1	Introduction	1
2	Optical fundamentals	5
2.1	Interference	5
2.2	Coherence	9
2.2.1	Temporal coherence	9
2.2.2	Spatial coherence	14
2.3	Light microscopy	16
2.3.1	Working principle of a microscope	16
2.3.2	Illumination	19
2.3.3	Resolution limit in optical imaging according to Abbe	22
2.3.4	Resolution limits for coherent and incoherent imaging	24
3	Multisensor measuring system	31
3.1	Multisensor setup	32
3.2	Vibration compensation	34
3.3	Vibrations caused by lateral scan axes	35
4	Stylus instruments	37
4.1	Tactile stylus instrument	37
4.1.1	Working principle	37
4.1.2	Deviations caused by the stylus tip	39
4.1.3	Measuring setup used in the multisensor measuring system	40
4.2	Atomic force microscope	41
4.2.1	Working principle	41
4.2.2	Measurement deviations of an AFM	44
4.2.3	AFM setup used in the multisensor measuring system	45
5	Coherence scanning Mirau interferometer	47
5.1	Signal formation in a CSI	51
5.2	Signal changes by different surface materials	58
5.3	Influence of the reference mirror in a Mirau setup	60
5.4	Lateral resolution	63
5.5	Signal processing	67
5.5.1	Envelope analysis	67
5.5.2	Phase analysis	71
5.5.3	Phase shifting interferometry	73

5.6	Interferometer setup	74
5.6.1	Measuring processes	75
5.6.2	Stroboscopic illumination	77
5.6.3	Practical realization	78
6	Confocal microscopy	81
6.1	Working principle	84
6.2	Image formation	87
6.3	Lateral resolution	90
6.4	Full-field application	92
6.5	Instrumental setup	95
6.6	Signal analysis	98
6.6.1	Centroid method	99
6.6.2	Fitting method	100
6.6.3	Reference surface	103
7	High-speed interferometric point sensor	105
7.1	Basic principle	111
7.2	Signal analysis	113
7.2.1	Phase retrieval algorithm	113
7.2.2	Extended unambiguous range	115
7.3	Laser interferometric profilometer	117
7.3.1	Sensor setups	117
7.3.2	Modulation of the OPD by an oscillating reference mirror	119
7.3.3	Illumination unit	121
7.3.4	Signal acquisition and processing	123
7.3.5	Detection of the lateral position	127
7.3.6	Real time FPGA signal processing	129
7.3.7	Sensor beam characterization	130
7.4	Further applications of the laser interferometric sensor	134
7.4.1	Laser interferometric distance sensor for lengths measurements	134
7.4.2	Concept of a high-speed sensor for measuring changed layer thicknesses	136
7.5	Distortions	139
7.5.1	Wavelength drift	139
7.5.2	Interference resulting by multiple reflections	140
7.5.3	Deviations resulting by data sampling	142
7.5.4	Influences of speckle	143
8	Comparison measurements	145
8.1	Repeatability	145
8.1.1	Full-field topography sensors	146
8.1.2	Point-wise measuring topography sensors	152
8.2	Groove depth standard	155

8.3	Chirp structure	161
8.3.1	Coarse chirp	161
8.3.2	Fine chirp measured by AFM and tactile stylus instrument	165
8.3.3	Fine chirp measured by Mirau based CSI	167
8.3.4	Fine chirp measured by SCM	169
8.3.5	Fine chirp measured by ICDS and IPS	170
8.4	Rectangular grating	172
8.5	Sinusoidal surface structures	179
8.6	Roughness standards	187
8.6.1	Superfine roughness standard	189
8.6.2	Fine roughness standard	191
8.6.3	Middle roughness standard	193
8.6.4	Coarse roughness standard	195
8.7	Summary	197
9	Conclusion & Outlook	199
	Bibliography	203
	Abbreviations	241
	Symbols	247
