List of contributing authors — IX

Samuel E. Lohse

1	Size and shape control of metal nanoparticles in millifluidic reactors — 1
1.1	Introduction — 2
1.2	Batch metal nanoparticle synthesis in solution — 8
1.2.1	General strategies in size control for functionalized metal NP synthesis — 8
1.2.2	Synthesis of thiol-stabilized spherical AuNPs using Bunte salts (alkylthiosulfates) as thiol precursors — 11
1.2.3	Synthesis of sub-1.0 nm Cu nanoclusters — 12
1.2.4	General strategies for anisotropic metal NP shape control — 12
1.2.5	Silver-assisted seeded growth synthesis of gold nanorods with aspect ratios (1.5–4.0) — 16
1.2.6	Au@Pd nanocube seeded growth — 17
1.3	Reactor construction — 18
1.3.1	Basic design elements of millifluidic reactors — 18
1.3.2	Continuous-flow reactor systems — 21
1.3.3	Construction of a continuous-flow millifluidic reactor — 22
1.3.4	Segmented-flow reactor systems — 23
1.3.5	Construction of a segmented-flow reactor for Au@Pd core-shell NP synthesis — 24
1.3.6	Controlling NP size and shape through reactor operation parameters — 24
1.3.7	Interfacing Real-Time Monitoring — 25
1.3.8	In situ monitoring using absorbance spectroscopy — 26
1.3.9	In situ monitoring using X-ray absorption spectroscopy (XAS) — 27
1.3.10	In situ monitoring using small-angle X-ray scattering (SAXS) — 27
1.3.11	In situ monitoring of metal NP growth — 28
1.4	Metal NP size control in millifluidic reactors — 30
1.5	Millifluidic shape control in metal NP synthesis — 34
1.6	Surface chemistry control in millifluidic reactors — 37
1.7	Essential safety considerations — 40
1.8	Conclusions — 41
	References — 42
	Bionote — 48

Liangliang Lin, Sergey A. Starostin, Sirui Li and Volker Hessel

2	Synthesis of metallic nanoparticles by microplasma — 49
2.1	Introduction — 50

2.2	Microplasma systems for metallic nanoparticles synthesis —	55
2.2.1	Microplasma-assisted process for metallic nanoparticles synthesis in the gas phase —	56
2.2.2	Microplasma-assisted process for metallic nanoparticles synthesis in the liquid phase —	63
2.3	Characterization methodologies and analytic techniques —	69
2.3.1	<i>In situ</i> characterization of the microplasma-assisted precursors dissociation process —	70
2.3.2	<i>Ex situ</i> characterization of the generated nanoparticles —	74
2.4	Representative examples and possible mechanisms —	81
2.4.1	Gas phase synthesis of metallic nanoparticles and involved mechanisms —	83
2.4.2	Liquid phase synthesis of metallic nanoparticles and mechanisms —	86
2.5	Critical safety considerations —	89
2.6	Conclusions and future perspective —	90
	References —	92
	Bionotes —	101

Leticia García-Cruz, Vicente Montiel and José Solla-Gullón

3 Shape-controlled metal nanoparticles for electrocatalytic applications — 103

3.1	Introduction —	104
3.2	Preparation methods —	107
3.2.1	Synthesis of shape-controlled metal nanoparticles —	107
3.2.2	Surface cleanness: a key point in electrocatalysis —	109
3.3	Characterization methodologies —	116
3.3.1	Electrochemical probes for the characterization of the surface structure of the shaped metal nanoparticles: qualitative and quantitative approaches —	116
3.3.2	Electrocatalysis on shape-controlled metal nanoparticles: representative cases for relevant electrochemical reactions —	124
3.4	Formic acid electrooxidation —	125
3.5	Methanol electrooxidation —	128
3.6	Ethanol electrooxidation —	130
3.7	Oxygen reduction reaction —	131
3.8	CO ₂ electroreduction —	132
3.9	Critical safety considerations —	137
3.10	Conclusions and future perspective —	137
	References —	138
	Bionotes —	156

He Huang, Hendrik du Toit, Luca Panariello, Luca Mazzei
and Asterios Gavriilidis

4 Continuous synthesis of gold nanoparticles in micro- and millifluidic systems — 157

- 4.1 Introduction — **158**
- 4.1.1 Applications of gold nanoparticles — **158**
- 4.1.2 Continuous synthesis of gold NPs — **161**
- 4.2 Requirements for quality-by-design synthesis — **162**
- 4.2.1 Characterization and kinetics of nanoparticle synthesis — **163**
- 4.2.2 Mathematical modelling of nanoparticle synthesis — **168**
- 4.3 Review of research on gold nanoparticle flow synthesis — **170**
- 4.3.1 Gold nanoparticle synthesis in single-phase flow systems — **170**
- 4.3.2 Gold nanoparticle synthesis in two-phase flow systems — **181**
- 4.4 Guidelines for the design of continuous nanoparticle processes — **191**
- 4.4.1 A general overview of nanoparticle synthesis process development — **191**
- 4.4.2 Challenges and solutions of micro/millifluidic processes — **194**
- 4.5 Critical safety considerations — **205**
- 4.6 Conclusions and future perspective — **207**
- References — **208**
- Bionotes — **218**

Jiangwei Zhang, Zhimin Li, Kai Zheng and Gao Li

5 Synthesis and characterization of size-controlled atomically precise gold clusters — 221

- 5.1 Introduction — **222**
- 5.2 Preparation methods — **224**
- 5.2.1 Phosphine protected gold clusters — **224**
- 5.2.2 Thiolate protected gold clusters — **226**
- 5.2.3 Alkynyl protected gold clusters — **229**
- 5.2.4 Selenolate protected gold clusters — **230**
- 5.2.5 Mixed ligands protected gold clusters — **230**
- 5.3 Characterization methodologies and instrumentation techniques — **232**
- 5.3.1 Mass spectrometry — **233**
- 5.3.2 UV-Visible absorption spectrometry — **235**
- 5.3.3 X-ray single crystal diffraction — **236**
- 5.3.4 Electron diffraction — **238**
- 5.3.5 Nuclear magnetic resonance — **238**

5.3.6	X-Ray photoelectron spectroscopy —	240
5.3.7	Extended X-ray absorption fine structure —	241
5.3.8	Powder X-ray diffraction spectroscopy —	242
5.4	Typical synthetic case studies —	243
5.5	Critical Safety Considerations —	257
5.6	Conclusion and Future Perspective —	257
	Appendix —	258
	References —	261
	Bionotes —	268
