1	Introduction	1
1.1	Examples of Applications	5
1.2	First Steps	13
1.2.1	Univariate Distributions of the Variables	13
1.2.2	Graphical Association Analysis	14
1.3	Notational Remarks	21
2	Regression Models	23
2.1	Introduction	23
2.2	Linear Regression Models	24
2.2.1	Simple Linear Regression Model	24
2.2.2	Multiple Linear Regression	28
2.3	Regression with Binary Response Variables: The Logit Model	35
2.4	Mixed Models	40
2.5	Simple Nonparametric Regression	46
2.6	Additive Models	51
2.7	Generalized Additive Models	54
2.8	Geoadditive Regression	57
2.9	Regression Models with Functional Covariates	60
2.10	Distributional Regression	62
2.10.1	Regression Models for Location, Scale, and Shape	63
2.10.2	Quantile Regression	66
2.10.3	Hazard Regression Models	68
2.11	Regression Models and Machine Learning	71
2.11.1	Trees and Random Forests	72
2.11.2	Neural Networks and Deep Learning	75
2.12	Models in a Nutshell	79
2.12.1	Linear Models (LMs, Chaps. 3 and 4)	80
2.12.2	Logit Model (Chap. 5)	80
2.12.3	Poisson Regression (Chap. 5)	80
2.12.4	Generalized Linear Models (GLMs, Chaps. 5 and 6)	81

2.12.5	Linear Mixed Models (LMMs, Chap. 7)	81
2.12.6	Additive Models and Extensions (AMs, Chaps. 8 and 9)	82
2.12.7	Generalized Additive (Mixed) Models (GA(M)Ms, Chap. 9)	82
2.12.8	Structured Additive Regression (STAR, Chap. 9)	83
2.12.9	Quantile Regression (Chap. 10)	83
2.12.10	GAMLSS (Chap. 10)	84
3	The Classical Linear Model	85
3.1	Model Definition	85
3.1.1	Model Parameters, Estimation, and Residuals	89
3.1.2	Discussion of Model Assumptions	90
3.1.3	Modeling the Effects of Covariates	98
3.2	Parameter Estimation	117
3.2.1	Estimation of Regression Coefficients	117
3.2.2	Estimation of the Error Variance	120
3.2.3	Properties of the Estimators	122
3.3	Hypothesis Testing and Confidence Intervals	139
3.3.1	Exact F-Test	142
3.3.2	Confidence Regions and Prediction Intervals	149
3.4	Model Choice and Variable Selection	154
3.4.1	Effect of Model Specification on Bias, Variance, and Prediction Quality	157
3.4.2	Model Choice Criteria	161
3.4.3	Practical Use of Model Choice Criteria	165
3.4.4	Model Diagnosis	170
3.5	Bibliographic Notes and Proofs	184
3.5.1	Bibliographic Notes	184
3.5.2	Proofs	185
4	Extensions of the Classical Linear Model	191
4.1	The General Linear Model	191
4.1.1	Model Definition	192
4.1.2	Weighted Least Squares	193
4.1.3	Heteroscedastic Errors	197
4.1.4	Autocorrelated Errors	206
4.2	Regularization Techniques	216
4.2.1	Statistical Regularization	216
4.2.2	Ridge Regression	217
4.2.3	Least Absolute Shrinkage and Selection Operator	222
4.2.4	Geometric Properties of Regularized Estimates	227

4.2.5	Partial Regularization	231
4.3	Boosting Linear Regression Models	231
4.3.1	Basic Principles	232
4.3.2	Componentwise Boosting	233
4.3.3	Generic Componentwise Boosting	237
4.4	Bayesian Linear Models	241
4.4.1	Standard Conjugate Analysis	241
4.4.2	Regularization Priors	251
4.4.3	Classical Bayesian Model Choice (and Beyond)	257
4.4.4	Spike and Slab Priors	267
4.5	Bibliographic Notes and Proofs	272
4.5.1	Bibliographic Notes	272
4.5.2	Proofs	273
5	Generalized Linear Models	283
5.1	Binary Regression	284
5.1.1	Binary Regression Models	284
5.1.2	Maximum Likelihood Estimation	293
5.1.3	Testing Linear Hypotheses	300
5.1.4	Criteria for Model Fit and Model Choice	301
5.1.5	Estimation of the Overdispersion Parameter	307
5.2	Count Data Regression	308
5.2.1	Models for Count Data	308
5.2.2	Estimation and Testing: Likelihood Inference	310
5.2.3	Criteria for Model Fit and Model Choice	312
5.2.4	Estimation of the Overdispersion Parameter	312
5.3	Models for Nonnegative Continuous Response Variables	314
5.4	Generalized Linear Models	316
5.4.1	General Model Definition	316
5.4.2	Likelihood Inference	320
5.5	Quasi-likelihood Models	325
5.6	Bayesian Generalized Linear Models	327
5.6.1	Posterior Mode Estimation	329
5.6.2	Fully Bayesian Inference via MCMC Simulation Techniques	330
5.6.3	MCMC-Based Inference Using Data Augmentation	332
5.7	Regularization and Boosting in Generalized Linear Models	335
5.8	Bibliographic Notes and Proofs	337
5.8.1	Bibliographic Notes	337
5.8.2	Proofs	339
6	Categorical Regression Models	343
6.1	Introduction	343
6.2	Models for Unordered Categories	347

6.3	Ordinal Models	352
6.3.1	The Cumulative Model	352
6.3.2	The Sequential Model	358
6.4	Estimation and Testing: Likelihood Inference	362
6.5	Bibliographic Notes	366
7	Mixed Models	367
7.1	Linear Mixed Models for Longitudinal and Clustered Data	368
7.1.1	Random Intercept Models	368
7.1.2	Random Coefficient or Slope Models	375
7.1.3	General Model Definition and Matrix Notation	379
7.1.4	Conditional and Marginal Formulation	382
7.1.5	Stochastic Covariates	383
7.2	General Linear Mixed Models	385
7.3	Likelihood Inference in LMMs	388
7.3.1	Known Variance–Covariance Parameters	389
7.3.2	Unknown Variance–Covariance Parameters	390
7.3.3	Variability of Fixed and Random Effects Estimators	396
7.3.4	Testing Hypotheses	397
7.4	Bayesian Linear Mixed Models	400
7.4.1	Estimation for Known Covariance Structure	401
7.4.2	Estimation for Unknown Covariance Structure	402
7.5	Generalized Linear Mixed Models	406
7.5.1	GLMMs for Longitudinal and Clustered Data	406
7.5.2	Conditional and Marginal Models	410
7.5.3	GLMMs in General Form	411
7.6	Likelihood and Bayesian Inference in GLMMs	411
7.6.1	Penalized Likelihood and Empirical Bayes Estimation	412
7.6.2	Fully Bayesian Inference Using MCMC	415
7.7	Practical Application of Mixed Models	418
7.7.1	General Guidelines and Recommendations	418
7.7.2	Case Study on Sales of Orange Juice	420
7.8	Bibliographic Notes and Proofs	426
7.8.1	Bibliographic Notes	426
7.8.2	Proofs	428
8	Nonparametric Regression	431
8.1	Univariate Smoothing	433
8.1.1	Polynomial Splines	434
8.1.2	Penalized Splines (P-Splines)	449
8.1.3	General Penalization Approaches	465
8.1.4	Smoothing Splines	467
8.1.5	Random Walks and State-Space Models	471

8.1.6	Kriging	472
8.1.7	Local Smoothing Procedures	479
8.1.8	General Scatter Plot Smoothing	487
8.1.9	Choosing the Smoothing Parameter	498
8.1.10	Adaptive Smoothing Approaches	509
8.2	Bivariate and Spatial Smoothing	519
8.2.1	Tensor Product P-Splines	523
8.2.2	Radial Basis Functions and Thin Plate Splines	532
8.2.3	Kriging: Spatial Smoothing with Continuous Location Variables	535
8.2.4	Markov Random Fields: Spatial Smoothing with Discrete Location Variables	541
8.2.5	Summary of Roughness Penalty Approaches	548
8.2.6	Local and Adaptive Smoothing	549
8.3	Higher-Dimensional Smoothing	550
8.4	Bibliographic Notes	551
9	Structured Additive Regression	555
9.1	Additive Models	556
9.2	Geoadditive Regression	561
9.3	Models with Interactions	564
9.3.1	Varying Coefficient Models	564
9.3.2	Interactions Between Two Continuous Covariates	567
9.4	Additive Mixed Models	570
9.5	Structured Additive Regression	573
9.6	Inference	581
9.6.1	Penalized Least Squares and Penalized Likelihood Estimation	581
9.6.2	Empirical Bayes Inference Based on Mixed Model Representation	588
9.6.3	Fully Bayesian Inference Based on MCMC	593
9.6.4	Boosting STAR Models	598
9.7	Case Study: Malnutrition in Zambia	602
9.7.1	General Guidelines	602
9.7.2	Descriptive Analysis	606
9.7.3	Modeling Variants	608
9.7.4	Estimation Results and Model Evaluation	610
9.7.5	Automatic Function Selection	615
9.8	Bibliographic Notes	621
10	Distributional Regression Models	623
10.1	Quantile Regression	625
10.1.1	Quantiles	625
10.1.2	Linear Quantile Regression	627

10.1.3	Bayesian Quantile Regression	634
10.1.4	Additive Quantile Regression	637
10.2	Generalized Additive Models for Location, Scale and Shape	641
10.2.1	Heteroscedastic Normal Models	641
10.2.2	General Model Specification	644
10.2.3	Inference	649
10.2.4	Multivariate GAMLSS and Copula Regression	650
10.3	Other Distributional Regression Approaches	654
10.3.1	Expectile Regression	655
10.3.2	Conditional Transformation Models	657
10.3.3	Hazard Regression Models	658
10.4	Bibliographic Notes and Proofs	660
10.4.1	Bibliographic Notes	660
10.4.2	Proofs	661
	Matrix Algebra	665
	Probability Calculus and Statistical Inference.	683
	Index	737
