

1. Introduction	15
1.1. Objectives	17
1.2. Outline	18
1.3. Comment on the framework	20
2. Governing equations	21
2.1. Transport equations for a moving volume	21
2.2. Continuity equation	22
2.3. Momentum equation	23
2.3.1. Stress tensor	23
2.3.2. Gravitational force	24
2.4. Energy equation	24
2.5. Averaging techniques	25
2.6. Averaged equations	26
2.7. Governing equations in rotating systems	29
3. Single fluid discretization	31
3.1. Governing equations	31
3.1.1. Momentum equation	32
3.1.2. Pressure correction equation	33
3.2. Pressure based coupled algorithm	33
3.3. Momentum interpolation for single phase	35
3.3.1. Consistency of the transient term	37
3.4. Boundary conditions	38
3.4.1. Multigrid mesh interface (MMI)	38

3.4.2. Mixing plane (MP)	39
4. Real gas models and constitutive relations	41
4.1. Thermodynamic modeling of real gas	42
4.1.1. General comment on real gas modeling	43
4.2. Real gas state equations	43
4.2.1. Cubic state equations	44
4.2.2. IAPWS-97	46
4.3. Caloric state equations	49
4.3.1. Internal energy	50
4.3.2. Enthalpy	53
4.3.3. Entropy	54
4.4. Fluid properties	56
4.4.1. Specific heat capacity at constant volume	56
4.4.2. Specific heat capacity at constant pressure	57
4.4.3. Ideal Gas Heat Capacity	57
4.4.4. Laminar Conductivity	59
4.4.5. Laminar Viscosity	60
4.4.6. Surface tension	62
4.4.7. Mach number	62
4.5. Governing equations	63
4.5.1. Continuity equation	63
4.5.2. Energy equation	67
4.6. Boundary conditions	69
4.6.1. Total conditions	69
4.7. Update of properties	73
4.7.1. Updating temperature and density	73
4.7.2. Total Pressure and Total Temperature	73
4.8. Property tables	74
5. Real gas models: Validation and applications	77
5.1. Transonic bump test case	77
5.1.1. Consistency of the iterative procedures with algebraic perfect gas laws	78
5.1.2. Redlich Kwong State Equation	79
5.1.3. IAPWS-97	80
5.2. IAPWS-97 validation on Moses-Stein Nozzle geometry	81
5.3. Cavitation on NACA 0012 profile	84
5.4. Two-Stage Radial Compressor	85
5.4.1. Numerical Setup	85
5.4.2. Global Performance Comparison	85

6. Multiphase flows	89
6.1. Multiphase Navier-Stokes equations	91
6.1.1. Phase indicator function	92
6.1.2. Mass conservation equation	92
6.2. Governing equations	94
6.2.1. Two-phase momentum equation	95
6.2.2. Pressure based form of the continuity equation	95
6.2.3. Conservation of phasic mass	96
6.3. Historical review of pressure based multiphase algorithms	102
6.3.1. Improvements to the numerical stability in the presence of drag . .	102
6.3.2. Pressure based segregated multiphase algorithms	103
6.4. Coupled multiphase system	105
6.4.1. Multiphase momentum, assembly of the drag	106
6.4.2. Multiphase continuity, scaling of the phasic conservation of mass .	108
6.5. Extension of the Rhie-Chow interpolation to multiphase flows	109
6.5.1. Explicit Drag Formulation (ED)	110
6.5.2. Semi Implicit Drag Formulation (SID)	111
6.5.3. Fully Implicit Drag Formulation (FID)	112
6.6. Boundary conditions	114
6.6.1. Volume fraction mixing plane	114
6.6.2. Mass fraction	115
7. Multiphase flows: Validation and applications	117
7.1. Morsi and Alexander	117
7.1.1. Numerical setup	117
7.2. Extended Rhie-Chow formulation	119
7.2.1. Numerical setup and results	119
7.3. JPL Nozzle	120
7.4. Low pressure steam turbine	122
7.4.1. Numerical setup	122
7.4.2. Results	123
8. Phase change	127
8.1. Theory	128
8.1.1. Classical nucleation theory	129
8.1.2. Correction to the classical nucleation theory	131
8.1.3. Droplet growth	132
8.2. Conservation Equations	135
8.2.1. Droplet number equation	135
8.2.2. Phasic conservation equation	135

8.2.3.	Momentum equation	136
8.2.4.	Energy equation	137
8.2.5.	Pressure equation	138
9.	Phase change: Validation and applications	139
9.1.	General note on the numerical setup	140
9.2.	Moses Stein Nozzle	140
9.2.1.	Numerical setup	141
9.2.2.	Results	141
9.3.	Bakhtar cascade	143
9.4.	Generic low pressure steam turbine, <i>STAC</i>	145
9.4.1.	Geometrical description and mesh statistics	145
9.4.2.	Numerical setup	146
9.4.3.	Results	146
10.	Population balance equation	149
10.1.	Theory	149
10.2.	MUSIG	150
10.2.1.	Computation of size groups	151
10.2.2.	Population Balance Equation	152
10.2.3.	Coalescence	154
10.2.4.	Breakup	155
10.2.5.	Breakage models	157
10.2.6.	Coalescence Models	160
11.	Population balance: Initial validation	165
11.0.1.	Bubble breakup	166
11.0.2.	Bubble coalescence	166
11.0.3.	Summary	167
12.	Conclusions	169
12.1.	Real Gas Thermophysics	169
12.2.	Coupled Euler-Euler formulation	170
12.3.	Phase change	171
12.4.	Outlook and further developments	171
	Bibliography	175
