

AbbreviationsXIII

1 Introduction 1

1.1 A “Biology Building” and the Place of Bioenergetics 1

1.2 Essential Definitions 3

1.2.1 Energy-Transducing Membranes 3

1.2.2 Coupling Ions 5

1.2.3 Convertible Energy Currencies of the Living Cell 6

1.3 $\Delta\bar{\mu}H$, Δp , $\Delta\bar{\mu}Na$ and Δs 8

1.4 Adenosine Triphosphate 9

1.5 Membrane Lipids 11

1.6 Lipid Bilayer 15

1.7 Membrane Proteins 16

2 Specific Methods of Membrane Bioenergetics 19

2.1 Membrane Potential Measurement 19

2.1.1 Proteoliposomes 19

2.1.2 Direct $\Delta\Psi$ Measurement in the Proteoliposome –
Collodion Film System 20

2.1.3 $\Delta\Psi$ Measurement in Intact Cells and Organelles 25

2.1.3.1 Microelectrode Techniques 25

2.1.3.2 Natural Penetrating Ions and Ionophores 26

2.1.3.3 Synthetic Penetrating Ions 27

2.1.3.4 Fluorescing Penetrating Ions: A $\Delta\Psi$ Monitoring
in a Single Cell or Organelle 30

2.1.3.5 The Carotenoid Shift 32

2.2 ΔpH Measurement 32

2.3 Measurement of Fast H^+ Dissociation-Association 33

3 Primary $\Delta\bar{\mu}H$ Generators 35

3.1 The Cyclic Photoredox Chain of Purple Bacteria 35

3.1.1 The Main Components and the Principle of Their
Function 35

3.1.2 The Reaction Centre Complex 40

3.1.2.1 The Protein Composition 40

3.1.2.2 The Arrangement of Redox Groups 41

3.1.2.3 The Sequence of Electron Transfer Events 48

3.1.2.4 The Mechanism of $\Delta\bar{\mu}H$ Generation 50

3.1.3	The CoQH ₂ -Cytochrome <i>c</i> Reductase	55
3.1.4	The Fate of Generated $\Delta\bar{\mu}H$	56
3.2	The Non-Cyclic Photoredox Chain of Green Bacteria	57
3.3	The Non-Cyclic Photoredox Chain of Chloroplasts and Cyanobacteria	60
3.3.1	The Principle of Functioning	61
3.3.2	Photosystem I	63
3.3.2.1	The Subunit Composition	63
3.3.2.2	The Electron Transfer Mechanism	63
3.3.2.3	The Mechanism of $\Delta\bar{\mu}H$ Generation	64
3.3.3	Photosystem II	65
3.3.4	PQH ₂ -Plastocyanin Reductase	66
3.3.5	The Fate of $\Delta\bar{\mu}H$ Generated by the Chloroplast Photosynthetic Redox Chain	70
3.4	The Respiratory Chain	71
3.4.1	The Principle of Functioning	72
3.4.2	The Sources of Reducing Equivalents	74
3.4.3	NADH-CoQ Reductase	75
3.4.3.1	Protein Composition and Redox Centres	75
3.4.3.2	Proof of $\Delta\bar{\mu}H$ Generation	77
3.4.3.3	Possible Mechanisms of $\Delta\bar{\mu}H$ Generation	77
3.4.4	The CoQH ₂ -Cytochrome <i>c</i> Reductase	82
3.4.4.1	Structural Aspects	82
3.4.4.2	A Functional Model	88
3.4.4.3	Interrelations of CoQ(PQ)-Cytochrome <i>c</i> Reductases in Respiratory and Photosynthetic Redox Chains	90
3.4.5	Cytochrome Oxidase	91
3.4.5.1	Cytochrome <i>c</i>	91
3.4.5.2	The Structure of Cytochrome <i>c</i> Oxidase	92
3.4.5.3	Electron Transfer Path	95
3.4.5.4	The Mechanism of $\Delta\bar{\mu}H$ Generation	99
3.4.6	A Three-Cycle Version of the Respiratory Chain	102
3.4.7	Shortened Versions of the $\Delta\bar{\mu}H$ Generating Respiratory Chain	104
3.4.7.1	Reduction of Nitrate	105
3.4.7.2	Reduction of Fumarate	105
3.4.7.3	Methanogenesis	107
3.4.7.4	Oxidations of Substrates of a Positive Redox Potential	108
3.4.8	The Pathways and the Efficiency of Utilization of Respiratory $\Delta\bar{\mu}H$. P/O Ratio	110
3.5	Bacteriorhodopsin	112
3.5.1	The Principle of Functioning	112
3.5.2	The Structure of Bacteriorhodopsin	114
3.5.3	Lipids of the Bacteriorhodopsin Sheets	118
3.5.4	Organization of the Bacteriorhodopsin Sheet	120

3.5.5	Bacteriorhodopsin Photocycle	120
3.5.6	Uphill H^+ Transport by Bacteriorhodopsin	122
3.5.6.1	Correlation of Photocycle, $\Delta\Psi$ Generation, H^+ Release and Uptake	122
3.5.6.2	A Possible Mechanism of H^+ Pumping	124
3.5.7	Bacteriorhodopsin in the Dark. Problem of H^+ Leakage	129
3.5.8	Other Retinal Proteins	130
3.5.8.1	Halorhodopsin	130
3.5.8.2	Halobacterial Sensory Rhodopsin and Phoborhodopsin	132
3.5.8.3	Animal Rhodopsin	134
3.6	Primary $\Delta\mu H$ Generators: Overview	141
3.6.1	The Number of $\Delta\mu H$ Generators in the Living Systems of Various Types	141
3.6.2	Interrelations of H^+ and e^- Transfer in $\Delta\mu H$ Generating Mechanisms	144
4	Secondary $\Delta\mu H$ Generators: H^+-ATPases	145
4.1	Definition and Classification	145
4.2	H^+ -ATPases of Obligate Anaerobic Bacteria	147
4.3	H^+ -ATPase of the Plant and Fungal Outer Cell Membrane	149
4.4	H^+ -ATPase of Tonoplast	150
4.5	Non-Mitochondrial H^+ -ATPase in Animal Cells	152
4.5.1	H^+ -ATPase of Chromaffin Granules	152
4.5.2	Other H^+ -ATPase	153
4.5.3	Gastric Mucosa H^+/K^+ ATPase	154
4.6	Interrelation of Various Functions of H^+ -ATPase	155
5	$\Delta\mu H$ Consumers	157
5.1	$\Delta\mu H$ -Driven Chemical Work	157
5.1.1	H^+ -ATP Synthase	157
5.1.1.1	Subunit Composition	157
5.1.1.2	A Three-Dimensional Structure and Arrangement in the Membrane	167
5.1.1.3	ATP Hydrolysis by Isolated F_1	170
5.1.1.4	Synthesis of Bound ATP by Isolated Factor F_1	172
5.1.1.5	F_0 -Mediated H^+ Conductance	173
5.1.1.6	$\Delta\mu H$ -ATP Interconversion by H^+ -ATP Synthase in Proteoliposomes	175
5.1.1.7	H^+ /ATP Stoichiometry	176
5.1.1.8	Possible Mechanisms of Energy Transduction	177
5.1.1.9	Can Localized $\Delta\mu H$ be Involved in ATP Synthesis?	182
5.1.2	H^+ -Pyrophosphate Synthase	186
5.1.3	H^+ -Transhydrogenase	187
5.1.3.1	General Characteristics	187
5.1.3.2	The Mechanism of Energy Transduction	188

5.1.3.3	Biological Functions	190
5.1.3.4	Other Systems of the Reverse Transfer of Reducing Equivalents	190
5.2	$\Delta\bar{\mu}\text{H}$ -Driven Osmotic Work	191
5.2.1	Definition and Classification	191
5.2.2	$\Delta\Psi$ as the Driving Force	192
5.2.3	ΔpH as the Driving Force	193
5.2.4	Total $\Delta\bar{\mu}\text{H}$ as the Driving Force	195
5.2.5	$\Delta\bar{\mu}\text{H}$ -Driven Transport Cascades	197
5.2.6	Carnitine: An Example of the Transmembrane Group Carrier	198
5.2.7	Some Examples of Proteins Catalyzing $\Delta\bar{\mu}\text{H}$ -Driven Transports	202
5.2.7.1	<i>E. coli</i> Lactose, H^+ Symporter	203
5.2.7.2	Mitochondrial ATP/ADP Antiporter	205
5.2.7.3	Mitochondrial H_2PO_4^- , H^+ Symporter	208
5.2.8	The Role of $\Delta\bar{\mu}\text{H}$ in the Transport of Macromolecules	209
5.2.8.1	Transport of Mitochondrial Proteins, Biogenesis of Mitochondria	210
5.2.8.2	Transport of Bacterial Proteins	215
5.2.8.3	The Role of $\Delta\bar{\mu}\text{H}$ in Transmembrane Protein Movement and Arrangement	216
5.2.8.4	Bacterial DNA Transport	220
5.3	$\Delta\bar{\mu}\text{H}$ -Driven Mechanical Work: Bacterial Motility	221
5.3.1	The Structure of the Bacterial Flagellar Motor	221
5.3.2	$\Delta\bar{\mu}\text{H}$ Powers the Flagellar Motor	223
5.3.3	A Possible Mechanism of the H^+ Motor	225
5.3.4	$\Delta\bar{\mu}\text{H}$ -Driven Movement of Non-Flagellar Motile Prokaryotes and Intracellular Organelles	228
5.3.5	Motile Eukaryote-Prokaryote Symbionts	230
5.4	$\Delta\bar{\mu}\text{H}$ as an Energy Source for Heat Production	232
5.4.1	Three Ways of Converting Metabolic Energy into Heat	232
5.4.2	Thermoregulatory Activation of Free Respiration in Animals	233
5.4.2.1	Skeletal Muscles	233
5.4.2.2	Brown Fat	238
5.4.2.3	Liver	242
5.4.3	Thermoregulatory Activation of Free Respiration in Plants	244
6	$\Delta\bar{\mu}\text{H}$ Regulation, Transmission and Buffering	247
6.1	Regulation of $\Delta\bar{\mu}\text{H}$	247
6.1.1	Alternative Functions of Respiration	247
6.1.2	Regulation of the Flows of Reducing Equivalents Between Cytosol and Mitochondria	251
6.1.3	$\Delta\Psi - \Delta\text{pH}$ Interconversion	254

6.1.4	Relation of the $\Delta\bar{\mu}\text{H}$ Control to the Main Regulatory Systems of Eukaryotic Cells	255
6.1.5	$\Delta\bar{\mu}\text{H}$ Control in Bacteria	256
6.2	$\Delta\bar{\mu}\text{H}$ Transmission	258
6.2.1	General Remarks	258
6.2.2	Lateral Transmission of $\Delta\bar{\mu}\text{H}$ Produced by Light – Dependent Generators in Halobacteria and Chloroplasts	259
6.2.3	Transcellular Power Transmission Along Cyanobacterial Trichomes	260
6.2.4	The Structure and Functions of Filamentous Mitochondria and Mitochondrial Reticulum	260
6.2.4.1	The Dogma of Small Mitochondria	260
6.2.4.2	Giant Mitochondria and <i>Reticulum mitochondriale</i>	261
6.2.4.3	Filamentous Mitochondria	269
6.2.4.4	Mitochondria as Intracellular Proton Cables: Verification of the Hypothesis	272
6.2.4.5	The Possible Mechanism of Lateral $\Delta\bar{\mu}\text{H}$ Transmission	277
6.2.4.6	Lateral Transport of Ca^{2+} , Fatty Acids and Oxygen	279
6.2.4.7	Lateral Transport of the Reducing Equivalents	282
6.2.4.8	Cytochrome b_5 -Mediated Intermembrane Electron Transport	283
6.3	$\Delta\bar{\mu}\text{H}$ Buffering	286
6.3.1	Na^+/K^+ Gradients as a $\Delta\bar{\mu}\text{H}$ Buffer in Bacteria	286
6.3.2	Other $\Delta\bar{\mu}\text{H}$ – Buffering Systems	289
6.3.3	Carnosine and Anserine as Specialized pH Buffers	290
7	The Sodium World	293
7.1	$\Delta\bar{\mu}\text{Na}$ Generators	293
7.1.1	Na^+ – Motive Decarboxylases	293
7.1.2	Na^+ – Motive Respiratory Chain	295
7.1.3	Na^+ – ATPases	298
7.1.3.1	Bacterial Na^+ – ATPases	298
7.1.3.2	Animal Na^+/K^+ ATPase and Na^+ ATPase	299
7.2	Utilization of $\Delta\bar{\mu}\text{Na}$ Produced by Primary $\Delta\bar{\mu}\text{Na}$ Generators	301
7.2.1	Osmotic Work	301
7.2.1.1	Na^+ , Solute – Symports	301
7.2.1.2	Na^+ Ions and Regulation of the Cytoplasmic pH	302
7.2.2	Mechanical Work	304
7.2.3	Chemical Work	305
7.2.3.1	The $\Delta\bar{\mu}\text{Na}$ -Driven ATP Synthesis in Anaerobic Bacteria	306
7.2.3.2	Na^+ -Coupled Respiratory Phosphorylation in <i>Vibrio alginolyticus</i>	310
7.3	How Often is the Na^+ Cycle Used by Living Cells?	313

7.4	Probable Evolutionary Relationships of the Protonic and Sodium Worlds	315
7.5	Na^+/H^+ Antiport in the Animal Cell: H^+ as a Secondary Messenger	319
7.6	A General Scheme of Interrelations of Protonic and Sodium Cycles	322
7.7	Membrane-Linked Energy Transductions when Neither H^+ nor Na^+ is Involved	325
8	Membrane Bioenergetics Studies: An Outlook	327
8.1	Some Prospects for Fundamental Research	327
8.2	Towards Applied Membrane Bioenergetics	330
8.2.1	Medical Aspects	330
8.2.1.1	Respiratory Chain Defects and Related Cases	330
8.2.1.2	Cancer: The Role of Na^+/H^+ Antiporter	332
8.2.1.3	Cancer: Penetrating Cations as Antitumour Agents	333
8.2.1.4	The Action of Antimicrobial Agents, Mediated by Membrane Bioenergetic Systems	335
8.2.2	Two Examples of Possible Technological Application	336
8.2.2.1	ATP Regeneration at the Expense of Light Energy	336
8.2.2.2	The Na^+ Cycle in Useful Bacteria	336
9	Membrane Bioenergetics: A Look into History	338
9.1	The First Ideas and Observations. Chemiosmotic Hypothesis	338
9.2	Uncouplers	339
9.3	$\Delta\bar{\mu}\text{H}$ Across Natural Membranes	340
9.4	$\Delta\bar{\mu}\text{H}$ Across Reconstituted Membranes	341
9.5	ATP Formation Supported by an Artificially Imposed $\Delta\bar{\mu}\text{H}$	342
9.6	Bacteriorhodopsin and Chimerical Proteoliposomes	342
9.7	The Latest History	343
9.8	Membrane Bioenergeticists and Their Outstanding Predecessors	348
10	References	353
