Contents

Acknowledgments — VII

Introduction — 1

Part I: **The different localizations, facets and forms of intelligence**

1 Intelligence in human animals — 17

2 Intelligence in biological animals — 33

3 Intelligence in artificial animals — 59

Part II: **Scaffolding intelligence**

4 Preliminaries and prior work on framing intelligence — 99
- 4.1 The cognitive ladder — **99**
- 4.2 The ladder of prediction — **104**
- 4.3 The ladder of causation — **107**

5 Towards a causal theory of intelligence — 118
- 5.1 The universal taxonomy: More nuanced dimensions of intelligence and causality — **119**
- 5.2 The inverted radex model of intelligence — **139**
- 5.3 A dynamic approach for broad and multiple intelligences — **147**

6 Theory in action: Causal modeling — 151

7 Theory validation — 159

Part III: **Evaluating machine intelligence in current and past AI**

8 The Turing Test — 177

9 Caveats and innovations — 183

10 A tentative solution — 193

Part IV: **Singularity hypotheses**

11 Arguments conducive to the belief that the singularity is near — 209
- 11.1 The hardware-based argument by Moravec (1999) and Kurzweil (2006) — **209**
- 11.2 The original argument by Good (1965) and its interpretation by Chalmers (2010) — **215**
- 11.3 The doomsayer scenario advanced by Bostrom (2016) — **219**

12 Arguments against strong AI: Close but no cigar — 224
- 12.1 Gödelian arguments — **225**
- 12.2 Dreyfus' prophecy and legacy — **229**
- 12.3 Searle's Chinese Room thought experiment — **233**

13 Closing remarks — 238

Overall conclusion and some practical implications — 241

References — 249

About the author — 279
