Abstract	iii
Zusammenfassung	v
General Remarks	vii
List of Figures	xiii
List of Tables	xv
List of Publications	xvi
Introduction	xvii

I Development of a High-resolution Chirped-Pulse Fourier Transform Millimeter Wave Spectrometer	1
1 Introduction	2
2 Fast Passage Phenomena	7
2.1 Linear Chirped-Pulses	7
2.2 The Two-Level Bloch Equation System	8
2.3 Fast Passage Phenomena using Chirped Pulses	10
2.3.1 The Rapid Adiabatic Passage and the Linear Fast Passage	10
2.3.2 Signal Strength at the Receiver	13
3 Microwave and Millimeter Wave Techniques	15
3.1 Microwave Components	15
3.1.1 Specifications and Notations	15
3.1.2 Arbitrary Waveform Generators	16
3.1.3 Frequency Multipliers	16
3.1.4 Frequency Mixers	16
3.1.5 Amplifier Multiplier Chains	19
3.2 Receiver Techniques	19
3.2.1 Receiver Sensitivity	19
3.2.2 Inherent Noise Measurement	20
3.2.3 Friis Formula	21
3.2.4 Superheterodyne Receiver	21

4	Experimental Setup and Characterisation of the CPFTmmw Spectrometer	23
4.1	Experimental Setup	23
4.2	Timing Scheme	29
4.3	Automatisation of the CPFTmmw Spectrometer using LabVIEW	30
4.4	Receiver Noise Determination	33
4.4.1	Receiver Noise from Theory	33
4.4.2	Hot-Cold Measurement - Experiment	34
4.5	Receiver Detection Limit	35
4.6	Supersonic Molecular Jet Expansion	36
5	Experimental Aspects of Resonant Coherent Excitation and Observation of Free Induction Decays	40
5.1	Fast Passage Phenomena in this Work	40
5.2	Decoherence Mechanisms	41
5.3	Signal Strength and Bandwidth	44
5.4	Up- and Downchirps	45
5.5	Acquisition of Segmented Spectra	47
5.5.1	Spectra of Methanol	47
5.5.2	Spectra of Acetonitrile	49
5.5.3	Spectra of Propylene Oxide	51
5.6	Combination of a Multipass Setup with Chirped-Pulse	53
5.7	Side Band Separation	54
5.8	Jitter and Phase Stability	55
5.9	Comparison to other Experiments	56
5.9.1	Comparison with the W-band Spectrometer at DESY (Hamburg)	56
5.9.2	Comparison with Park <i>et al.</i> 2011	59
5.9.3	Comparison of the Setup in the Normal and High-power Mode	60
5.10	Upcoming Experimental Improvements and Developments	61
5.10.1	Improvements with respect to MW and mmw Techniques	61
5.10.2	Mechanical Improvements of the Setup	63
6	Conclusion and Outlook	64
 II High-resolution Rotational Spectroscopy on Oxiranes: Styrene Oxide, Propylene Oxide, and Doubly Deuterated Propylene Oxide		66
7	Introduction	67
8	Theory	72
8.1	Rotational Spectroscopy	72
8.1.1	Rotations of Molecules	72
8.1.2	Hamiltonian of the Asymmetric Rotor Molecule	73
8.1.3	Selection Rules and Dipole Moments	75
8.1.4	Quantum Labelling of Asymmetric Top Transitions and Energy Levels	75
8.1.5	Line Intensities and Rotational Partition Functions	78
8.1.6	Line Shapes	78
8.2	Rotational Spectroscopy of Vibrationally Excited States	80
8.2.1	Diatomic Vibrating Rotors	80
8.2.2	Polyatomic Molecules	84
8.3	Internal Rotation - A Large Amplitude Motion	85

8.3.1	Threefold Symmetric Internal Rotor - The Methyl Top	85
8.3.2	Periodic Potential Functions	86
8.3.3	High Barrier Approximation	87
8.3.4	Hamiltonian of the Asymmetric Molecule Propylene Oxide	87
8.3.5	Selection Rules and Statistical Weights for Propylene Oxide	90
8.3.6	Energy Level Correlation Diagram and Quantum Labelling for Propylene Oxide	91
8.3.7	The Internal Rotation Programmes ERHAM and XIAM for Propylene Oxide	93
8.3.8	ERHAM and XIAM: Notations and Coordinate Transformations	95
9	Experiments	97
9.1	The Hamburg COMPACT Spectrometer	97
9.2	The Hamburg W-band Spectrometer	98
9.3	The Kassel THz Spectrometer	98
9.4	The Lille SMM	100
10	High-resolution Rotational Spectroscopy of Styrene Oxide	101
10.1	General	102
10.2	Experimental Details	102
10.3	Quantum Chemical Calculations	103
10.4	Assignment of Rotational Transitions	103
10.4.1	Assignment of Ground State Transitions	103
10.4.2	Assignment of Transitions of the Vibrationally Excited States	104
10.5	Experimental Results and Discussion	104
10.5.1	The Vibrational Ground State of Styrene Oxide	104
10.5.2	The Vibrationally Excited States of Styrene Oxide	108
10.5.3	The ^{13}C and ^{18}O Isotopologues of Styrene Oxide	112
10.6	Conclusion	113
11	The High-resolution Millimeter and Sub-millimeter Wave Spectrum of Propylene Oxide and Analysis of its First Excited Torsional State	115
11.1	General	116
11.2	Experimental Details	116
11.3	Quantum Chemical Calculations	117
11.4	Analysis Methods	119
11.5	Determination of the Initial Parameter Set of Propylene Oxide for ERHAM and XIAM	122
11.5.1	Determination of the Structural Parameter Set	122
11.5.2	Determination of the Internal Barrier Properties	124
11.6	Spectral Analysis and Results	125
11.6.1	Spectral Analysis	126
11.6.2	Spectroscopic Results	132
11.7	Discussion	136
11.7.1	Theory and Experiment	136
11.7.2	ERHAM / XIAM Analysis and Literature	137
11.7.3	ERHAM and XIAM Analysis	138
11.8	Conclusion	139

12 High-resolution Rotational Spectroscopy of Doubly Deuterated Propylene Oxide and Analysis of its Torsional Ground State	140
12.1 General	141
12.2 Synthesis	141
12.3 Experimental Details	141
12.4 Results and Discussion	141
12.4.1 Quantum Chemical Calculations	141
12.4.2 Analysis Methods	142
12.4.3 Spectral Analysis	142
12.4.4 Spectroscopic Results and Discussion	145
12.5 Conclusion	147
13 Aspects of Radio Astronomical Searches and Astrochemistry	148
Conclusion and Outlook	157
Appendices	
Appendix General	163
Appendix CPFTmmw Spectrometer	164
Appendix Kassel THz Spectrometer	169
Appendix Styrene Oxide	170
Appendix Propylene Oxide	173
Appendix Deuterated Propylene Oxide	177
References	179
