

Table of contents

Acknowledgments	I
Zusammenfassung	V
Abstract	X
Nomenclature	XV
1. Motivation and aims	1
2. State-of-the-art process design for spray flame synthesis of metal oxide nanoparticles	5
2.1. Introduction to history and development in flame nanoparticle technology	5
2.1.1. Historical background	6
2.1.2. Enabling multi-metal oxides – the rise of flame spray pyrolysis	7
2.2. Process overview of flame aerosol-based manufacturing	10
2.2.1. Raw materials and precursors	12
2.2.2. Aerosol flame reactor concepts	15
2.2.3. Cooling	19
2.2.4. <i>In situ</i> conditioning: mixing, coating and functionalization	20
2.2.5. Particle collection: filtration and thermophoretic deposition	22
2.2.6. Exhaust gas treatment	24
2.2.7. Post-processing: particle handling, storing and modification	25
2.2.8. Application	27
2.3. Principles in process design and computational reactor modeling	29
2.3.1. Particle growth mechanisms in liquid-fed reactors	29
2.3.2. The concept of characteristic process times	32
2.3.3. Particle dynamics and population balance models	36
2.3.4. Multiscale process design	39
2.3.5. Continuum models	41
2.3.6. Mesoscale models	44
2.3.7. Molecular dynamics models	46
2.3.8. Quantum mechanics models	49
2.4. Experimental process and nanoparticle diagnostics	51
2.4.1. Diagnostics for spray combustion	52
2.4.2. Diagnostics for aerosols and nanoparticles	58
3. Methods	65
3.1. Experimental methods	65
3.1.1. Synthesis of lithium titanate by open FSP (methods of chapter 4.1)	67
3.1.2. Synthesis of zirconia by open FSP (methods of chapter 4.2)	73
3.1.3. Synthesis of zirconia by enclosed FSP (methods of chapter 4.3)	79
3.1.4. Manufacturing of zirconia particle layers by FSP (methods of chapter 4.4)	81
3.2. Theoretical and numerical methods	86
3.2.1. CFD-PBM of open FSP reactor (methods of chapter 4.2)	86
3.2.2. CFD-PBM of enclosed FSP reactor (methods of chapter 4.3)	92
3.2.3. Modeling of flame aerosol deposition (methods of chapter 4.4)	93
4. Results	109
4.1. Screening precursor-solvent combinations for lithium titanate	109
4.1.1. Precursor-solvent screening	110
4.1.2. FTIR analysis of titanium precursor-solvent combinations	111

4.1.3. FTIR analysis of lithium precursor-solvent combinations.....	114
4.1.4. Combinations of lithium and titanium precursor-solutions.....	116
4.1.5. Long term stability of the spray solutions.	117
4.1.6. Crystal phase compositions and diameters of flame-sprayed powders	117
4.1.7. Single droplet combustion and carboxylation of nitrates.....	122
4.1.8. TEM analysis of single droplet and spray combustion products	125
4.1.9. Identification of undesired impurities of as-obtained LTO nanopowders.....	128
4.1.10. Non-lithiated, partially lithiated and fully lithiated $\text{Li}_4\text{Ti}_5\text{O}_{12}$	131
4.1.11. Concluding remarks of chapter 4.1	132
4.2. Evolution of zirconia nanoparticles in unconfined/open FSP reactors.....	133
4.2.1. Dispersion gas flow field	134
4.2.2. Liquid atomization and droplet evaporation	136
4.2.3. Process dynamics and temperature	139
4.2.4. Precursor conversion and particle nucleation.....	142
4.2.5. Experimental primary and agglomerate nanoparticle diameters	144
4.2.6. PBM sensitivity analysis.....	148
4.2.7. Calculation of nanoparticle diameter evolution	151
4.2.8. Concluding remarks of chapter 4.2	154
4.3. Influence of reactor enclosure and gas entrainment on FSP-made zirconia	155
4.3.1. Entrainment of open FSP for estimating co-flow air in enclosed flame sprays	156
4.3.2. Gas temperature and model refinements	159
4.3.3. Particle size, yield and crystallinity	160
4.3.4. Concluding remarks of chapter 4.3	163
4.4. Deposition of FSP-made zirconia particles <i>via</i> thermophoresis and cake filtration ..	164
4.4.1. Temperature at the thermophoretic deposition stage	165
4.4.2. Thermophoretic deposition of FSP nanoparticle layers	167
4.4.3. Vacuum filter deposition of FSP nanoparticles	172
4.4.4. Concluding remarks of chapter 4.4	177
5. Summary, conclusions and outlook.....	179
5.1. Summary and conclusions	179
5.2. Outlook	182
5.2.1. Multiscale model concepts	183
5.2.2. Development of non-intrusive diagnostics.....	183
5.2.3. The need for "standardized conditions" in flame spray reactors	184
5.2.4. Continuing demand for sustainable precursor-solvent mixtures	185
References.....	186
Appendix	223
A Supporting figures and tables of chapter 4.1	223
B Supporting figures and tables of chapter 4.2	232
C Supporting figures of chapter 4.3	239
D Supporting figures of chapter 4.4	240
List of publications with content related to this thesis.....	243
Acknowledgements of contributions from supervised students and colleagues	246
Declaration	248
