

Excimer Lasers

Edited by Ch. K. Rhodes

With Contributions by

Ch. A. Brau H. Egger A. Gallagher P.W. Hoff
K. Hohla D. L. Huestis M. Krauss G. Marowsky
M.V. McCusker F.H. Mies H. Pummer
Ch. K. Rhodes F. K. Tittel

Second Enlarged Edition

With 100 Figures

Springer-Verlag

Berlin Heidelberg New York Tokyo 1984

Contents

1. Introduction. By P. W. Hoff and Ch. K. Rhodes (With 2 Figures) . . .	1
References	4
2. Electronic Structure and Radiative Transitions of Excimer Systems.	
By M. Krauss and F. H. Mies (With 16 Figures)	5
2.1 Rare Gas Dimers: A Rydberg Example	7
2.1.1 Dimer Ions	8
2.1.2 Ground State	10
2.1.3 Rydberg States	10
2.1.4 Observed Spectroscopy	12
2.2 Rare Gas-Halides: Ion-Pair Excimers	13
2.2.1 The Ground State	13
2.2.2 The Ion-Pair Excited States	14
2.2.3 Rydberg States	16
2.2.4 Observed Spectra	16
2.3 Rare Gas+Group VI: Valence and Ion-Pair Excimers	19
2.3.1 Valence States	19
2.3.2 Ion-Pair States	21
2.3.3 Rydberg States	22
2.4 Rare Gas+Group IV: Analogous to Group VI	22
2.5 Rare Gas+Alkali: An Effective One-Electron Interaction	23
2.6 Rare Gas+Group II: Closed Shell and Sub-Shell	25
2.7 Rare Gas+Group III and V	27
2.8 Group II+Group II: Covalent Excimers	28
2.8.1 Valence and Ion Pair States	29
2.8.2 Rydberg States	31
2.8.3 Observed Spectra	31
2.9 Group II+Alkali	32
2.10 Polyatomic Excimers: Ion-Pair Clusters and Triatomic Metals	33
2.11 Excimer Emission and Gain Cross-Sections	34
2.11.1 Cross-Section for Steeply Repulsive Potentials; $\delta_{r_e} \ll 1$	36
2.11.2 Cross-Section for Weak Lower State Potentials; $\delta_{r_e} \gg 1$	38
2.12 Total Excimer Gain, Including Final State Absorption	41
References	42

3. The Rare Gas Excimers. By M.V. McCusker (With 13 Figures) . . .	47
3.1 Kinetics in the Pure Rare Gases	48
3.1.1 Excimer Decay Mechanisms	50
3.1.2 Laser Kinetics Experiments	54
3.1.3 Prognosis	56
3.2 The Rare Gas-Oxide Laser	57
3.2.1 The Atoms of Group VI-A	58
3.2.2 The Mechanisms for Populating the Upper Levels	61
3.2.3 Photolytic Pumping	63
3.2.4 The Absorptions	66
3.3 The Homonuclear Halogens	67
3.3.1 Spectroscopic Features: Bound-to-Bound Transitions . .	67
3.3.2 Halogen Spectra and Identification	69
3.3.3 Laser Demonstrations	72
3.3.4 Homonuclear Halogen Kinetics	74
3.3.5 The Production of the Upper States	77
3.3.6 Extraction Efficiency	80
3.3.7 Photolytic Pumping	81
3.3.8 The Fluorescence Yields	82
3.3.9 Prognosis	82
References	83
4. Rare Gas Halogen Excimers. By Ch. A. Brau (With 8 Figures) . . .	87
4.1 Spectroscopy	88
4.2 Reaction Kinetics	96
4.2.1 Formation and Quenching of Rare Gas Halides	96
4.2.2 Kinetics of Pure Rare Gases	102
4.2.3 Kinetics of Rare Gas Mixtures	106
4.3 Electron Beam and Nuclear Pumped Lasers	110
4.4 Discharge Pumped Lasers	116
4.4.1 Discharge Physics	116
4.4.2 Electron Beam Stabilized Discharges	118
4.4.3 Avalanche Discharges	122
4.5 Applications	126
4.6 Recent Advances in Rare Gas Halogen Systems	130
References	133
Note Added in Proof	137
5. Metal Vapor Excimers. By A. Gallagher (With 19 Figures)	139
5.1 Optical Properties	140
5.1.1 Vibrational-Rotational Population Distribution in High- Pressure Gases	140
5.1.2 Thermodynamic Relations Between Absorption and Emission	142
5.1.3 Applications of the Classical Franck-Condon Principle . .	145
5.1.4 Homogeneous Broadening	147

5.2	Excimer Systems	148
5.2.1	Group I–VIII Excimers	148
	<i>A–X</i> Bands	148
	Collision-Induced Excimer Bands	153
5.2.2	Group II–VIII Excimers	155
5.2.3	Group III–VIII Excimers	157
5.2.4	Group I–II Excimers	160
5.2.5	Group II–II Excimers	162
	Mg ₂	162
	Cd–Hg	163
	Hg ₂	164
5.2.6	Group III–II Excimers	169
5.2.7	Mercury Halide Excimers	171
5.3	Excitation Methods and Efficiency	173
	References	177

6. Triatomic Rare-Gas-Halide Excimers

	By D. L. Huestis, G. Marowsky, and F. K. Tittel (With 25 Figures)	181
6.1	Background	181
6.2	Spectroscopy	183
6.3	Essential Kinetics	187
	6.3.1 Formation Mechanism	187
	6.3.2 Radiation and Quenching	189
	6.3.3 Specific Examples	190
	a) Ar ₂ F*	190
	b) Kr ₂ F	193
	c) Xenon Halogen Trimers	194
	d) Xe ₂ F	194
	e) Xe ₂ Cl*	197
	f) Xe ₂ Br*	200
6.4	Basic Laser Considerations	200
	6.4.1 Optical Gain	200
	6.4.2 Excimer Absorption Effects	204
	6.4.3 Excitation Techniques	205
	a) Electron-Beam Pumping	205
	b) Electric Discharge Pumping	206
	c) Optical Pumping	207
6.5	Laser Experiments	207
6.6	Summary	211
	References	212

7. High-Spectral-Brightness Excimer Systems

	By H. Pummer, H. Egger, and Ch. K. Rhodes (With 6 Figures)	217
7.1	Spectral, Spatial, and Temporal Control of Excimer Laser Radiation	217

7.2	KrF* System (248 nm)	220
7.3	ArF* System (193 nm)	222
7.4	Picosecond Rare-Gas-Halogen Sources	225
	References	228
8.	Applications of Excimer Systems	
	By K. Hohla, H. Pummer, and Ch. K. Rhodes (With 11 Figures)	229
8.1	Background	229
8.2	Wavelength Conversion of Excimer Lasers to the Vacuum and Extreme Ultraviolet Regions	230
	8.2.1 Harmonic Generation	231
	8.2.2 Stimulated Emission from Multiphoton Excited Inversions	232
	8.2.3 Raman Shifting	235
8.3	Studies of High-Lying Electronic States of Atoms and Molecules	235
	8.3.1 Nonlinear Processes in Molecules	239
	8.3.2 Nonlinear Processes in Atoms	241
8.4	Studies of Condensed Matter	243
	8.4.1 Spectroscopy of Cryogenic Liquids	244
	8.4.2 Photoemission Studies of Condensed Matter Surfaces	246
	8.4.3 Laser Annealing of Semiconductors	247
8.5	Dye Laser Excitation	247
8.6	Remote Sensing	249
8.7	Solid State and Photodissociation Laser Excitation	251
	8.7.1 Solid-State Lasers	251
	8.7.2 Photodissociation Lasers	251
