Preface — V

1 Structure theory — 1

- 1.1 Solvable Lie groups — 1
 - 1.1.1 Solvable and exponential solvable Lie groups — 1
 - 1.1.2 Heisenberg Lie groups — 5
 - 1.1.3 Threadlike Lie groups — 6
 - 1.1.4 Maximal subgroups of solvable Lie groups — 7
- 1.2 Euclidean motion groups — 10
 - 1.2.1 On orthogonal matrices — 10
 - 1.2.2 Some structure results — 13
 - 1.2.3 Discrete subgroups of $I(n)$ — 15
 - 1.2.4 Closed subgroups of $I(n)$ — 26
- 1.3 Heisenberg motion groups — 35
 - 1.3.1 First preliminary results — 35
 - 1.3.2 Discrete subgroups of Heisenberg motion groups — 36
- 1.4 Syndetic hulls — 43
 - 1.4.1 Existence results for completely solvable Lie groups — 43
 - 1.4.2 Case of exponential Lie groups — 44
 - 1.4.3 Case of reduced exponential Lie groups — 48

2 Proper actions on homogeneous spaces — 51

- 2.1 Proper and fixed-point actions — 51
 - 2.1.1 Discontinuous groups — 52
 - 2.1.2 Clifford–Klein forms — 52
 - 2.1.3 Weak and finite proper actions — 53
 - 2.1.4 Campbell–Baker–Hausdorff series — 56
 - 2.1.5 Proper actions and coexponential bases — 57
- 2.2 Proper actions for 3-step nilpotent Lie groups — 58
- 2.3 Special nilpotent Lie groups — 62
- 2.4 Proper actions on solvable homogeneous spaces — 65
 - 2.4.1 Proper actions on special solvmanifolds — 65
 - 2.4.2 Weak and finite proper actions on solvmanifolds — 67
 - 2.4.3 Proper actions on maximal solvmanifolds — 72
 - 2.4.4 Connected subgroups acting properly on maximal solvmanifolds — 72
 - 2.4.5 From continuous to discrete actions — 74
- 2.5 Proper action for the compact extension $K \ltimes \mathbb{R}^n$ — 78

2.5.1	Criterion for proper action —	80
2.6	Proper actions for Heisenberg motion groups —	84
3	Deformation and moduli spaces —	87
3.1	Deformation and moduli spaces of discontinuous actions —	87
3.1.1	Parameter, deformation and moduli spaces —	87
3.1.2	Case of effective actions —	89
3.1.3	Deformation of (G, X) -structures —	90
3.2	Algebraic characterization of the deformation space —	91
3.2.1	The deformation and moduli spaces in the exponential setting —	91
3.2.2	On pairs (G, H) having Lipsman's property —	96
3.3	Case of Abelian discontinuous groups —	97
3.3.1	Analysis on Grassmannians —	98
3.3.2	The parameter space for normal subgroups —	102
3.3.3	The deformation space for normal subgroups —	103
3.3.4	Examples —	107
3.4	Non-Abelian discontinuous groups —	109
3.4.1	Structure of a principal fiber bundle —	109
3.4.2	The context where $[\Gamma, \Gamma]$ is uniform in $[G, G]$ —	113
4	The deformation space for nilpotent Lie groups —	117
4.1	Deformation and moduli spaces for Heisenberg groups —	117
4.1.1	A criterion of the proper action, continued —	117
4.1.2	The deformation space for non-Abelian actions —	118
4.1.3	Deformation and moduli spaces when H contains the center —	123
4.1.4	The case when H does not meet the center —	125
4.1.5	Case of compact Clifford–Klein forms —	133
4.1.6	Examples —	137
4.1.7	A smooth manifold structure on $\mathcal{T}(\Gamma, H_{2n+1}, H)$ —	140
4.1.8	Proof of Theorem 4.1.26 —	151
4.1.9	From H_{2n+1} to the product group $H_{2n+1} \times H_{2n+1}$ —	152
4.2	Case of 2-step nilpotent Lie groups —	156
4.2.1	Description of the deformation space $\mathcal{T}(\mathfrak{l}, \mathfrak{g}, \mathfrak{h})$ —	159
4.2.2	Decomposition of $\text{Hom}_1(\mathfrak{l}, \mathfrak{g})$ —	160
4.2.3	Hausdorffness of the deformation space —	163
4.3	The 3-step case —	166
4.3.1	Some preliminary results —	166
4.3.2	On the quotient space $\text{Hom}(\mathfrak{l}, \mathfrak{g})/G$ —	170
4.3.3	Description of the parameter and the deformation spaces —	190
4.3.4	Hausdorffness of the deformation space —	195
4.3.5	Illustrating examples —	195
4.4	Deformation space of threadlike nilmanifolds —	200

4.4.1	Description of $\text{Hom}(\mathfrak{l}, \mathfrak{g})$ —	200
4.4.2	Description of the parameter space $\mathcal{R}(\Gamma, G, H)$ —	203
4.4.3	Description of the deformation space $\mathcal{T}(\Gamma, G, H)$ —	207
4.4.4	Case of non-Abelian discontinuous groups —	213
5	Local and strong local rigidity —	225
5.1	The local rigidity conjecture —	226
5.1.1	The concept of (strong) local rigidity —	226
5.1.2	The nilpotent setting —	226
5.1.3	Case of 2-step nilpotent Lie groups —	227
5.1.4	The threadlike case —	228
5.2	Local rigidity for exponential Lie groups —	228
5.2.1	A local rigidity theorem where $[L, L] = [G, G]$ —	230
5.3	Selberg–Weil–Kobayashi local rigidity theorem —	231
5.3.1	Maximal exponential homogeneous spaces —	232
5.3.2	Local rigidity for small-dimensional exponential Lie groups —	236
5.3.3	Passing through the quotients —	238
5.3.4	Proof of Theorem 5.3.9 —	240
5.4	Criteria for local rigidity —	242
5.4.1	Necessary condition for local rigidity using the automorphism group $\text{Aut}(\mathfrak{l})$ —	242
5.4.2	Case of graded Lie subalgebras —	244
5.4.3	Abelian discontinuous groups —	246
5.4.4	Removing the assumption on Γ to admit a syndetic hull —	248
5.4.5	Exponential Lie algebras of type $\mathcal{T}$ —	250
5.5	Local rigidity in the solvable case —	252
5.5.1	The notion of colored discrete subgroups —	253
5.5.2	The rank-one solvable case —	254
5.5.3	The setting where the action of G on G/H is effective —	258
5.5.4	The rank-two case —	260
5.6	The case of Diamond groups —	263
5.6.1	Dilation invariant subgroups —	266
5.6.2	Strong local rigidity results —	270
5.6.3	Proofs of Theorem 5.6.11 and Corollary 5.6.12 —	273
5.7	A local rigidity theorem for finite actions —	274
5.7.1	(Strong) local rigidity for $K \ltimes \mathbb{R}^n$ —	277
5.7.2	(Strong) local rigidity for Heisenberg motion groups —	279
5.7.3	A variant of the local rigidity conjecture —	281
6	Stability concepts and Calabi–Markus phenomenon —	283
6.1	Stability concepts —	284
6.2	Stability of nilmanifold actions —	285

6.2.1	Case of Heisenberg groups — 285
6.2.2	From H_{2n+1} to $H_{2n+1} \times H_{2n+1}/\Delta$ — 287
6.2.3	Case of 2-step nilpotent Lie groups — 292
6.2.4	The threadlike case — 296
6.2.5	Stability of discrete subgroups — 307
6.3	Stability in the exponential setting — 309
6.3.1	Case of general compact Clifford–Klein forms — 309
6.4	Stability for Euclidean motion groups — 311
6.4.1	Geometric stability — 314
6.4.2	Near stability — 315
6.4.3	Case of crystallographic discontinuous groups — 316
6.4.4	Further remarks — 320
6.5	The Calabi–Markus phenomenon — 324
6.5.1	Case of Euclidean motion groups — 324
6.5.2	The case of $SO_n(\mathbb{R}) \ltimes \mathbb{R}^n$ — 327
6.5.3	Case of the semidirect product $K \ltimes \mathbb{R}^n$ — 327
6.5.4	Case of Heisenberg motion groups — 327
6.5.5	Existence of compact Clifford–Klein forms — 328
6.5.6	Concluding remarks — 333
7	Discontinuous actions on reduced nilmanifolds — 335
7.1	Reduced Heisenberg groups — 335
7.1.1	Backgrounds — 335
7.1.2	Discrete subgroups of H_{2n+1}^r — 336
7.1.3	A matrix-like writing of elements of $\text{Hom}(\Gamma, G)$ — 338
7.1.4	Proper action on reduced homogeneous spaces — 346
7.1.5	The parameter space — 347
7.1.6	Stability of discrete subgroups — 348
7.2	From H_{2n+1}^r to $(H_{2n+1}^r \times H_{2n+1}^r)/\Delta$ — 349
7.2.1	Posed problems and main results — 350
7.2.2	Discontinuous groups for $(H_{2n+1}^r \times H_{2n+1}^r)/\Delta$ — 351
7.2.3	The deformation parameters set $\text{Hom}(\Gamma, G)$ — 353
7.2.4	The parameter space — 358
7.2.5	Proof of Theorem 7.2.1 — 359
7.2.6	Proof of Theorem 7.2.2 — 365
7.3	Reduced threadlike groups — 366
7.3.1	Proper action of closed subgroups of G — 367
7.3.2	$\text{Hom}(\Gamma, G)$ for an Abelian discrete subgroup Γ — 369
7.3.3	Parameter and deformation spaces — 379
7.3.4	The local rigidity problem — 390
7.3.5	The stability problem — 391
7.4	A stability theorem for non-Abelian actions — 396

7.4.1	Description of $\text{Hom}(\Gamma, G)$ —	397
7.4.2	Explicit determination of the parameter space —	404
7.4.3	Proof of Theorem 7.4.1 —	406
7.4.4	A concluding remark —	410
8	Deformation of topological modules —	411
8.1	Geometric objects associated with deformed algebras —	412
8.1.1	Topological modules on the ring of formal series —	413
8.1.2	Divisible ideals —	415
8.1.3	Cancelations —	415
8.1.4	Involutivity —	416
8.1.5	Characteristic manifolds —	418
8.1.6	Involution and $*$ -representations —	419
8.1.7	Topologically convergent modules —	422
8.2	Case of linear Poisson manifolds —	422
8.2.1	The algebra $(\mathcal{A}, *)$ —	424
8.2.2	Converging topological free modules on $(\mathcal{A}, *)$ —	425
8.2.3	Unitarity —	426
8.3	The Zariski closure conjecture —	427
8.3.1	Kirillov–Bernat theory for exponential groups —	427
8.3.2	Construction of a representation π_ν of $\mathcal{A}$ —	430
8.3.3	The characteristic variety —	432
8.3.4	Fundamental examples —	433
8.3.5	The Heisenberg groups —	434
8.3.6	The n -step threadlike Lie algebras —	436
8.3.7	The affine group of the real line —	437
8.3.8	A 3-dimensional exponential solvable Lie group —	438
8.3.9	The Zariski closure conjecture —	439
8.3.10	The nilpotent case —	440
8.3.11	First approach to Conjecture 8.3.10 —	440
8.3.12	Partial solution of Conjecture 8.3.10 —	443
8.3.13	The normal polarization case —	445
8.3.14	The nilpotent case revisited —	446
8.3.15	Dixmier and Kirillov maps —	448
8.4	Some nonexponential restrictive cases —	449
8.4.1	The two-dimensional motion group —	449
8.4.2	The diamond groups —	452
8.4.3	The semisimple case: Verma modules —	455
8.5	A deformation approach of the Kirillov map —	459
8.5.1	Poisson ideals —	459
8.6	Type-I-ness and consequences —	462
8.6.1	Linear Poisson manifolds and primitive Poisson ideals —	462

8.6.2	The unitary dual and the orbit space —	463
8.6.3	The Tangent groupoid and Rieffel's strict quantization —	463
8.6.4	One-parameter families of representations —	464
8.6.5	Kirillov map revisited —	470

Bibliography —	473
