

Contents

1	The Basic Equations of Atmospheric Motion	1
1.1	Time Derivatives in Fluids	1
1.1.1	The Fluid Description According to Euler and Lagrange	1
1.1.2	The Material Derivative of a Fluid Element	3
1.1.3	The Material Derivative of Volume Integrals	5
1.1.4	Summary	8
1.2	The Equation of Continuity	8
1.2.1	A Eulerian Derivation	8
1.2.2	A Lagrangian Derivation Using the Material Derivative	9
1.2.3	Summary	10
1.3	The Momentum Equation	10
1.3.1	The Volume Forces	10
1.3.2	Surface Forces (1): The Pressure Gradient Force	11
1.3.3	Surface Forces (2): Friction	13
1.3.4	The Total Momentum Equation	18
1.3.5	Summary	18
1.4	The Equations of Motion in a Rotating Frame of Reference	19
1.4.1	The Time Derivative in a Rotating Frame of Reference	19
1.4.2	The Momentum Equation in the Rotating Frame of Reference	20
1.4.3	The Equation of Continuity in the Rotating Frame of Reference	22
1.4.4	Summary	23
1.5	The Equations of Motion on the Sphere	23
1.5.1	Velocity and Material Derivative in Spherical Coordinates	24
1.5.2	The Transformed Equations of Motion	26
1.5.3	Summary	28

1.6	Synoptic Scale Analysis	28
1.6.1	The Geostrophic Equilibrium	29
1.6.2	The Hydrostatic Equilibrium	31
1.6.3	Summary	34
1.7	Recommendations for Further Reading	34
2	Elementary Thermodynamics and Energetics of Dry Air	35
2.1	Fundamentals	35
2.1.1	Thermodynamic Systems	35
2.1.2	Thermodynamic State and Thermodynamic Equilibrium	36
2.1.3	Temperature	37
2.1.4	Equations of State	38
2.1.5	Energy Change of a Thermodynamic System	38
2.1.6	Summary	41
2.2	The Fundamental Laws of Thermodynamics	41
2.2.1	The First Law of Thermodynamics and Internal Energy	42
2.2.2	The Heat Capacities of an Ideal Gas	43
2.2.3	Adiabatic and Isothermal Changes of State of an Ideal Gas	44
2.2.4	The Second Law of Thermodynamics	46
2.2.5	The Carnot Process	50
2.2.6	Entropy as State Variable	52
2.2.7	Entropy and Potential Temperature of Dry Air	57
2.2.8	Summary	59
2.3	The Prognostic Equations for Temperature and Entropy in Dry Air	60
2.3.1	Prediction of Temperature	60
2.3.2	The Prediction of Entropy and Potential Temperature	65
2.3.3	The Equations in a Rotating Frame of Reference	66
2.3.4	Spherical Coordinates	66
2.3.5	Summary	66
2.4	Potential Temperature and Static Stability	67
2.4.1	Stable and Unstable Stratification	67
2.4.2	Buoyancy Oscillations	69
2.4.3	Summary	70
2.5	Recommendations for Further Reading	71
3	Elementary Properties and Applications of the Basic Equations	73
3.1	Summary of the Basic Equations	73
3.2	The Importance of the Basic Equations for Weather Prediction	74
3.3	Conservation Laws	75
3.3.1	Conservation of Energy	75
3.3.2	Conservation of Angular Momentum	77
3.3.3	Summary	79

3.4	The Primitive Equations	80
3.5	The Primitive Equations in Pressure Coordinates	82
3.5.1	Arbitrary Vertical Coordinates	82
3.5.2	Pressure Coordinates	85
3.5.3	Summary	86
3.6	Balanced Flows	87
3.6.1	The Natural Coordinates	87
3.6.2	Geostrophic Flow	89
3.6.3	Inertial Flow	90
3.6.4	Cyclostrophic Flow	91
3.6.5	The Gradient Wind	92
3.6.6	Summary	94
3.7	Thermal Wind	95
3.8	Recommendations for Further Reading	97
4	Vortex Dynamics	99
4.1	Vorticity	99
4.1.1	Relative, Absolute, and Planetary Vorticity	99
4.1.2	Vortex Lines, Vortex Tubes, and Vortex Flux	100
4.1.3	Summary	102
4.2	Circulation	103
4.2.1	Relative and Absolute Circulation	103
4.2.2	The General Circulation Theorem	104
4.2.3	Summary	108
4.3	The Kelvin Theorem	108
4.4	The Vorticity Equation	110
4.4.1	The Derivation	110
4.4.2	Vortex-Tube Stretching and Vortex Tilting	111
4.4.3	Summary of the Impacts on Relative Vorticity	113
4.4.4	The Frozen-In Property of Absolute Vorticity	113
4.4.5	Summary	114
4.5	Potential Vorticity	115
4.5.1	An Algebraic Derivation of the Prognostic Equation for Potential Vorticity	115
4.5.2	A Derivation of Potential-Vorticity Conservation from the General Circulation Theorem	117
4.5.3	Summary	119
4.6	Vortex Dynamics and the Primitive Equations	120
4.6.1	The Primitive Equations in Isentropic Coordinates	120
4.6.2	The Primitive Vorticity Equation in Isentropic Coordinates	123
4.6.3	The Potential Vorticity of the Primitive Equations	125

4.6.4	Flow over a Mountain Ridge	125
4.6.5	Summary	129
4.7	Recommendations for Further Reading.	129
5	The Dynamics of the Shallow-Water Equations.	131
5.1	Derivation of the Equations	131
5.1.1	The Momentum Equation	132
5.1.2	The Continuity Equation	133
5.1.3	Summary	134
5.2	Conservation Properties.	134
5.2.1	Energy Conservation	134
5.2.2	Potential Vorticity.	136
5.2.3	Summary	137
5.3	Quasigeostrophic Dynamics	137
5.3.1	The Tangential β -Plane.	137
5.3.2	Scaling the Shallow-Water Equations on the β -Plane	140
5.3.3	The Quasigeostrophic Approximation: Derivation by Scale Asymptotics.	144
5.3.4	The Quasigeostrophic Approximation: Derivation from the Conservation of Shallow-Water Potential Vorticity	148
5.3.5	Summary	150
5.4	Wave Solutions of the Shallow-Water Equations.	150
5.4.1	Perturbation Approach	151
5.4.2	Waves on the f -Plane.	153
5.4.3	Waves on the β Plane: Quasigeostrophic Rossby Waves	160
5.4.4	Summary	165
5.5	Geostrophic Adjustment.	166
5.5.1	The General Solution of the Linear Shallow-Water Equations on an f Plane.	166
5.5.2	The Adjustment Process.	170
5.5.3	Summary	177
5.6	Recommendations for Further Reading.	177
6	Quasigeostrophic Dynamics of the Stratified Atmosphere	179
6.1	Quasigeostrophic Theory and Its Potential Vorticity	179
6.1.1	Analysis of Momentum and Continuity Equation	179
6.1.2	Analysis of the Entropy Equation	188
6.1.3	Quasigeostrophic Potential Vorticity in the Stratified Atmosphere	191
6.1.4	The Relationship with General Potential Vorticity.	195
6.1.5	Quasigeostrophic Theory in Pressure Coordinates	198
6.1.6	A Quasigeostrophic Two-Layer Model	202
6.1.7	Summary	204

6.2	Quasigeostrophic Energetics of the Stratified Atmosphere	205
6.2.1	The Continuously Stratified Atmosphere	206
6.2.2	The Two-Layer Model	211
6.2.3	Summary	214
6.3	Rossby Waves in the Stratified Atmosphere	214
6.3.1	Rossby Waves in the Two-Layer Model	214
6.3.2	Rossby Waves in an Isothermal Continuously Stratified Atmosphere	221
6.3.3	Summary	222
6.4	Baroclinic Instability	223
6.4.1	Baroclinic Instability in the Two-Layer Model	224
6.4.2	Baroclinic Instability in a Continuously Stratified Atmosphere	236
6.4.3	Summary	246
6.5	Recommendations for Further Reading	248
7	The Planetary Boundary Layer	249
7.1	Anelastics and the Boussinesq Theory	250
7.1.1	The Anelastic Equations	250
7.1.2	The Boussinesq Equations	253
7.1.3	Summary	255
7.2	Instabilities in the Boundary Layer	256
7.2.1	The Taylor–Goldstein Equation	256
7.2.2	Neutral Stratification ($N^2 = 0$)	258
7.2.3	No Shear ($d\bar{u}/dz = 0$) and Constant Stratification N^2	264
7.2.4	The General Case: The Richardson Criterion of Howard and Miles	266
7.2.5	Summary	268
7.3	The Averaged Equations of Motion	269
7.3.1	Turbulence and Mean Flow	269
7.3.2	The Reynolds Equations	271
7.3.3	Summary	272
7.4	Gradient Ansatz and Mixing Length	273
7.5	The Turbulent Kinetic Energy	275
7.5.1	The Prognostic Equation	275
7.5.2	Sources and Sinks	278
7.5.3	Summary	280
7.6	The Prandtl Layer	281
7.6.1	The Momentum Flux	281
7.6.2	The Wind Profile	282
7.6.3	The Influence of Stratification	283
7.6.4	Summary	285

7.7	The Ekman Layer.	286
7.7.1	The Ekman-Spiral	288
7.7.2	Ekman Pumping.	296
7.7.3	Summary	298
7.8	Recommendations for Further Reading.	299
8	The Interaction Between Rossby Waves and the Mean Flow	301
8.1	Basics of Quasigeostrophic Theory	302
8.1.1	The Governing Equations.	302
8.1.2	Conservation Properties	304
8.1.3	The Quasigeostrophic Enstrophy Equation Within Linear Dynamics	305
8.1.4	Summary	306
8.2	Rossby-Wave Propagation	306
8.2.1	Wave Propagation Within WKB Theory	307
8.2.2	Rossby-Wave Propagation into the Stratosphere	313
8.2.3	Summary	316
8.3	The Eliassen–Palm Flux.	317
8.3.1	Definition	318
8.3.2	The Eliassen–Palm Relationship	319
8.3.3	Wave Action and Eliassen–Palm Flux Within WKB Theory	320
8.3.4	Summary	324
8.4	The Transformed Eulerian Mean (TEM).	324
8.4.1	The TEM in the Context of Quasigeostrophy	325
8.4.2	The Mass-Weighted Circulation in Isentropic Coordinates	332
8.4.3	The Relation Between the Residual Circulation and the Mass-Weighted Circulation.	334
8.4.4	Summary	337
8.5	The Non-acceleration Theorem	339
8.6	Recommendations for Further Reading.	342
9	The Meridional Circulation	343
9.1	Some Essentials of the Empirical Basis.	343
9.2	The Hadley Circulation	344
9.2.1	The Basic Equations of a Model Without Wave Driving.	344
9.2.2	A Solution Without Meridional Circulation.	348
9.2.3	Hide’s Theorem	350
9.2.4	A Simplified Description of the Hadley Cell.	353
9.2.5	The Summer–Winter Asymmetry	364
9.2.6	The Wave-Driven Hadley Circulation	367
9.2.7	Summary	376

9.3	The Circulation in the Midlatitudes	377
9.3.1	The Phenomenology of the Ferrel Cell	377
9.3.2	Eddy Fluxes and Barotropic Jet Stream	380
9.3.3	A Two-Layer Model	388
9.3.4	The Continuously Stratified Atmosphere	400
9.3.5	Summary	404
9.4	Recommendations for Further Reading	405
10	Gravity Waves and Their Impact on the Atmospheric Flow	407
10.1	Some Empirical Facts	407
10.2	The Fundamental Wave Modes of an Atmosphere at Rest	409
10.2.1	Equations of Motion and Energetics	410
10.2.2	Free Waves on the f -Plane in an Isothermal Atmosphere	414
10.2.3	Summary	429
10.3	The Interaction Between Mesoscale Gravity Waves and a Synoptic-Scale Flow	431
10.3.1	A Reformulation of the Dynamical Equations	431
10.3.2	Scaling for Synoptic-Scale Flow and for Inertia-Gravity Waves	432
10.3.3	Non-dimensional Equations and WKB Ansatz	442
10.3.4	Leading-Order Results: Equilibria, Dispersion and Polarization Relations, Eikonal Equations	447
10.3.5	The Next Order of the Equations	460
10.3.6	Wave Action	466
10.3.7	Wave Impact on the Synoptic-Scale Flow	476
10.3.8	Generalization to Gravity-Wave Spectra: Phase-Space Wave-Action Density	480
10.3.9	Conservation Properties	483
10.3.10	Summary	488
10.4	Critical Levels and Reflecting Levels	490
10.4.1	Critical Levels	490
10.4.2	Reflecting Levels	494
10.4.3	Summary	495
10.5	The Middle-Atmosphere Gravity-Wave Impact	496
10.5.1	Extension of the TEM by Gravity-Wave Effects	497
10.5.2	The Gravity-Wave Effect on the Residual Circulation and on the Zonal-Mean Flow	500
10.5.3	Summary	504
10.6	References and Recommendations for Further Reading	504

11	Appendices	507
11.1	Appendix A: Useful Elements of Vector Analysis	507
11.1.1	The Gradient	507
11.1.2	The Divergence and the Integral Theorem from Gauss	507
11.1.3	The Curl and the Integral Theorem from Stokes	508
11.1.4	Some Identities	508
11.1.5	Recommendations for Further Reading	509
11.2	Appendix B: Rotations	509
11.2.1	Recommendations for Further Reading	512
11.3	Appendix C: Isotropic Tensors	512
11.3.1	Isotropic Tensors of Rank One	513
11.3.2	Isotropic Tensors of Rank Two	513
11.3.3	Isotropic Tensors of Rank Three	514
11.3.4	Isotropic Tensors of Rank Four	515
11.3.5	Recommendations for Further Reading	517
11.4	Appendix D: Spherical Coordinates	517
11.4.1	The Local Basis Vectors	517
11.4.2	The Gradient in Spherical Coordinates	518
11.4.3	The Divergence in Spherical Coordinates	519
11.4.4	The Curl in Spherical Coordinates	521
11.4.5	Recommendations for Further Reading	523
11.5	Appendix E: Fourier Integrals and Fourier Series	523
11.5.1	Fourier Integrals	523
11.5.2	Fourier Series	525
11.5.3	Recommendations for Further Reading	527
11.6	Appendix F: Zonally Symmetric Rossby Waves in the Quasigeostrophic Two-Layer Model	527
11.7	Appendix G: Explicit Solution of the Initial-Value Problem of Baroclinic Instability in a Quasigeostrophic Two-Layer Model	528
11.8	Appendix H: Polarization Relations of the Geostrophic Mode and all f -Plane Modes Without Buoyancy Oscillations	529
11.9	Appendix I: The Higher Harmonics of a Gravity-Wave Field in WKB Theory	532
11.9.1	Leading-Order Results	533
11.9.2	Next-Order Results	536
11.9.3	Recommendations for Further Reading	539
	Literature	541
	Index	547
