

Contents

Preface — V

Chapter 1

Introduction — 1

- 1.1 Development history of aeroelasticity — 2
- 1.2 Computational aeroelasticity method — 4
- 1.3 Computational aeroelasticity software — 7
- 1.4 Key techniques for solving aeroelastic problems by CFD/CSD coupling method — 8
 - 1.4.1 Simulation of nonlinear characteristics of the fluid and solid domains — 9
 - 1.4.2 Motion strategy for moving grid — 9
 - 1.4.3 Continuity and compatibility conditions for fluid and structure interface — 9
 - 1.4.4 Calculation efficiency of fluid and structure coupling — 10
- Bibliography — 11

Chapter 2

Unsteady CFD technology — 13

- 2.1 Introduction — 13
- 2.2 Governing equations — 13
- 2.3 Finite volume method — 15
- 2.4 Spatial discretization methodologies — 17
 - 2.4.1 Central scheme with artificial dissipation — 19
 - 2.4.2 Van Leer's FVS scheme — 21
 - 2.4.3 Roe's FDS scheme — 22
 - 2.4.4 AUSM scheme — 23
- 2.5 Limiter functions and monotone upstream-centered scheme for conservation laws interpolation — 26
- 2.6 Temporal discretization — 29
 - 2.6.1 Explicit time-advancing schemes — 30
 - 2.6.2 Implicit time-advancing schemes — 30
 - 2.6.3 Second-order implicit time-advancing schemes — 34
- 2.7 Turbulence modeling — 35
 - 2.7.1 Baldwin-Lomax algebraic model — 36
 - 2.7.2 Spalart-Allmaras one-equation model — 37
 - 2.7.3 $k-\omega$ SST two-equation model — 39
 - 2.7.4 Detached eddy simulation — 40
- 2.8 Geometric conservation law — 42
- 2.9 Examples of CFD in engineering — 42

2.9.1	Two-dimensional airfoil of RAE2822 —	43
2.9.2	Wing/body/tail configuration of NASA CRM —	44
2.9.3	Wing/body/pylon/nacelle configuration of DLR-F6 —	45
2.9.4	Unsteady computation of AGARD CT-5 —	49
	Bibliography —	53

Chapter 3

Numerical method for nonlinear structural response computation with geometric nonlinearity — 57

3.1	Introduction —	57
3.2	Deformation and movement —	59
3.2.1	Definition of variables and coordinate system —	59
3.2.2	Strain measurement —	64
3.2.3	Stress measurement —	66
3.2.4	Lagrangian conservation equation —	67
3.3	Variational principle —	69
3.3.1	Classical variational principle of elasticity theory —	69
3.3.2	Generalized variational principle of elasticity theory —	73
3.4	Multivariate solid-shell element —	79
3.4.1	Three fields Fraeijis de Veubeke–Hu–Washizu variational principle —	79
3.4.2	Nonlinear finite element discretization —	80
3.4.3	Procedure of solving algorithm —	80
3.3.4	Results and analysis —	82
3.5	Finite element model of geometric nonlinearity of beam-shell element based on CR theory —	85
3.5.1	Tangent stiffness matrix derivation of two-dimensional beam element —	85
3.5.2	Derivation of tangent stiffness matrix for a three-dimensional shell element based on CR method —	89
3.6	Solution of nonlinear finite element equations —	93
3.6.1	Nonlinear solution technique for structural static analysis —	95
3.6.2	Nonlinear solution technology for structural dynamic analysis —	97
3.6.3	Numerical analysis —	106
	Bibliography —	113

Chapter 4

Interpolation and moving-grid technique for CFD/CSD coupling program — 115

4.1	Introduction —	115
4.2	Interpolation methods —	117
4.2.1	Infinite-plate splines method —	118

- 4.2.2 Finite-plate splines method — 119
- 4.2.3 Multiquadric-biharmonic method — 120
- 4.2.4 Thin-plate splines method — 120
- 4.2.5 Inverse isoparametric mapping method — 121
- 4.2.6 Nonuniform B splines — 121
- 4.2.7 Spatial interpolation of load parameters — 121
- 4.3 Coupling interface design — 121
- 4.3.1 Interface mapping based on constant volume transformation method — 122
- 4.3.2 Interface mapping based on boundary element method — 129
- 4.3.3 Numerical examples — 134
- 4.4 Moving-grid technique — 144
- 4.4.1 Geometric interpolation method — 145
- 4.4.2 Transfinite interpolation method — 147
- 4.4.3 Radial basis function method — 149
- 4.4.4 Shape-preserving moving-grid method — 154
- 4.4.5 Numerical example of moving-grid techniques — 157
- Bibliography — 163

Chapter 5

CFD/CSD coupling solution technology — 169

- 5.1 Introduction — 169
- 5.2 Accuracy analysis of the common CFD/CSD coupling algorithms — 170
- 5.2.1 Introduction to the common coupling algorithms — 170
- 5.2.2 Accuracy analysis based on energy transfer — 174
- 5.3 The design of the high-accuracy CFD/CSD coupling algorithm — 180
- 5.3.1 Improved coupling algorithm design — 180
- 5.3.2 Time-accuracy analysis of the improved coupling algorithm — 184
- 5.4 Numerical example of the CFD/CSD coupling algorithm — 185
- 5.4.1 Isogai wing profile aeroelastic simulation — 185
- 5.4.2 Aeroelastic response analysis of AGARD 445.6 wing — 187
- Bibliography — 192

Chapters 6

Reduced-order modeling techniques of nonlinear aeroelastic system — 195

- 6.1 Introduction — 195
- 6.2 Reduced-order model of unsteady aerodynamic force based on Volterra series — 196
- 6.2.1 Multiwavelet and multiresolution analysis — 196
- 6.2.2 Piecewise quadratic orthogonal multiwavelet method — 197
- 6.2.3 Boundary-adaptive scaling function and wavelet — 204

- 6.2.4 Orthogonal multiwavelet multiresolution analysis — **205**
- 6.2.5 Volterra kernel approximation — **209**
- 6.2.6 Adaptive QR decomposition recursive least squares
 algorithm — **214**
- 6.2.7 Numerical examples — **216**
- 6.3 ROMs for unsteady aerodynamic forces based on state space — **221**
- 6.3.1 Pulse/ERA method — **222**
- 6.3.2 SCI/ERA method — **223**
- 6.3.3 Numerical examples — **226**
- 6.4 Reduced-order model of aeroelastic system based on POD
 method — **228**
- 6.4.1 POD-based snapshot method — **228**
- 6.4.2 Reduced-order modeling of aeroelastic system based on POD
 method — **230**
- 6.5 Reduced order of aeroelastic system based on BPOD method — **233**
- 6.5.1 Balance truncated reduction theory — **233**
- 6.5.2 Construction of transformation matrix — **234**
- 6.5.3 The connection between POD snapshot and Gramian matrix — **235**
- 6.5.4 Numerical examples — **236**
- 6.6 Nonlinear aerodynamic reduction model based on POD-Galerkin
 projection — **241**
- 6.6.1 Modification of flow governing equation — **242**
- 6.6.2 Grid velocity definition — **243**
- 6.6.3 POD-Galerkin projection — **244**
- 6.6.4 Correction method — **245**
- 6.6.5 Numerical examples — **246**
- Bibliography — **250**

Chapter 7

- Aeroelastic software application based on CFD/CSD coupling method — 253**
- 7.1 Introduction — **253**
- 7.2 Introduction to computational aeroelastic software — **253**
- 7.2.1 Software features — **253**
- 7.2.2 Overall design of the software — **254**
- 7.2.3 Software system framework — **256**
- 7.2.4 Data user and its subclasses — **259**
- 7.3 Software usage — **263**
- 7.3.1 Preprocessing software — **263**
- 7.3.2 Solver interface — **270**
- 7.3.3 Data display and processing — **271**
- 7.4 Aeroelastic software application based on CFD/CSD coupling
 method — **272**

- 7.4.1 Static aeroelastic analysis of large aspect ratio wings — 272
- 7.4.2 Supersonic flutter analysis of aerodynamic control surface — 277
- 7.4.3 Dynamic load in aeroelastic analysis — 283
- 7.4.4 Influence of dynamic perturbation on aeroelasticity — 290
- 7.4.5 Aeroelastic analysis of civil aircraft — 299
- Bibliography — 311

Index — 313
