|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| 1. INTRODUCTION .....                                                               | 1   |
| 2. MATHEMATICAL PROBLEMS .....                                                      | 3   |
| 2.1. Problem oriented lessons .....                                                 | 9   |
| 2.2. Definition of the problem .....                                                | 14  |
| 2.3. Mathematical problem .....                                                     | 20  |
| 3. PROBLEM SOLVING IN MATHEMATICS .....                                             | 25  |
| 3.1. Factors of successful problem solving .....                                    | 32  |
| 3.2. Factors of successful solving mathematical problems .....                      | 38  |
| 4. THE IMPORTANCE OF THE ATTITUDES OF TEACHERS<br>AND STUDENTS IN MATHEMATICS ..... | 51  |
| 4.1. Characteristics of attitudes and their formation .....                         | 52  |
| 4.2. Attitudes of teachers and students in mathematics .....                        | 57  |
| 4.3. Measuring the attitudes towards mathematics .....                              | 59  |
| 5. EMPIRICAL PART .....                                                             | 63  |
| 5.1. Problem, objectives and research hypothesis .....                              | 63  |
| 5.2. Instruments for data collection .....                                          | 64  |
| 5.3. Sample of students .....                                                       | 72  |
| 5.4. Data collection process .....                                                  | 72  |
| 5.5. Data processing .....                                                          | 73  |
| 6. RESULTS AND INTERPRETATION .....                                                 | 75  |
| 6.1. Achievements of students in the math test .....                                | 75  |
| 6.2. Students' attitudes towards solving mathematical problems .....                | 78  |
| 6.3. Achievements of students at individual levels of knowledge .....               | 80  |
| 7. CONCLUSIONS .....                                                                | 89  |
| 8. REFERENCES .....                                                                 | 93  |
| 9. APPENDICES .....                                                                 | 105 |
| INDEX .....                                                                         | 113 |
