

Contents

1	Introduction	1
2	Mathematical Preliminaries	5
2.1	Basic Concepts of Vector Spaces	5
2.1.1	Minkowski Functionals	5
2.1.2	The Hahn-Banach Theorem	6
2.1.3	Locally Compact Spaces	10
2.1.4	Seminorms and Local Convexity	11
2.2	Vector Spaces With Order Unit	13
2.3	Base-norm Spaces	18
2.4	Functional Representation	21
2.5	Archimedeanization and Categories	23
2.6	Tensor Products	25
2.6.1	Tensor Products of Vector Spaces	25
2.6.2	Tensor Products of Order Unit Spaces	26
2.7	C^* -algebras	28
2.8	Completely Positive Maps	30
2.9	Convex Polytopes	32
3	Generalized probabilistic theories	35
3.1	Preparation and Measurements	35
3.2	Attributes of GPTs	40
3.3	Examples of GPTs	43
4	Sections and Subsystems	47
4.1	Sections of the Effect Cone	47
4.2	Sections of the State Space	53
4.3	Spekkens' Toy Model	56

5	Two-Sections of Quantum Mechanics	61
5.1	Classification of Two Dimensional Sections	61
5.2	Geometric Evolution of State Spaces	70
6	Conclusion	75
	Bibliography	77
