

Contents

Foreword — V

Part I: General

- 1 The scope of organometallic chemistry — 3**
- 2 Organometallic molecules: the nature of metal–carbon bonds — 5**
 - 2.1 Sigma-covalent (bicentric bielectronic) metal–carbon bonds — 5
 - 2.2 Highly polar and ionic metal–carbon bonds — 7
 - 2.3 Electron-deficient (localized tricentric bielectronic) metal–carbon bonds — 8
 - 2.4 Delocalized bonds in polynuclear systems — 8
 - 2.5 Sigma donor– π -acceptor dative bonds — 9
 - 2.6 π -Bonding of unsaturated molecules to transition metal atoms — 10
 - 2.7 Carbenes, carbynes, carbones, and carbides — 12
 - 2.7.1 Carbenes — 12
 - 2.7.2 Carbynes — 13
 - 2.7.3 Carbones — 13
 - 2.7.4 Carbides — 14
 - Further reading — 15
 - References — 16
- 3 Supramolecular organometallic association — 19**
 - Further reading — 22
- 4 Inverse organometallic compounds — 23**
 - References — 25

Part II: Organometallic compounds of main group metals

- 5 Organometallic compounds of group 1 (alkali metals) — 29**
 - 5.1 Organolithium compounds — 29
 - 5.2 Organometallic derivatives of sodium and heavier alkali metals — 30
 - Further reading — 32
 - Reference — 32

6 Organometallic compounds of group 2 metals (rare earths) — 33

- 6.1 Organoberyllium compounds — 34
 - 6.1.1 Homoleptic compounds BeR_2 — 34
 - 6.1.2 Hypervalent species $[\text{BeR}_3]^-$ and $[\text{BeR}_4]^{2-}$ — 35
 - 6.1.3 Diorganoberyllium donor adducts $\text{R}_2\text{Be}\cdot\text{D}$ — 36
 - 6.1.4 Organoberyllium halides, RBeX — 36
 - 6.1.5 Functional organoberyllium compounds, RBeX — 37
 - Further reading — 37
- 6.2 Organomagnesium compounds — 37
 - 6.2.1 Homoleptic compounds, MgR_2 — 38
 - 6.2.2 Hypervalent anions $[\text{MgR}_3]^-$ — 38
 - 6.2.3 Subvalent cations $[\text{RMg}]^+$ — 38
 - 6.2.4 Organomagnesium donor adducts $\text{MgR}_2\cdot\text{D}$ — 38
 - 6.2.5 Inverse organomagnesium compounds — 39
 - 6.2.6 Organomagnesium halides — 39
 - 6.2.7 Functional organomagnesium compounds RMgX — 40
 - Further reading — 40
- 6.3 Organometallic compounds of calcium — 41
 - 6.3.1 Homoleptic CaR_2 compounds — 41
 - 6.3.2 Hypervalent $[\text{CaR}_3]^-$ anions — 41
 - 6.3.3 Other organocalcium compounds — 42
- 6.4 Organostrontium and -barium compounds — 43
 - Further reading — 44
 - References — 44

7 Organometallic compounds of group 13 metals — 47

- 7.1 Organoaluminum compounds — 47
 - 7.1.1 Homoleptic compounds, AlR_3 — 47
 - 7.1.2 Hypervalent species (anions), $[\text{AlR}_4]^-$ — 50
 - 7.1.3 Subvalent cations, $[\text{MR}_2]^+$ — 50
 - 7.1.4 Triorganoaluminum donor adducts, $\text{AlR}_3\cdot\text{D}$ — 50
 - 7.1.5 Inverse organoaluminum compounds — 52
 - 7.1.6 Organoaluminum inverse coordination complexes — 53
 - 7.1.7 Organoaluminum R_2AlH hydrides — 54
 - 7.1.8 Organoaluminum R_2AlX halides — 54
 - 7.1.9 Organoaluminum functional derivatives (alkoxides, thiolates and amides) — 55
 - 7.1.10 Compounds with Al–Al bonds — 56
- 7.2 Organogallium compounds — 56
 - 7.2.1 Homoleptic derivatives, GaR_3 — 56
 - 7.2.2 Hypervalent anions — 57
 - 7.2.3 Subvalent cations — 58

7.2.4	Inverse organogallium compounds —	59
7.2.5	Diorganogallium halides, R_2GaX —	59
7.2.6	Diorganogallium hydroxides, R_2GaOH —	60
7.2.7	Diorganogallium functional derivatives —	60
7.2.8	Organogallium inverse coordination complexes —	60
7.3	Organoindium compounds —	61
7.3.1	Homoleptic compounds, InR_3 —	61
7.3.2	Diorganoindium halides, R_2InX —	61
7.3.3	Functional diorganoindium derivatives —	62
7.4	Organothallium compounds —	62
7.4.1	Homoleptic derivatives, TlR_3 —	63
7.4.2	Monovalent organothallium compounds, TlR —	64
7.4.3	Diorganothallium halides, R_2TlX —	64
7.4.4	Functional diorganothallium compounds, R_2TlX' —	64
7.4.5	Functional monoorganothallium compounds, $RTlX_2$ —	65
	Further reading —	65
	References —	65
8	Organometallic compounds of group 14 metals —	69
8.1	Organotin compounds —	69
8.1.1	Homoleptic species —	70
8.1.2	Hypervalent penta- and hexa-organotin compounds —	71
8.1.3	Diorganotin species —	72
8.1.4	Tin π -complexes —	74
8.1.5	Inverse organotin compounds —	75
8.1.6	Organotin hydrides, R_nSnH_{4-n} —	76
8.1.7	Organotin halides, R_nSnX_{4-n} —	77
8.1.8	Organostannoxanes (organotin oxides) —	78
8.1.9	Organotin hydroxides, $R_nSn(OH)_{4-n}$ —	79
8.1.10	Organotin alkoxides ($R_nSn(OR')_{4-n}$) and related compounds —	80
8.1.11	Organotin sulfides, selenides and tellurides —	80
8.1.12	Organotin thiolates, $R_nSn(SR')_{4-n}$ —	82
8.1.13	Organotin amino-derivatives, $R_nSn(NR'R'')_{4-n}$ —	82
8.1.14	Organostannazanes —	83
8.1.15	Organotin inverse coordination complexes —	84
8.1.16	Organodi- and poly-stannanes —	89
	Further reading —	95
8.2	Organolead compounds —	96
8.2.1	Homoleptic compounds, PbR_4 —	96
8.2.2	Heterocycles with lead heteroatoms —	97
8.2.3	Subvalent species —	98
8.2.4	Inverse organolead compounds —	98

8.2.5	Organolead halides, R_nPbX_{4-n} —	99
8.2.6	Organolead hydroxides, $R_nPb(OH)_{4-n}$ —	99
8.2.7	Organolead oxides —	100
8.2.8	Organolead alkoxides —	100
8.2.9	Organolead carboxylates, $R_nPb(OCOR')_{4-n}$ —	101
8.2.10	Organolead sulfide —	101
8.2.11	Organolead thiolates $R_nPb(SR')_{4-n}$ —	102
8.2.12	Organolead compounds with Pb–Pb bonds —	102
	References —	103
9	Organometallic compounds of group 15 metals —	109
9.1	Organoantimony compounds —	109
9.1.1	Homoleptic compounds, SbR_3 —	109
9.1.2	Organoantimony heterocycles —	110
9.1.3	Pentavalent SbR_5 compounds —	110
9.1.4	Subvalent stibonium $[Sb^VR_4]^+$ cations —	111
9.1.5	Hypervalent Sb^V anions: hexasubstituted anions, $[SbR_6]^-$ —	112
9.1.6	Inverse organoantimony compounds —	112
9.1.7	Organoantimony(III) halides —	112
9.1.8	Oxygen-containing organoantimony compounds —	116
9.1.9	Sulfur-containing organoantimony compounds —	118
9.1.10	Nitrogen-containing organoantimony compounds —	119
9.1.11	Organoantimony compounds with Sb–Sb bonds —	120
9.1.12	Organoantimony(III) compounds as donor ligands —	124
9.1.13	Organoantimony inverse coordination complexes —	125
	Further reading —	127
9.2	Organobismuth compounds —	127
9.2.1	Homoleptic BiR_3 compounds —	128
9.2.2	Pentaorgano-substituted derivatives, BiR_5 —	128
9.2.3	Subvalent bismuth cations, $[Bi^VR_4]^+$ —	128
9.2.4	Organobismuth halides —	129
9.2.5	Oxygen-containing organobismuth compounds —	130
	References —	130
10	Organometallic compounds of group 12 metals —	137
10.1	Organozinc compounds —	137
10.1.1	Homoleptic compounds, ZnR_2 —	137
10.1.2	Hypervalent anions $[ZnR_3]^-$ and $[ZnR_4]^{2-}$ —	138
10.1.3	Diorganozinc donor adducts, $R_2Zn \cdot D$ —	138
10.1.4	Organozinc hydrides, $RZnH$ —	139
10.1.5	Organozinc halides, $RZnX$ —	140
10.1.6	Organozinc alkoxides —	140

10.1.7	Organozinc amides —	141
10.1.8	Compounds with Zn–Zn bonds —	142
10.1.9	Inverse coordination organozinc complexes —	142
10.2	Organocadmium compounds —	142
10.2.1	Homoleptic compounds, CdR_2 —	143
10.2.2	Hypervalent anions, $[\text{CdR}_3]^-$ —	144
10.2.3	Diorganocadmium donor adducts, $\text{CdR}_2 \cdot \text{D}$ —	145
10.2.4	Organocadmium halides, RCdX —	145
10.2.5	Organocadmium functional compounds, RCdX' —	146
10.3	Organomercury compounds —	146
10.3.1	Homoleptic compounds, HgR_2 —	147
10.3.2	Organomercury heterocycles —	148
10.3.3	Diorganomercury donor adducts, $\text{HgR}_2 \cdot \text{D}$ —	148
10.3.4	Organomercury halides —	149
10.3.5	Organomercury hydroxides, RHgOH —	151
10.3.6	Organomercury alkoxides, $\text{RHg-OR}'$ —	151
10.3.7	Organomercury sulfides —	151
10.3.8	Inverse organomercury compounds —	152
10.3.9	Organomercury inverse coordination complexes —	152
10.3.10	Compounds with Hg–Hg bonds —	153
	References —	153

Part III: Organometallic compounds of transition metals

General — 159

11	Organometallic compounds with two electron ligands —	163
11.1	Metal carbonyls —	163
11.1.1	The structure of metal carbonyls —	164
11.1.2	Preparation of metal carbonyls —	167
11.1.3	Metal–carbonyl anions —	168
11.1.4	Metal–carbonyl cations —	169
11.1.5	Metal carbonyl halides —	170
11.2	Metal thiocarbonyls —	171
11.3	Metal selenocarbonyls —	172
11.4	Metal–isocyanide complexes —	172
11.5	Metal–carbene complexes and related compounds —	174
11.6	Olefinic complexes —	178
11.6.1	Monoolefin complexes —	179
11.6.2	Bis(olefin) complexes —	182
11.6.3	Tris(olefin) and tetrakis(olefin) complexes —	184

11.6.4	Bidentate diolefin complexes —	185
11.6.5	Bridging diolefin complexes —	186
11.6.6	Tridentate olefin complexes —	188
	References —	189
12	Compounds with three-electron ligands —	195
12.1	Allylic complexes and related compounds —	195
12.1.1	Homoleptic allyl metal complexes —	196
12.1.2	Complexes with bridging allylic ligands —	197
12.1.3	Heteroleptic mixed allyl–ligand metal complexes —	197
12.1.4	Allylic fragments in cyclic polyolefins —	202
12.2	Cyclopropenyl complexes —	204
	References —	206
13	Compounds with four-electron ligands —	211
13.1	Butadiene complexes and related compounds —	211
13.2	Cyclobutadiene complexes —	214
13.3	Complexes with cyclic dienes and polyenes —	220
13.3.1	Cyclohexadiene —	220
13.3.2	Cycloheptadiene-1,3 —	221
13.3.3	Cyclooctatriene —	221
13.3.4	Cyclooctatetraene —	222
13.3.5	Complexes with heteroatom molecules as four-electron ligands —	222
13.4	Trimethylenemethyl radical as a four-electron ligand —	223
	References —	224
14	Compounds with five-electron ligands —	225
14.1	Metallocene complexes —	226
14.1.1	Ferrocene —	226
	Further reading —	227
14.1.2	Other metallocenes —	228
14.1.3	Cyclopentadienylmetal carbonyls and carbonyl halides —	232
	References —	235
15	Six-electron ligands —	237
15.1	Homoleptic sandwich complexes —	237
	Further reading —	238
15.2	Heteroleptic, mixed ligand sandwich compounds —	239
15.3	Sandwich η^n -complexes of some heterocyclic ligands —	240

- 16 Complexes with seven-electron ligands — 243**
- 17 Complexes with eight-electron ligands — 245**
 - Reference — 246
- 18 Inverse sandwich complexes — 247**
 - 18.1 Cyclobutadiene center — 247
 - 18.2 Cyclopentadiene center — 247
 - 18.3 Benzene center — 248
 - 18.4 Cyclooctatetraene center — 250
 - 18.5 Fused arene rings as centers — 250
 - References — 252
- 19 Organometallic compounds with σ -transition metal–carbon bonds — 255**
 - 19.1 General — 255
 - 19.2 Homoleptic compounds — 258
 - 19.2.1 Titanium, zirconium, hafnium — 260
 - 19.2.2 Vanadium, niobium, tantalum — 260
 - 19.2.3 Chromium, molybdenum, tungsten — 261
 - 19.2.4 Manganese, technetium, rhenium — 263
 - 19.2.5 Iron, ruthenium, osmium — 263
 - 19.2.6 Cobalt, rhodium, iridium — 263
 - 19.2.7 Nickel, palladium, platinum — 263
 - 19.2.8 Copper, silver, gold — 263
 - 19.3 Heteroleptic compounds — 265
 - 19.3.1 Organometallic halides — 265
 - 19.3.2 Nitrogen donors — 266
 - 19.3.3 Phosphines — 267
 - 19.3.4 Metal carbonyl derivatives, $(\text{CO})_m\text{MR}_n$ — 268
 - 19.3.5 Cyclopentadienylmetal derivatives, $(\eta^5\text{-C}_5\text{H}_5)_m\text{MR}_n$, and cyclopentadienylmetal carbonyl derivatives, $(\eta^5\text{-C}_5\text{H}_5)\text{MR}_n(\text{CO})_m$ — 268
 - 19.3.6 Metallacycles and chelate rings — 271
 - References — 274

Part IV: Application of organometallics in organic synthesis

- 20 Polar organometallics in organic syntheses — 279**
 - 20.1 Reactivity of polar organometallics — 279
 - 20.1.1 General — 279

20.1.2	Ortho-metallation —	281
20.1.3	Organomagnesium reagents —	286
20.1.4	Alkali-metal-mediated reactions —	289
20.1.5	Turbo-Grignard reagents and related salt-supported complexes —	293
20.2	Organotitanium reagents in organic synthesis —	310
20.2.1	Reactivity of organotitanium reagents —	311
20.2.2	Titanium-based reagents for carbonyl methylenation and alkylidenation —	312
	References —	317
21	Transition metal organometallics in organic syntheses —	323
21.1	Specific reaction types involving transition metal organometallics —	323
21.1.1	Oxidative addition–reductive elimination —	323
21.1.2	Migratory insertion and β -hydride elimination —	327
21.1.3	Nucleophilic attack on coordinated substrates —	329
21.2	Carbon–carbon bond formation reactions —	331
21.2.1	Cross-coupling reactions – general —	332
21.2.2	The Kumada–Tamao–Corriu cross-coupling reactions —	333
21.2.3	The Negishi cross-coupling reactions —	337
21.2.4	The Stille cross-coupling reactions —	344
21.2.5	The Suzuki–Miyaura cross-coupling reactions —	347
21.2.6	The Hiyama–Denmark cross-coupling reactions —	349
21.2.7	The Murahashi–Feringa cross-coupling reactions —	353
21.2.8	Sonogashira cross-coupling reactions —	360
21.3	The Mizoroki–Heck reaction —	363
21.4	Hydroformylation —	369
21.4.1	Asymmetric hydroformylation —	373
21.5	Hydrogenation —	375
21.5.1	Asymmetric hydrogenation —	377
21.6	Carbonylation of methanol —	385
21.7	Metathesis reactions —	387
21.7.1	Cross-metathesis (CM) —	389
21.7.2	Ring-closing metathesis (RCM) —	395
21.7.3	Ring-opening metathesis polymerization (ROMP) —	398
21.7.4	Acyclic diene metathesis polymerization (ADMEP) —	401
21.8	Polymerization —	402
	References —	410
