Impact on the environment —	148
5.3.3	Impact on human health —	151
5.4	Highlights —	154
	References —	155
	Questions —	158

Aleksandra Sander, Jasna Prlić Kardum, Gordana Matijašić and Krunoslav Žižek

<b>6</b>	<b>Transport phenomena in environmental engineering —</b>	<b>159</b>
6.1	Conservation laws —	160
6.1.1	Macroscopic mass balance —	160
6.1.2	Macroscopic energy balance —	161
6.1.3	Macroscopic momentum balance —	162
6.2	Motion of particles in fluid —	163
6.3	Flow through porous media —	167
6.4	Heat transfer —	174
6.4.1	Heat conductivity —	174
6.4.2	Heat transfer by conduction —	175
6.4.3	Heat transfer by convection —	176
6.4.4	Thermal radiation —	178
6.5	Mass transfer —	180
6.5.1	Molecular diffusion —	181
6.5.2	Coefficient of mass diffusivity —	181
6.5.3	Steady-state molecular diffusion in binary systems —	182
6.5.4	Equimolar counter diffusion —	183
6.5.5	Diffusion of component A through stagnant component B —	183
6.5.6	Transient diffusion —	183
6.5.7	Convective Mass Transfer —	185
6.5.8	Interphase mass transfer —	185
	References —	191
	Examples for practice —	191

Karolina Maduna and Vesna Tomašić

<b>7</b>	<b>Air pollution engineering —</b>	<b>195</b>
7.1	Introduction —	195
7.1.1	The complexities of the air pollution protection —	195
7.1.2	Basic definitions and classifications —	199
7.2	Transport and transformation of air pollutants in the atmosphere —	207
7.2.1	Primary and secondary air pollutants —	208

- 7.2.2 Acid rain — **214**
- 7.2.3 Greenhouse effect — **214**
- 7.2.4 Global climate change vs global warming — **215**
- 7.3 Air pollution control — **215**
- 7.3.1 Selection of the air pollution control approach and control technique — **215**
- 7.3.2 Appropriate use of units and some basics of air pollution control — **219**
- 7.3.3 Control of particulate air pollution — **222**
- 7.3.4 Control of gaseous and vapor pollutants — **233**
  - References — **238**
  - Questions and exercises to get you thinking — **240**

Danijela Ašperger, Davor Dolar, Krešimir Košutić, Hrvoje Kušić, Ana Lončarić Božić and Marija Vuković Domanovac

**8 Water and wastewater treatment engineering — 241**

- 8.1 Water and wastewater characterization and analysis — **241**
- 8.1.1 Biological characteristics — **244**
- 8.1.2 Physical characteristics — **244**
- 8.1.3 Chemical characteristics — **245**
- 8.2 Water and wastewater treatment by membrane processes — **249**
- 8.3 Biological wastewater treatment — **256**
- 8.3.1 Activated sludge process — **258**
- 8.3.2 Environmental factors — **259**
- 8.3.3 Membrane bioreactor — **260**
- 8.3.4 Biology of activated sludge — **260**
- 8.3.5 The Monod equation — **262**
- 8.4 Advanced oxidation processes — **263**
- 8.4.1 Chemical AOPs — **264**
- 8.4.2 Photo-assisted AOPs — **268**
- 8.4.3 Reactions and kinetics of hydroxyl radicals — **271**
  - References — **273**
  - Discussion, Questions and Exercises — **275**

Ivica Kisić, Željka Zgorelec and Aleksandra Percin

**9 Soil treatment engineering — 277**

- 9.1 Introduction — **277**
- 9.2 Basics of soil science — **278**
- 9.3 Soil formation — **280**
- 9.3.1 Factors and processes of soil formation — **280**
- 9.3.2 Basic soil characteristics — **281**

9.3.3	Roles of soil —	294
9.3.4	Potential soil contaminants —	297
9.3.5	Remediation technologies for contaminated soils —	300
9.3.6	Types, forms, techniques and technologies of remediation —	301
	References —	311
	Practical tasks —	313
	Study questions —	315

Anita Šalić, Ana Jurinjak Tušek and Bruno Zelić

## **10 Modeling of environmental processes — 317**

10.1	Models —	317
10.2	Mathematical models and modeling —	319
10.3	Basic rules in mathematical modeling —	323
10.4	Balance equations – Solving mathematical models —	335
10.5	Conclusion —	347
	Important notification —	348
	References —	348
	Examples for practice —	348

Hrvoje Kušić and Ana Lončarić Božić

## **11 Risk assessment — 357**

11.1	Introduction —	357
11.1.1	What is risk? —	357
11.1.2	What is hazard? —	358
11.2	Looking for answers —	359
11.3	Conceptual models —	360
11.4	Risk assessment framework —	362
11.5	Environmental risk assessment —	364
11.6	Risk assessment methodology —	366
11.7	Risk assessment for chemicals —	368
11.8	Dose–response relationship —	372
11.9	Risk assessment techniques —	375
11.9.1	Risk matrices —	375
11.9.2	Logic trees —	377
11.9.3	Event trees —	379
11.10	Conclusion marks —	380
	References —	380
	Study questions and tasks —	382

## **Index — 385**
