Preface — V

1 Introduction — 1

- 1.1 Motivation — 1
 - 1.1.1 Bilevel programming — 1
 - 1.1.2 Bilevel programming under uncertainty — 2
 - 1.1.3 Trilevel programming — 4
 - 1.1.4 Bilevel multifollower programming — 5
- 1.2 A background on multilevel optimization — 6
 - 1.2.1 Bilevel continuous optimization — 6
 - 1.2.2 Bilevel mixed-integer optimization — 10
 - 1.2.3 Trilevel optimization — 13
 - 1.2.4 Multifollower optimization — 16
- 1.3 Introduction to multiparametric optimization — 18
 - 1.3.1 Multiparametric linear programming (mp-LP) — 19
 - 1.3.2 Multiparametric quadratic programming (mp-QP) — 22
 - 1.3.3 Multiparametric mixed-integer linear programming — 24
 - 1.3.4 Multiparametric mixed-integer quadratic programming — 25
 - 1.3.5 Solution of continuous bilevel problems through multiparametric programming — 28
- 1.4 Organization of the book — 29

2 Bilevel mixed-integer optimization — 30

- 2.1 Mixed-integer linear bilevel optimization — 30
 - 2.1.1 Numerical examples — 33
- 2.2 Mixed-integer quadratic bilevel optimization — 40
 - 2.2.1 Numerical examples — 42
- 2.3 Mixed-integer bilevel optimization with right-hand side uncertainty — 46
 - 2.3.1 Numerical example — 48
 - 2.3.2 Conclusion — 50

3 Multilevel optimization — 52

- 3.1 Mixed-integer linear trilevel optimization — 52
 - 3.1.1 Numerical examples — 57
- 3.2 Mixed-integer quadratic trilevel optimization — 66
 - 3.2.1 Numerical example — 68
- 3.3 Extensions to more general multilevel optimization problems — 70

3.3.1	Multilevel mixed-integer nonlinear optimization —	70
3.3.2	Mixed-integer multifollower optimization —	73
3.3.3	Conclusion —	77
4	Application areas —	78
4.1	B-MILP and mp-B-MILP: distribution and production planning —	78
4.1.1	Uncertainty in supply chain systems —	78
4.1.2	Bilevel programming model for a supply chain planning problem —	79
4.1.3	Solving the supply chain planning problem —	81
4.2	mp-B-QP: Hierarchical model predictive control —	86
4.2.1	CSTR process system —	87
4.2.2	Controller implementation – PAROC® framework and B-POP —	87
4.3	T-MILP: Adjustable robust optimization —	91
4.3.1	ARO as a trilevel optimization problem —	93
4.3.2	Numerical examples —	94
4.4	Planning and scheduling integration (MF-B-MILP) —	99
4.4.1	Problem description —	99
4.4.2	Production planning problem —	100
4.4.3	Scheduling problems —	100
4.4.4	Solution method —	102
4.5	Integration of design and scheduling (MF-B-MILP) —	104
4.5.1	Bilevel formulation for the integration of process design and scheduling —	104
4.5.2	Illustrative case study —	107
4.5.3	Conclusion —	111
5	Computational implementation – B-POP toolbox —	112
5.1	Bilevel programming solvers —	112
5.2	Bilevel problem generator —	112
5.3	Bilevel problem library —	114
5.4	Assessing the efficiency and performance of B-POP —	114
5.5	Discussion on the computational results —	114
A	Appendix —	121
A.1	PARametric optimization and control framework —	121
B	Appendix —	123
B.1	POP – The parametric optimization toolbox —	123
C	Summary of mp-MILP and mp-MIQP solution algorithms —	125
C.1	Algorithm for the solution of mp-MILP problems —	125
C.2	Algorithm for the solution of mp-MIQP problems —	125

Bibliography — 129

Index — 143
