

Contents

1	Introduction to <i>Octave</i>/MATLAB	1
1.1	Starting up <i>Octave</i> or MATLAB and First Steps	1
1.1.1	Starting up <i>Octave</i>	3
1.1.2	Packages for <i>Octave</i>	7
1.1.3	Information about the operating system and the version of <i>Octave</i> .	10
1.1.4	Starting up MATLAB	12
1.1.5	Calling the operating system and using basic Unix commands . . .	13
1.1.6	How to find out whether you are working with MATLAB or <i>Octave</i> .	14
1.1.7	Where and how to get help	15
1.1.8	Vectors and matrices	16
1.1.9	Broadcasting	24
1.1.10	Timing of code and using a profiler	25
1.1.11	Debugging your code	26
1.1.12	Command line, script files and function files	26
1.1.13	Local and global variables, nested functions	28
1.1.14	Very elementary graphics	29
1.1.15	A breaking needle problem	30
1.2	Programming with <i>Octave</i>	35
1.2.1	Displaying results and commenting code	35
1.2.2	Basic data types	36
1.2.3	Structured data types and arrays of matrices	38
1.2.4	Built-in functions	42
1.2.5	Working with source code	51
1.2.6	Loops and other control statements	52
1.2.7	Conditions and selecting elements	57
1.2.8	Reading from and writing data to files	59
1.3	Solving Equations	64
1.3.1	Systems of linear equations	64
1.3.2	Zeros of polynomials	75
1.3.3	Nonlinear equations	76
1.3.4	Optimization	82
1.4	Basic Graphics	86
1.4.1	2-D plots	87

1.4.2	Printing figures to files	93
1.4.3	Generating histograms	97
1.4.4	Generating 3-D graphics	98
1.4.5	Generating vector fields	103
1.5	Basic Image Processing	106
1.5.1	First steps with images	108
1.5.2	Image processing and vectorization, edge detection	114
1.6	Ordinary Differential Equations	122
1.6.1	Using C++ code to speed up computations	131
1.6.2	ODE solvers in MATLAB/Octave	133
1.6.3	The command <code>lsode()</code> in Octave	138
1.6.4	Codes with fixed step size, Runge–Kutta, Heun, Euler	139
1.6.5	List of files	144
2	Elementary Statistics With Octave/MATLAB	147
2.1	Introduction	147
2.2	Commands to Load Data from Files	147
2.3	Commands to Generate Graphics used in Statistics	147
2.3.1	Histograms	149
2.3.2	Bar diagrams and pie charts	150
2.3.3	More plots	151
2.4	Data Reduction Commands	154
2.4.1	Basic data reduction commands	154
2.4.2	Data reduction commands for pairs of vectors	156
2.4.3	Data reduction commands for matrices	158
2.5	Performing Linear Regression	158
2.5.1	Using the command <code>LinearRegression()</code>	159
2.5.2	Using the command <code>regress()</code>	162
2.5.3	Using the commands <code>lscov()</code> , <code>polyfit()</code> or <code>ols()</code>	163
2.6	Generating Random Numbers	163
2.7	Commands to Work with Probability Distributions	164
2.7.1	Discrete distributions	165
2.7.2	Continuous distributions	168
2.8	Commands for Confidence Intervals and Hypothesis Testing	175
2.8.1	Confidence intervals	175
2.8.2	Hypothesis testing, p-value	183
2.9	List of Files for Statistics	193
3	Engineering Applications	195
3.1	Numerical Integration and Magnetic Fields	198
3.1.1	Basic integration methods if data points are given	198
3.1.2	Basic integration methods for given functions	201
3.1.3	Integration over domains in $\mathbb{R}^2$	205
3.1.4	From Biot–Savart to magnetic fields	208

3.1.5	Field along the central axis and the Helmholtz configuration	209
3.1.6	Field in the plane of the conductor	212
3.1.7	Field in the xz -plane	213
3.1.8	The Helmholtz configuration	215
3.1.9	List of codes and data files	219
3.2	Linear and Nonlinear Regression	219
3.2.1	Linear regression for a straight line	220
3.2.2	General linear regression, matrix notation	221
3.2.3	Estimation of the variance of parameters, confidence intervals	223
3.2.4	Estimation of variance of the dependent variable	225
3.2.5	An elementary example	228
3.2.6	Example 1: Intensity of light of an LED depending on the angle of observation	233
3.2.7	QR factorization and linear regression	237
3.2.8	Weighted linear regression	239
3.2.9	More commands for regression with Octave or MATLAB	241
3.2.10	Code for the function <code>LinearRegression()</code>	242
3.2.11	Example 2: Performance of a linear motor	242
3.2.12	Example 3: Calibration of an orientation sensor	248
3.2.13	Example 4: Analysis of a sphere using an AFM	252
3.2.14	Example 5: A force sensor with two springs	256
3.2.15	Nonlinear regression, introduction and a first example	259
3.2.16	Nonlinear regression with a logistic function	264
3.2.17	Nonlinear regression with an arctan function	267
3.2.18	Approximation by a Tikhonov regularization	269
3.2.19	A real world nonlinear regression problem	270
3.2.20	The functions <code>lsqcurvefit</code> and <code>lsqnonlin</code>	274
3.2.21	List of codes and data files	274
3.3	Regression with Constraints	274
3.3.1	Example 1: Geometric line fit	276
3.3.2	An algorithm for minimization problems with constraints	276
3.3.3	Example 1: continued	280
3.3.4	Detect the best plane through a cloud of points	281
3.3.5	Identification of a straight line in a digital image	283
3.3.6	Example 2: Fit an ellipse through some given points in the plane	285
3.3.7	List of codes and data files	293
3.4	Computing Angles on an Embedded Device	293
3.4.1	Arithmetic operations on a micro controller	294
3.4.2	Computing the angle based on coordinate information	297
3.4.3	Error analysis of arctan-function	298
3.4.4	Reliable evaluation of the arctan-function	298
3.4.5	Implementations of the arctan-function on micro controllers	299
3.4.6	Chebyshev approximations	312
3.4.7	List of codes and data files	316

3.5	Analysis of Stock Performance, Value of a Stock Option	317
3.5.1	Reading the data from the file, using <code>dlmread()</code>	317
3.5.2	Reading the data from the file, using formatted reading	318
3.5.3	Analysis of the data	320
3.5.4	A Monte Carlo simulation	323
3.5.5	Value of a stock option : Black–Scholes–Merton	327
3.5.6	List of codes and data files	332
3.6	Motion Analysis of a Circular Disk	333
3.6.1	Description of problem	333
3.6.2	Reading the data	333
3.6.3	Creation of movie	336
3.6.4	Decompose the motion into displacement and deformation	337
3.6.5	List of codes and data files	340
3.7	Analysis of a Vibrating Cord	340
3.7.1	Design of the basic algorithm	342
3.7.2	Analyzing one data set	347
3.7.3	Analyzing multiple data sets	351
3.7.4	Calibration of the device	357
3.7.5	List of codes and data files	357
3.8	An Example for Fourier Series	358
3.8.1	Reading the data	358
3.8.2	Further information	360
3.8.3	Using FFT, Fast Fourier Transform	361
3.8.4	Moving spectrum	362
3.8.5	Determine the transfer function	365
3.8.6	List of codes and data files	365
3.9	Grabbing Data from the Screen and Spline Interpolation	366
3.9.1	Reading from an <i>Octave</i> /MATLAB graphics window by <code>ginput()</code>	366
3.9.2	Create <code>xinput()</code> to replace <code>ginput()</code>	367
3.9.3	Reading an LED data sheet with <i>Octave</i>	368
3.9.4	Interpolation of data points	370
3.9.5	List of codes and data files	373
3.10	Intersection of Circles and Spheres, GPS	373
3.10.1	Intersection of two circles	374
3.10.2	A function to determine the intersection points of two circles	377
3.10.3	Intersection of three spheres	378
3.10.4	Intersection of multiple circles	380
3.10.5	Intersection of multiple spheres	383
3.10.6	GPS	384
3.10.7	List of codes and data files	385
3.11	Scanning a 3–D Object with a Laser	385
3.11.1	Reading the data	386
3.11.2	Display on a regular mesh	387

3.11.3 Rescan from a different direction and rotate the second result onto the first result	389
3.11.4 List of codes and data files	390
3.12 Transfer Functions, Bode and Nyquist plots	391
3.12.1 Create Bode and Nyquist plots, raw MATLAB/Octave Code	391
3.12.2 Create Bode and Nyquist plots, using the MATLAB-toolbox	394
3.12.3 Create Bode and Nyquist plots, using Octave commands	395
3.12.4 Some commands for control theory	395
Bibliography	401
List of Figures	403
List of Tables	407
Index	409
