

Contents

1	Introduction	1
1.1	Outline	2
1.2	Notes	5
	References	5
2	Basic Tools in Medical Decision Making	7
2.1	Prevalence, Incidence and Risk	7
2.2	Discriminatory Power and Predictive Values	8
2.3	Probability, Odds and the Likelihood Ratio	11
2.4	Continuous Test Outcomes and Cut-off Values	15
2.5	Notes	19
2.6	Exercises	19
	References	21
3	Basic Tools in Economics: Preferences, Expected Utility, Risk Aversion and Prudence	23
3.1	Preferences and Utility	24
3.2	Decisions Under Uncertainty: Menu of Actions, States of Nature and Consequences	27
3.3	The Elementary Utility Function and the Expected Utility Rule	28
3.4	The Axiom of Independence and the Expected Utility Rule	31
3.5	The QALY Concept	34
3.6	Risk Aversion	37
3.7	Prudence	41
3.8	Medical Decision Making: An Economic Perspective	46
3.9	Non-Expected Utility Theories	47
3.10	Notes	49
3.11	Exercises	49
	References	50

4	Treatment Decisions	53
4.1	The Treatment Decision under Diagnostic Risk	54
4.1.1	The Treatment Threshold	54
4.1.2	The Protective Effect of Treatment	60
4.1.3	Risk Aversion and the Treatment Decision	63
4.1.4	Preventive Treatment	68
4.1.5	Choosing Between Several Treatments	69
4.2	The Treatment Decision Under Therapeutic Risk	71
4.2.1	The Treatment Success Probability Threshold	71
4.2.2	Including the Protective Effect of Treatment	74
4.2.3	The Role of Risk Aversion	75
4.2.4	Choosing Between Several Treatments	77
4.3	The Treatment Decision under Diagnostic and Therapeutic Risk	79
4.4	Notes	83
4.5	Exercises	83
	References	84
5	Test and Treatment Decisions	87
5.1	The Value of Information of a Diagnostic Test	88
5.1.1	The Perfect Test	88
5.1.2	The Imperfect Test	93
5.1.3	Decision Curve Analysis	99
5.1.4	Threshold Analysis with Several Treatment Options	104
5.1.5	Threshold Analysis with a Genetic Test	106
5.2	Risk Attitude and the Test and Test-Treatment Thresholds	109
5.2.1	The Perfect Test	109
5.2.2	The Imperfect Test	112
5.3	Testing Under the Therapeutic Risk	115
5.4	The Test and Test-Treatment Thresholds when both the Diagnostic and the Therapeutic Risk are Present	116
5.5	Potential Harm from a Test	120
5.6	Notes	123
5.7	Exercises	124
	References	126
6	Prudence and Medical Decision Making	127
6.1	Prudence and the Treatment Threshold	128
6.2	Prudence and the Test and Treatment Decisions	133
6.2.1	The Perfect Test	133
6.2.2	The Imperfect Test	136
6.3	Prudence and Protection	140
6.4	Prudence and Prevention	140
6.5	Prudence and the Therapeutic Risk	142

6.6	Notes	143
6.7	Exercises	144
	References	144
7	Optimal Strategy for Multiple Diagnostic Tests	147
7.1	Choosing among Two Tests	148
7.2	Combining Two Tests	155
7.3	Test and Test-Treatment Thresholds for Composite Tests	157
7.4	The Optimal Sequence of and Potential Harm from Testing	164
7.5	Parallel or Sequential Testing?	168
7.6	Notes	169
7.7	Exercises	169
	References	171
8	The Optimal Cutoff of a Diagnostic Test	173
8.1	Endogenous Test Characteristics	174
8.2	The Optimal Cut-Off	177
8.3	Test and Test-Treatment Thresholds and the Optimal Cut-Off	182
8.4	Multiple Tests with Endogenous Sensitivity and Specificity: Triple Test and Amniocentesis	184
8.4.1	The ROC Curve of the Triple Test	185
8.4.2	The Value of Information and Optimal Use of the Triple Test with Amniocentesis	186
8.4.3	Deciding on the Test Outcome	189
8.5	Notes	191
8.6	Exercises	191
	References	192
9	The Total Value of Information of a Test	193
9.1	Exogenous Test Characteristics	194
9.1.1	Performance as a Function of the Prior Probability of Disease	194
9.1.2	Overall Performance	196
9.1.3	A Social Perspective	199
9.2	Endogenous Test Characteristics	200
9.2.1	Performance as a Function of the Prior Probability of Disease	200
9.2.2	Overall Performance	201
9.3	Application to Prenatal Diagnostics	201
9.3.1	Age-Specific Performance	202
9.3.2	Overall Performance	204
9.4	Notes	207
9.5	Exercises	207
	References	208

10	The Economics of Medical Decision Making	209
10.1	Welfarism and Non-Welfarism	210
10.1.1	The QALY Approach	210
10.1.2	The Welfarist Approach	211
10.2	The Diagnostic Risk	214
10.2.1	The Treatment Decision	214
10.2.2	Risk Aversion and the Treatment Decision	215
10.2.3	Prudence and the Treatment Decision	215
10.2.4	Treatment and Testing	216
10.2.5	Treatment and Composite Testing	219
10.3	The Therapeutic Risk	221
10.3.1	Risk Aversion and the Treatment Decision	222
10.4	Treatment Decision with Both Risks	223
10.5	The Effect of Income, Health and Death on the Treatment Decision	224
10.6	Notes	229
10.7	Exercises	230
	References	231
11	Valuing Health and Life	233
11.1	Treatment and Health	234
11.2	Treatment and Survival	240
11.3	The Value of Health and Life	245
11.4	Optimal Allocation of Health Across Individuals	249
11.4.1	The Health Model	250
11.4.2	The Health-Survival Model	253
11.4.3	The QALY Model	255
11.5	Conclusion	257
11.6	Appendix	258
11.7	Notes	259
11.8	Exercises	259
	References	260
12	Revealed Preference in Medical Decisions	261
12.1	The Diagnostic Risk	262
12.1.1	The Pauker–Kassirer Model	262
12.1.2	Adding the Test Option	264
12.1.3	The Protective Effect of Treatment	265
12.1.4	Revealing a Lower Bound on the Value of Life	267
12.2	The Therapeutic Risk	268
12.2.1	The Eeckhoudt Model	268
12.2.2	The Protective Effect of Treatment	269
12.3	Regulation and Revealed Preferences	270
12.3.1	Prenatal Diagnostics	271
12.3.2	PSA Test	272

12.3.3	Primary Prevention of Atherosclerotic Cardiovascular Disease	273
12.3.4	Ventral Hernia Repairs: Laparoscopic or Open?	274
12.4	Notes	276
12.5	Exercises	276
	References	276
13	Imperfect Agency and Non-expected Utility Models	279
13.1	Imperfect Physician Agency	280
13.2	Non-expected Utility Theories Under Risk	283
13.3	Non-expected Utility Theories Under Uncertainty	290
13.4	Conclusion	295
13.5	Notes	296
13.6	Exercises	297
	References	298
	References	301
	Index	311
