

1.	Introduction	8
	(a) Human Studies	8
	(b) Animal Studies	8
2.	Historical Background	9
3.	Objectives of the Present Review	10
4.	Fat	11
4.1.	Effect of Fat on Induced Intestinal Tumours	11
	(a) Amount of Fat	11
	(b) Type and Saturation Level of Fat	12
	(c) Involvement of Other Factors and Diet Components in Combination with Fat	14
4.2.	Mechanisms for the Effect of Dietary Fat on Induced Tumours of the Gastrointestinal Tract	14
	(a) Microbial Populations in the Intestine	15
	(b) Enzymatic Systems in the Large Intestine	15
	(c) Bile Acids	16
	(d) Cell Proliferation and Mutagenicity	16
	(e) Other Factors	16
4.3.	Epidemiological Evidence for Dietary Effects of Colon Cancer	17
4.4.	Effect of Dietary Fat on Mammary Tumours	17
4.4.1.	Effect of Dietary Fat Diet on Induced Mammary Tumours	17
	(a) Amount of Fat	18
	(b) Type of Fat	19
	(c) Involvement of Other Factors and Diet Components in Combination with Fat	21
4.4.2.	Effect of Dietary Fat on Transplanted Mammary Adenocarcinoma	22
4.5.	Mechanisms for the Effect of Dietary Fat on Mammary Tumours	23
	(a) Tissue Lipids	23
	(b) Hormones	23
	(c) Other Factors	25
4.6.	Epidemiological Evidence for Dietary Effects on Mammary Cancer	26
4.7.	Effect of Dietary Fat on Spontaneous Tumours	26
4.8.	Effect of Dietary Fat on Transplanted Tumours and Other Tumours and Associated Mechanisms	27
	(a) Effect on Transplanted Tumours	27
	(b) Effect on Other Tumours	28
	(c) Other Proposed Mechanisms	29

4.9.	Effect of Cholesterol on Tumour Development	29
4.9.1.	Animal Studies on Cholesterol	29
4.9.2.	Mechanisms for the Effects of Cholesterol	31
4.9.3.	Epidemiological Evidence for the Dietary Effects of Cholesterol	31
5.	Protein and Amino Acids	32
5.1.	Effect of Protein on Tumours	32
5.2.	Mechanisms for the Effect of Protein on Tumour Development	33
5.3.	Effect of Tumours on Endogenous Protein Metabolism	34
5.4.	Effect of Amino Acids on Tumour Development	34
6.	Fibre	37
6.1.	Effect of Fibre on Induced Tumours	37
6.1.1.	Protective Effect	37
6.1.2.	Non-protective Effect	40
6.2.	Effect of Fibre Together with Other Dietary Components	41
6.3.	Mechanisms for the Effects of Fibre	41
6.4.	Epidemiological Evidence for an Effect of Fibre on Cancer	43
7.	Carbohydrates	45
7.1.	Effect of Carbohydrates on Induced and Spontaneous Tumours	45
7.2.	Effect on Transplanted Tumours	47
8.	Other Dietary Components and Contaminants	48
8.1.	Effect of Vitamins on Tumour Development	48
8.1.1.	Effect of Vitamin A and Analogues	48
	(a) Effect in Animal Models	48
	(b) Effect on Transplanted Tumours	52
	(c) Effect on Spontaneous Tumours	52
8.1.2.	Mechanisms of Action of Vitamin A and Analogues	53
8.1.3.	Effect of Other Vitamins on Tumour Development	54
8.1.4.	Epidemiology Studies on Vitamins	57
8.2.	Effect of Trace Minerals on Tumour Development	57
	(a) Effect of Selenium	57
	(b) Effect of Other Metals	61
8.3.	Effect of Lipotropes on Tumour Development and Incidence	61
8.3.1.	Mechanisms for the Action of Lipotropes	63
8.4.	Miscellaneous Dietary Factors in Relation to Tumour Development	65
8.5.	Aflatoxin	66
9.	Antioxidants	68
9.1.	Carcinogenicity Studies with Butylated Hydroxytoluene (BHT)	68
9.1.1.	Effect on Spontaneous Tumour Incidence	68
9.1.2.	Studies with Carcinogen Induction	69
9.2.	Carcinogenicity Studies with Butylated Hydroxyanisole (BHA) and Other Antioxidants	75
9.2.1.	Effects on Spontaneous Tumour Incidence	75
9.2.2.	Studies with Carcinogen Induction	75
9.3.	Studies Comparing the Effect of Antioxidants	78

9.4.	Mechanisms of Antioxidant Effects	83
9.4.1.	General Effect and Toxicity of BHT	83
9.4.2.	Effect of BHT on Enzyme Activity	86
9.4.3.	Effect of BHT on the Metabolism of Other Compounds	88
9.4.4.	Metabolites of BHT	90
9.4.5.	Effect of BHA on Enzyme Activity	91
9.4.6.	Effect of BHA on the Metabolism of Other Compounds	96
9.5.	Effect of Antioxidants in Non-rodent Species	100
9.6.	Mutagenicity Tests with Antioxidants	100
10.	Effect of Dietary Restriction on Tumour Development	103
11.	Discussion	106
11.1.	Suggestions for the Use of Animal Models	107
	(a) Incidence of Spontaneous Tumours	108
	(b) Route of Administration	108
	(c) Carcinogen Metabolism	108
	(d) Strain and Sex Factors Relating to Susceptibility	108
	(e) Laboratory Conditions	108
	(f) Duration and Exposure in Bioassays	108
	(g) Evaluation	109
11.2.	General Epidemiological Evidence for Dietary Effects on Carcinogenesis	109
11.3.	Future Work	110
	Acknowledgements	110
	References	111
	Subject Index	141
