

Contents

Preface — VII

Overview and author contact information — XI

Jürgen Gailer and Raymond J. Turner

Chapter 1

Introduction and textbook scope — 1

Andrii Lekhan and Raymond J. Turner

Chapter 2

Overview of biochemical toxicology principles — 11

Raymond J. Turner

Chapter 3

Bacterial response to toxins — 47

Maryam Doroudian and Jürgen Gailer

Chapter 4

Toxic metal(loid) species at the blood–organ interface — 81

Graham N. George, Ben Huntsman, Olena Ponomarenko, Emérita Mendoza Rengifo, Monica Y. Weng, Julien, J. H. Cotelesage, Natalia V. Dolgova, and Ingrid J. Pickering

Chapter 5

Structural and chemical aspects of the molecular toxicology of heavy metals and metalloids — 103

A. L. Norman, J. Xie, C. Kruschel, and M. Wieser

Chapter 6

Using isotopic abundances to follow anthropogenic emissions: an example of sulfur, oxygen and boron isotopes in a Canadian watershed — 149

Daniel Sánchez-Rodas, Ana M. Sánchez de la Campa, and María Millán Martínez

Chapter 7

The role of metalloids (As, Sb) in airborne particulate matter related to air pollution — 169

Eve Kroukamp and Victor Wepener

Chapter 8

Toxic trace metals in the environment, a study of water pollution — 191

Raymond J. Turner

Chapter 9

Toxicity of nanomaterials — 221

Som Niyogi, Kamran Shekh, and Solomon Amuno

Chapter 10

Toxicology of trace metals in the environment: a current perspective — 249

Feiyue Wang and Robie W. Macdonald

Chapter 11

Socioeconomic, political, and legal ramifications of environmental and biochemical toxicology: the complicated story of mercury — 287

Jürgen Gailer and Raymond J. Turner

Chapter 12

Suggested problems, case studies, assignments — 313

Index — 327
