Preface *xiii*

1	Introduction	1
	<i>Gongping Liu and Wanqin Jin</i>	
	References	2
2	Fabrication Methods for 2D Membranes	3
	<i>Long Cheng, Gongping Liu, and Wanqin Jin</i>	
2.1	Introduction	3
2.2	Synthesis of Nanosheets	4
2.2.1	Top-Down Method	4
2.2.1.1	Mechanical-Force Exfoliation	4
2.2.1.2	Ion-Intercalation Exfoliation	6
2.2.1.3	Oxidation-Assisted Exfoliation	7
2.2.1.4	Selective-Etching Method	8
2.2.2	Bottom-Up Method	9
2.2.2.1	Chemical Vapor Deposition	9
2.2.2.2	Hydro/Solvothermal Synthesis	10
2.2.2.3	Interfacial Synthesis	10
2.3	Membrane Structures and Fabrication Methods	11
2.3.1	Two-Dimensional-Material Nanosheet Membranes	11
2.3.1.1	Zeolite Membrane	11
2.3.1.2	MOF Membrane	12
2.3.1.3	Porous Graphene Membrane	13
2.3.2	Two-Dimensional-Material Laminar Membranes	15
2.3.2.1	Assembly Strategies of Laminates	15
2.3.2.2	Nanostructure Controlling of Laminar Membranes	18
2.3.3	Two-Dimensional-Materials-Based Mixed-Matrix Membranes (MMMs)	24
2.3.3.1	Fabrication Methods of MMMs	24
2.3.3.2	Effect of Physicochemical Properties of 2D Fillers	25
2.3.4	Other Hybrid Membranes	27
2.4	Summary and Outlook	29
	References	30

3	Nanoporous Single-Layer Graphene Membranes for Gas Separation	35
	<i>Luc Bondaz, Shiqi Huang, Mojtaba Rezaei, Shaoxian Li, and Kumar Varoon Agrawal</i>	
3.1	Introduction	35
3.2	Gas-Separation Potential of N-SLG Membranes	37
3.3	Engineering Gas-Selective Vacancy Defects	48
3.3.1	Bottom-Up Synthesis of N-SLG	49
3.3.2	Postsynthetic Etching of SLG	51
3.3.2.1	Physical Etching Methods	52
3.3.2.2	Chemical Etching Techniques	55
3.4	Fabrication of Large-Area N-SLG Membranes	66
3.5	Summary and Outlook	71
	References	72
4	Graphene-Based Membranes for Water Separation	83
	<i>Yuan Kang and Xiwang Zhang</i>	
4.1	Introduction	83
4.2	Water Transport Mechanisms in Graphene-Based Membranes	84
4.2.1	Internal-Geometry-Mediated Transport	84
4.2.1.1	Size Effects	85
4.2.1.2	Length Effects	87
4.2.2	Surface-Chemistry-Mediated Transport	88
4.2.3	External-Environment-Mediated Transport	91
4.2.3.1	Solution Chemistry Effects	91
4.2.3.2	Applied Pressure Effects	93
4.2.3.3	Applied Potential Effects	93
4.2.4	Guest-Material-Mediated Transport	94
4.2.4.1	Stabilizing Effects	94
4.2.4.2	Size-Controlling Effects	96
4.2.4.3	Surface-Chemistry-Modifying Effects	96
4.2.4.4	Smart Gating Effects	97
4.3	Graphene-based Membrane Water Separation Applications	100
4.3.1	Nanofiltration	100
4.3.2	Reverse Osmosis	105
4.3.3	Forward Osmosis	105
4.4	Conclusions and Perspectives	107
	References	108
5	Graphene-Based Membranes for Ions Separation	113
	<i>Guoke Zhao and Hongwei Zhu</i>	
5.1	Introduction	113
5.2	Single-Layer Graphene	114
5.2.1	Theoretical Calculations	115
5.2.2	Experimental Validations	118

5.3	Graphene Oxide Membranes	120
5.3.1	Structure of Graphene Oxide and Graphene Oxide Membranes	121
5.3.2	Ultrafast Water Permeability	121
5.3.3	Ion Selectivity	123
5.3.4	Microstructure Optimization for Desalination	124
5.3.5	Interlayer Spacing Control for Desalination	126
5.3.5.1	Cross-Linking	126
5.3.5.2	Reduction	130
5.3.5.3	External Pressure	131
5.3.6	Charge Modification for Desalination	132
5.3.7	External Field Modulated Ion Transport	134
5.3.8	Ion Transport Through Planar GO Laminates	135
5.4	Summary and Perspective	137
	References	139
6	Graphene-Based Membranes for Pervaporation	145
	<i>Jing Zhao and Wanqin Jin</i>	
6.1	Introduction	145
6.2	Mass-Transport Mechanism	146
6.2.1	Mass Transport in Pervaporation Process	146
6.2.2	Mass Transport in GO Membrane	147
6.3	Progresses in GO Membranes for Pervaporation	150
6.3.1	Controlling Self-Assembly Condition	151
6.3.2	Designing Graphene Oxide-Framework (GOF) Membrane	152
6.3.3	Assembly with Polymers	157
6.3.4	Intercalating Nanomaterials	162
6.3.5	Tuning Surface Structure	163
6.4	Summary and Perspective	165
	References	167
7	Two-Dimensional-Materials Membranes for Gas Separations	173
	<i>Yunpan Ying, Hadi Rouhani, Dechao Wang, and Dan Zhao</i>	
7.1	Introduction	173
7.2	2D-Materials Membranes	174
7.2.1	Zeolites	174
7.2.2	Graphene-Based Materials	176
7.2.2.1	Nanoporous Graphene	176
7.2.2.2	Graphene Oxide	179
7.2.3	MOFs	181
7.2.4	COFs	183
7.2.5	g-C ₃ N ₄	185
7.2.6	MXenes	185
7.2.7	Other 2D Materials	188
7.3	Preparation of 2D Nanosheets	190

7.3.1	Top-Down Method	190
7.3.2	Bottom-Up Method	194
7.4	Preparation of 2D-Materials Membranes	196
7.4.1	Top-Down Method	196
7.4.1.1	Filtration-Assisted Assembly	196
7.4.1.2	Coating	198
7.4.1.3	Layer-by-Layer Assembly	199
7.4.2	Bottom-Up Method	199
7.5	Gas Separations	201
7.5.1	H ₂ /CO ₂ , H ₂ /N ₂ , and H ₂ /CH ₄ Separations	201
7.5.2	CO ₂ /N ₂ and CO ₂ /CH ₄ Separations	201
7.5.3	Other Gas/Vapor Separations	210
7.6	Conclusions and Perspectives	210
	References	211

8 Layered Double Hydroxide Membranes for Versatile Separation Applications 221

Yi Liu

8.1	Introduction on LDHs and LDH-Based Membranes	221
8.2	Strategy for LDH-Based Membrane Preparation	223
8.2.1	Solution-Based <i>In Situ</i> Growth	223
8.2.2	Post-Synthetic Deposition	224
8.2.3	Blending with Polymers	226
8.3	Research Progress on LDH-Based Membranes	226
8.3.1	Interlayer Gallery-Based Separation	226
8.3.1.1	Pristine Interlayer Gallery-Based Separation	226
8.3.1.2	Regenerated Interlayer Gallery-Based Separation	229
8.3.2	Geometric Shape-Based Separation	232
8.3.2.1	Geometric Shape-Based Gas Separation	232
8.3.2.2	Geometric Shape-Based Liquid Separation	234
8.3.2.3	Geometric Shape-Based Particulate Matter Capture	236
8.3.2.4	Geometric Shape-Based Sacrificing Templates	236
8.3.3	Unusual Thermal Behavior-Based Separation	236
8.3.4	Photocatalytic Activity-Based Separation	238
8.3.5	Positive Surface Charge-Based Separation	238
8.3.5.1	Positive Surface Charge-Based Ultrafiltration	239
8.3.5.2	Positive Surface Charge-Based Nanofiltration	239
8.3.5.3	Positive Surface Charge-Based Reverse Osmosis	240
8.3.5.4	Positive Surface Charge-Based Forward Osmosis	241
8.3.5.5	Positive Surface Charge-Based Nanocomposite Membranes	241
8.3.6	Hydrophilicity-Based Water Treatment	242
8.3.6.1	Hydrophilicity-Based Microfiltration	243
8.3.6.2	Hydrophilicity-Based Ultrafiltration	243

- 8.3.6.3 Hydrophilicity-Based Nanofiltration 243
- 8.3.6.4 Hydrophilicity-Based Reverse Osmosis 244
- 8.3.6.5 Hydrophilicity-Based Forward Osmosis 244
- 8.4 Summary and Outlook 245
- References 246

9 MXene: A Novel Two-Dimensional Membrane Material for Molecular Separation 253

Guozhen Liu, Gongping Liu, and Wanqin Jin

- 9.1 Introduction 253
- 9.2 Synthesis and Processing 254
 - 9.2.1 Synthesis of Multilayered MXene Phases 254
 - 9.2.2 Fabrication of Single MXene Flakes 255
 - 9.2.3 Surface Properties of MXene Flakes 257
 - 9.2.4 Preparation of MXene-Based Membranes 257
 - 9.2.4.1 Drop-Coating 258
 - 9.2.4.2 Spraying or Spinning Coating 258
 - 9.2.4.3 Pressure-Assisted Filtration 258
- 9.3 MXene-Based Membranes for Molecular Separation 258
 - 9.3.1 Liquid Separation 258
 - 9.3.1.1 Desalination 259
 - 9.3.1.2 Organic Solvent Nanofiltration 261
 - 9.3.1.3 Pervaporation Solvent Dehydration 263
 - 9.3.1.4 Dyes and Natural Organic Matter Rejection 265
 - 9.3.1.5 Oil–Water Separation 267
 - 9.3.2 Gas Separation 268
- 9.4 Conclusions and Perspective 271
- References 271

10 2D-Materials Mixed-Matrix Membranes 279

Ziting Zhu, Shaoyu Wang, Fusheng Pan, and Zhongyi Jiang

- 10.1 Introduction 279
- 10.2 Two-Dimensional Materials as Dispersed Phase of MMMs 281
 - 10.2.1 Graphene Oxide (GO) 282
 - 10.2.1.1 Increasing Molecular Transport Channels 282
 - 10.2.1.2 Reducing Nonselective Defects 283
 - 10.2.1.3 Introducing the Functional Sites for Facilitated Transport 284
 - 10.2.2 Metal–Organic Frameworks (MOFs) 285
 - 10.2.2.1 Increasing Molecular Transport Channels 286
 - 10.2.2.2 Enhancing the Interfacial Compatibility Between Nanomaterials and Polymers 287
 - 10.2.3 Covalent Organic Frameworks (COFs) 287
 - 10.2.3.1 Increasing Molecule Transport Channels 288

10.2.3.2	Introducing Facilely-Tailored Functionality	289
10.2.3.3	Constructing Hierarchical Structures in MMMs	290
10.2.4	Other 2D Materials	292
10.2.4.1	Transition-Metal Dichalcogenides (TMDs)	292
10.2.4.2	Graphitic Carbon Nitride (g-C ₃ N ₄)	293
10.2.4.3	MXenes	294
10.3	Two-Dimensional Material as Continuous Phase of MMMs	295
10.3.1	Graphene Oxide (GO)	295
10.3.1.1	Controlling Interlayer Spacing	296
10.3.1.2	Modulating the Physical/Chemical Microenvironment	296
10.3.2	Metal–Organic Framework (MOF)	297
10.3.2.1	Enhancing Processability and Stability of MOFs	299
10.3.2.2	Modulating the Physical/Chemical Microenvironment	299
10.3.3	Covalent Organic Frameworks (COFs)	300
10.3.3.1	Regulating the Physical/Chemical Microenvironment	301
10.3.3.2	Modulating Crystallinity, Porosity, Mechanical Properties	302
10.4	Conclusion and Outlook	303
	References	306
11	Transport Mechanism of 2D Membranes	313
	<i>Tae Hoon Lee and Ho Bum Park</i>	
11.1	Introduction	313
11.2	Fundamentals of Mass Transport Through Membranes	316
11.2.1	Transport Mechanism in Porous Membranes	317
11.2.2	Transport Mechanism in Nonporous Membranes	319
11.2.3	Transport Mechanism in Charged Membranes	321
11.2.4	Permeability–Selectivity Trade-Off for Polymers	324
11.3	Nanofluidic Transport Through Confined Dimensions	326
11.3.1	Confinement Architectures for Artificial Nanofluidic Systems	328
11.3.2	Continuum Modeling of Nanofluidic Transport in Confined Channels	330
11.3.3	Mechanisms of Nanofluidic Transport in Atomically Thin Nanopores	333
11.3.4	Effects of Electrical Double Layer in Nanofluidic Ion Transport	335
11.3.5	Various Confinement Effects in Nanofluidic Transport at the Subnanometer Scale	338
11.3.5.1	Molecular Rearrangement	338
11.3.5.2	Partial Dehydration or Desolvation	339
11.3.5.3	Electrical Effects	340
11.3.5.4	Quantum Effects	341
11.4	Unique Mass-Transport Properties in 2D Membranes: Structural Aspects	341
11.4.1	Nanoporous Atomically Thin 2D Membranes (NATMs)	342
11.4.2	Stacked 2D Membranes with Laminar Structure	345
11.4.3	2D Materials-Embedded Mixed-Matrix Membranes (MMMs)	350

11.5	Summary and Outlook	355
	References	356
12	Conclusions and Perspectives	365
	<i>Gongping Liu and Wanqin Jin</i>
