

Contents

1. Introduction	1
1.1 Basic Concepts. Examples	1
1.2 Isomorphisms and Homomorphisms. Division Algebras	6
1.3 Representations and Modules	9
1.4 Submodules and Factor Modules. Ideals and Quotient Algebras	13
1.5 The Jordan-Hölder Theorem	18
1.6 Direct Sums	21
1.7 Endomorphisms. The Peirce Decomposition	23
Exercises to Chapter 1	29
2. Semisimple Algebras	31
2.1 Schur's Lemma	31
2.2 Semisimple Modules and Algebras	32
2.3 Vector Spaces and Matrices	35
2.4 The Wedderburn-Artin Theorem	38
2.5 Uniqueness of the Decomposition	39
2.6 Representations of Semisimple Algebras	40
Exercises to Chapter 2	43
3. The Radical	44
3.1 The Radical of a Module and of an Algebra	44
3.2 Lifting of Idempotents. Principal Modules	48
3.3 Projective Modules and Projective Covers	51
3.4 The Krull-Schmidt Theorem	55
3.5 The Radical of an Endomorphism Algebra	56
3.6 Diagram of an Algebra	60
3.7 Hereditary Algebras	65
Exercises to Chapter 3	67
4. Central Simple Algebras	69
4.1 Bimodules	69
4.2 Tensor Products	71
4.3 Central Simple Algebras	73
4.4 Fundamental Theorems of the Theory of Division Algebras	75
4.5 Subfields of Division Algebras. Splitting Fields	77
4.6 Brauer Group. The Frobenius Theorem	78
Exercises to Chapter 4	80

5. Galois Theory	82
5.1 Elements of Field Theory	82
5.2 Finite Fields. The Wedderburn Theorem	85
5.3 Separable Extensions	86
5.4 Normal Extensions. The Galois Group	90
5.5 The Fundamental Theorem of Galois Theory	92
5.6 Crossed Products	95
Exercises to Chapter 5	100
6. Separable Algebras	104
6.1 Bimodules over Separable Algebras	104
6.2 The Wedderburn-Malcev Theorem	107
6.3 Trace, Norm, Discriminant	111
Exercises to Chapter 6	115
7. Representations of Finite Groups	117
7.1 Maschke's Theorem	117
7.2 Number and Dimensions of Irreducible Representations	118
7.3 Characters	120
7.4 Algebraic Integers	123
7.5 Tensor Products of Representations	124
7.6 Burnside's Theorem	128
Exercises to Chapter 7	130
8. The Morita Theorem	135
8.1 Categories and Functors	135
8.2 Exact Sequences	140
8.3 Tensor Products	143
8.4 The Morita Theorem	147
8.5 Tensor Algebras and Hereditary Algebras	151
Exercises to Chapter 8	155
9. Quasi-Frobenius Algebras	159
9.1 Duality. Injective Modules	159
9.2 Lemma on Separation	162
9.3 Quasi-Frobenius Algebras	165
9.4 Uniserial Algebras	169
Exercises to Chapter 9	172
10. Serial Algebras	174
10.1 The Nakayama-Skornjakov Theorem	174
10.2 Right Serial Algebras	177
10.3 The Structure of Serial Algebras	181
10.4 Quasi-Frobenius and Hereditary Serial Algebras	185
Exercises to Chapter 10	188

11. Elements of Homological Algebra	190
11.1 Complexes and Homology	190
11.2 Resolutions and Derived Functors	193
11.3 Ext and Tor, Extensions	198
11.4 Homological Dimensions	202
11.5 Duality	204
11.6 Almost Split Sequences	206
11.7 Auslander Algebras	208
Exercises to Chapter 11	210
References	212
 Quasi-hereditary Algebras (<i>Appendix by Vlastimil Dlab</i>)	213
A.1 Preliminaries. Standard and Costandard Modules	213
A.2 Trace Filtrations. The Categories $\mathcal{F}(\Delta)$ and $\mathcal{F}(\nabla)$	216
A.3 Basic Properties	221
A.4 Canonical Constructions	228
A.5 Characterization of the Category $\mathcal{F}(\Delta)$	238
A.6 Final Remarks	241
 References to the Appendix	244
