

Contents

1	Introduction	1
1.1	The Linear Ordering Problem	1
1.1.1	Applications	3
1.1.2	The LOLIB Library of Benchmark Instances	10
1.2	The Maximum Diversity Problem	15
1.2.1	Diversity measures and models	18
1.2.2	The MDPLIB Library of Benchmark Instances	22
2	Heuristic Methods	27
2.1	Introduction	27
2.1.1	Assessing the Quality of Heuristics	29
2.2	Construction Heuristics	31
2.2.1	Early LOP Methods	32
2.2.2	Reconstruction in the MDP	33
2.2.3	General Insertions	35
2.2.4	Numerical Experiments	36
2.3	Local Search	39
2.3.1	Insertions in permutation problems	39
2.3.2	Exchanges in binary problems	41
2.3.3	LOP methods	42
2.4	Multi-Start Procedures	46
2.4.1	Variants of Multi-Start	46
2.4.2	Numerical Experiments	48
3	Meta-Heuristics	59
3.1	Introduction	59
3.2	GRASP	61
3.2.1	Construction Phase	62
3.2.2	Improvement Phase	68
3.3	Strategic Oscillation and Iterated Greedy	73
3.4	Tabu Search	75

3.4.1	Short Term Memory	76
3.4.2	Long Term Memory	79
3.5	Simulated Annealing	83
3.6	Variable Neighborhood Search	87
3.6.1	VNS implementations for the LOP	88
3.6.2	VNS implementations for the MDP	94
3.7	Scatter Search	95
3.7.1	Reference Set Creation	98
3.7.2	Reference Set Update	101
3.7.3	Reference Set Rebuild	105
3.8	Genetic and Memetic Algorithms	109
3.9	Matheuristics	117
3.10	Experiments with the LOP	117
3.11	Experiments with the MDP	121
4	Branch-and-Bound	125
4.1	Introduction	125
4.2	Branch-and-Bound with Partial Orderings for the LOP	127
4.3	Lexicographic Search	129
4.4	Extension of Lexicographic Search to Branch-and-Bound	129
4.5	Branch-and-Bound with Lagrangean Relaxation	131
4.6	Improved MDP formulations	134
4.7	Branch-and-Bound with Partial Selections for the MDP	138
5	Branch-and-Cut for the LOP	143
5.1	Integer Programming	143
5.2	Cutting Plane Algorithms	145
5.3	Branch-and-Cut with 3-Dicycle Cuts	149
5.3.1	Solving the 3-Dicycle Relaxation	149
5.3.2	An LP Based Heuristic	150
5.3.3	Computational Results with 3-Dicycles	151
5.4	Generation of Further Cuts	152
5.4.1	Chvátal-Gomory Cuts	153
5.4.2	Maximally Violated Mod- k Cuts	154
5.4.3	Mod-2 Cuts	155
5.5	Implementation of Branch-and-Cut	156
5.5.1	Initialization	157
5.5.2	Active Variables	157
5.5.3	Local Upper Bound	157
5.5.4	Branching	158
5.5.5	Fixing and Setting of Variables	158
5.5.6	Logical Implications	158
5.5.7	Selection of Nodes	158
5.5.8	Lower Bounds	159
5.5.9	Separation	159

5.5.10	Elimination of Constraints	159
5.5.11	Constraint Pool	160
5.5.12	Pricing	160
5.5.13	Infeasible LPs	160
5.5.14	Addition of Variables	161
5.6	Some Computational Results	161
6	The Linear Ordering Polytope	167
6.1	Polyhedral Combinatorics and Basic Results	167
6.2	Facets of the Linear Ordering Polytope	170
6.3	Computation of Complete Descriptions	176
6.4	Differences between Facets	180
6.5	Separation of Small Facets	185
6.6	Computational Experiments with Small Facets	189
6.6.1	Comparison of Heuristics	189
6.6.2	Cutting Plane Selection	189
6.6.3	Number of Classes Taken into Account	190
6.6.4	Facet Selection	191
6.7	Local Cuts and Target Cuts	191
7	Further Aspects	195
7.1	Approximative Algorithms	195
7.2	Integrality Gaps of LP Relaxations	196
7.3	Degree of Linearity	196
7.4	Semidefinite Relaxations	200
7.5	Context Independent Solvers	202
7.6	Difficulty of LOP Instances	204
7.7	Multiple Optimal Rankings	206
7.8	Sparse Problems	207
7.9	A Simple Dual Heuristic	208
7.10	Future Research on the LOP	210
7.11	Extensions of the MDP	213
	References	217
