Preface *xi*

1	From Mechanochemistry to Mechanoresponsive Materials	1
	<i>Lasith S. Kariyawasam, Connor Filbin, Cameron Locke, and Ying Yang</i>	
1.1	Introduction	1
1.2	Mechanochemistry in Biological Systems	2
1.2.1	A Stressful Environment During Heart Development	3
1.2.2	Protein Unfolding by Force	4
1.2.3	Stress Mitigation by Tissue	6
1.2.4	Sensing by Ion Channel Opening	6
1.3	Mechanistic View of Mechanochemistry	7
1.4	Polymer Covalent Mechanochemistry	15
1.4.1	Pyran-Based Mechanochromophores	16
1.4.2	Retro-Cycloadditions	19
1.4.3	Ladderenes	23
1.4.4	Stable Radical Systems	24
1.4.5	Other Types of Mechanophores	27
1.5	Polymer Noncovalent Mechanochemistry	29
1.5.1	Mechanoresponses of Metal–Ligand Bonds	30
1.5.2	Mechanochemistry of Other Noncovalent Interactions and Their Applications in Functional Polymers	37
1.6	Conclusions	41
	References	42
2	Photoresponsive Polymers	53
	<i>Hossein Roghani-Mamaqani and Zeinab Tajmoradi</i>	
2.1	Introduction	53
2.2	Photoresponsive Polymers	55
2.2.1	Photoluminescent Polymers	55
2.2.1.1	Fluorescent Polymers	56
2.2.1.2	Phosphorescent Polymers	58
2.2.2	Photochromic Polymers	62
2.2.3	Photocleavable Polymers	71

2.2.4	Photodimerizable Polymers	74
2.2.5	Photoadaptable Polymers	76
2.3	Applications of Photoresponsive Polymers	83
2.3.1	Smart Polymeric Inks	83
2.3.2	Polymer Sensors	89
2.3.3	Photolithography	93
2.3.4	Surface Active Agents	95
2.3.5	Photorheological Polymers	98
2.3.6	Self-Healing Polymers	103
2.3.7	Shape-Changing Polymers	106
2.3.8	Photoconductive Polymers	109
2.3.9	Drug Delivery	111
2.3.10	Membranes, Films, and Textiles	112
2.4	Summary and the Future	115
2.4.1	Water Contact Angle Variation	116
2.4.2	Viscosity Variation	116
2.4.3	Color Change and Emission	117
2.4.4	Sol–Gel Transition	117
	Abbreviations	118
	References	119
3	Polymer Systems for Ionizing Radiation Dosimetry and Radiotherapy	135
	<i>Li Jiang, Chengfang Zhang, Rensheng Wang, and Liang Hu</i>	
3.1	Introduction	135
3.2	Interaction of Radiation with Matter	136
3.2.1	α -Particles	136
3.2.2	Electrons	137
3.2.3	Photons	137
3.3	Polymer Systems for Ionizing Radiation Dosimetry	139
3.3.1	Polymer-Based Dosimeters	139
3.3.2	Polymer/Dye Dosimeters	139
3.3.3	Fluorescent Polymer Dosimeters	141
3.3.4	Polymer/Metal Nanomaterials Dosimeters	143
3.4	Ionizing Radiation-Responsive Polymer Systems for Therapy	146
3.5	Conclusion	149
	Acknowledgments	151
	References	151
4	Shrink and Wrinkle – Thermally Responsive Substrates for Thin-Film Structuring	157
	<i>Eduardo González-Martínez and Jose Moran-Mirabal</i>	
4.1	Structured Thin Films	157
4.2	Measuring the Mechanical Properties of Thin Films Using Thermal Wrinkling	159
4.2.1	Thermally Structured Thin Films for Cell Culture	162

4.2.2	Wrinkled Conductive Thin Films for Wearable Electronics	167
4.2.3	Wrinkled Electrochemical Sensors	173
4.2.4	Current Challenges and Future Perspectives for the Use of Wrinkled Thin Films	175
	References	176
5	Design of Nanocomposite Microgels Prepared by Seeded Emulsion Polymerization in the Presence of Microgels	181
	<i>Takumi Watanabe and Daisuke Suzuki</i>	
5.1	Background on Composite Hydrogels	181
5.2	Background on Composite Microgels	182
5.3	Conventional Emulsion Polymerization and SEP	184
5.4	Nanocomposite Microgels Prepared by SEP in the Presence of Microgels	186
5.5	Design of the Internal Structure of the Nanocomposite Microgels	188
5.6	Synthesis of Multi-layered Nanocomposite Microgels	189
5.7	Characterization of Nanocomposite Microgels	190
5.8	Applications of Nanocomposite Microgels	193
5.9	Summary and Perspective	195
	References	196
6	Compressible Microgels in Concentrated Suspensions: Phase Behavior, Flow Properties, and Scattering Techniques to Probe Their Structure and Dynamics	203
	<i>A. Scotti, U. Gasser, B. Zhou, A. Arenas-Gullo, A. de la Cotte, J. Rojo González, and A. Fernandez-Nieves</i>	
6.1	Introduction	203
6.2	Swelling Thermodynamics	207
6.2.1	Polymer/Solvent Mixing	208
6.2.2	Elasticity	208
6.2.3	Ionic Effects	209
6.2.4	Equation of State	210
6.3	Experimental Techniques	210
6.3.1	Dynamic Light Scattering	211
6.3.1.1	Auto-correlation Experiments	213
6.3.1.2	Cross-correlation and 3D-DLS Experiments	214
6.3.2	Small-angle Neutron-scattering	216
6.3.2.1	SANS Setup	218
6.3.2.2	Scattering Theory	218
6.3.2.3	Form Factor and Structure Factor	220
6.3.2.4	Contrast Variation	222
6.4	Suspension Phase Behavior	228
6.5	Flow Properties	231
6.6	Final Remarks	235
	References	236

7	Structure and Properties of Smart Micro- and Nanogels Determined by (Neutron) Scattering Methods	241
	<i>Julian Oberdisse and Thomas Hellweg</i>	
7.1	Introduction	241
7.2	Scattering Techniques Applied to Microgels	242
7.2.1	Static and Dynamic Light Scattering Applied to Microgels	242
7.2.1.1	Static Light Scattering (SLS)	243
7.2.2	Dynamic Light Scattering (DLS/PCS)	245
7.2.3	Small-Angle Neutron and X-Ray Scattering Applied to Microgels	247
7.3	Multicompartment and Multi-Stimuli-Responsive Microgels	254
7.4	Time-Resolved Small-Angle Scattering	263
7.5	Crowded Microgel Systems	266
7.6	Conclusion and Outlook	270
	Appendix: Absolute Intensity for Fuzzy Sphere Form Factors	270
	References	271
8	Stimuli-Responsive Fluorescent Polymeric Hydrogels	281
	<i>Wei Lu, Shuxin Wei, and Tao Chen</i>	
8.1	Introduction	281
8.2	Strategies for Preparing Fluorescent Polymeric Hydrogels (FPHs)	282
8.2.1	Physically Incorporating Fluorogens into Polymeric Hydrogels	282
8.2.2	Covalently Bonding Fluorogens into Polymeric Hydrogels	284
8.2.3	Supramolecular Polymerizing/Crosslinking Monomeric Fluorogens	286
8.2.4	Comparison of Different Synthetic Strategies	290
8.3	Promising Applications	290
8.3.1	Optical Sensing and Bio-imaging	290
8.3.2	Information Encoding and Encryption	293
8.3.3	Bioinspired Mechanosensing Systems and Soft Actuators/Robotics	294
8.4	Conclusions	297
	References	298
9	The Fabrication and Applications of Bioinspired Hydrogel Actuators	301
	<i>Baoyi Wu, Jiawei Zhang, and Tao Chen</i>	
9.1	Introduction	301
9.2	The Classification of Hydrogel Actuators	302
9.2.1	Addition of Active Ingredient	302
9.2.2	Pneumatic/Hydraulic Actuators	305
9.2.3	Stimuli-Responsive Hydrogel Actuator Derived from Asymmetric Swelling	306
9.2.3.1	Single-Stimulus-Responsive Hydrogel Actuators	307
9.2.3.2	Multi-stimuli-Responsive Hydrogel Actuators	308
9.3	Anisotropic Structures	310
9.3.1	1D/2D Anisotropic Structures	310

9.3.1.1	Bilayer	310
9.3.1.2	Oriented	311
9.3.1.3	Gradient	312
9.3.1.4	Patterned	315
9.3.2	3D Anisotropic Structures	315
9.4	Methods to Fabricate Anisotropic Structures	318
9.4.1	Traditional Technology	318
9.4.1.1	Stepwise Polymerization	318
9.4.1.2	3D Printing	320
9.4.1.3	Macromolecular Assembly	322
9.4.2	Innovative Technology	322
9.5	Applications	325
9.5.1	Soft Robots	325
9.5.2	Artificial Muscles	327
9.5.3	Biomimetic Devices	329
9.5.4	Information Storage Materials	329
9.6	Conclusion	332
	Conflict of Interest	333
	Acknowledgments	333
	References	333
10	Hydrogels-Based Electronic Devices for Biosensing Applications	339
	<i>Quanduo Liang, Yuyuan Lu, and Qiang Zhang</i>	
10.1	Introduction	339
10.2	Flexible Hydrogel-Based Sensors	342
10.2.1	Principles of Conductive Hydrogel Sensors	343
10.2.2	Improved Mechanical Properties of Hydrogel-Based Sensors	347
10.2.3	Prolonged Longevity of Hydrogel Sensors	351
10.2.4	Expanded Usage Scenarios of Hydrogel-Based Sensors	353
10.2.5	Multifunctionalization and Expanding Application of Hydrogel Sensor	354
10.3	Tissue–Machine Interfaces	356
10.3.1	Design and Mechanism of the Neural Interfaces	356
10.3.2	Multifunctional Applications of Biointerfaces	360
10.4	The Prospects of Hydrogel Bioelectronic Devices	363
	Acknowledgments	364
	References	364
