

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Initial situation	4
1.2	Objective and Research Questions	5
<b>2</b>	<b>Findings from Traffic Accident Analysis</b>	<b>7</b>
2.1	Motivation	8
2.2	Categorizing the Levels of Driving Automation	9
2.3	Accident Data to Demonstrate Potential Safety Benefits and Risks	11
2.4	Federal Road Traffic Accident Statistics in Germany	15
2.5	German In-Depth Accident Study (GIDAS)	15
2.6	Road Traffic Accident Statistics in the USA	16
2.7	International Road Accident Data Collections	16
2.8	Accident Data Collections of Automobile Manufacturers	17
2.9	Accident Data of the German Insurance Association	18
2.10	Accident Data Collections of Consumer Associations (ADAC)	18
2.11	The Fundamentals of Accident Data Analysis	19
2.11.1	Level of Data Collection versus Number of Cases	19
2.11.2	The Validity of Areas of Action Compared to Areas of Efficiency	20
2.11.3	Potential Safety Benefits Depending on Automation Levels and Degree of Efficiency	20
2.12	Significance of Possible Predictions Based on Accident Data	22

2.12.1	A Posteriori Analyses of Accident Data for “Driver Only”/“No Automation” .....	22
2.12.2	A Priori Predictions for Assisted and Partially Automated Driving .....	24
2.12.3	Potential Safety Benefits and Test Scenarios for Development of Highly and Fully Automated Driving .....	29
2.13	Potential Safety Benefits / Risks and Impacts on Testing .....	34
2.13.1	Human Error versus Technical Failure in Full Automation .....	34
2.13.2	Potential Safety Benefits – Human and Machine Performance .....	35
2.13.3	Artificial Intelligence versus Human Perception Limits and Consequence .....	36
2.13.4	Human Error versus Artificial Intelligence Incertitudes .....	36
2.13.5	Potential Safety Benefits of Fully Automated Vehicles in Inevitable Incidents .....	40
2.14	Conclusion and Outlook .....	40
<b>3</b>	<b>Analysis of Poor Visibility Real-World Test Scenarios .....</b>	<b>45</b>
3.1	Motivation .....	46
3.2	Safe Development, Validation and Testing .....	48
3.2.1	Return of Feedback from Lifecycle of Automated Vehicles .....	48
3.2.2	Requirements for Automated Driving to Minimize Risk .....	49
3.3	Real-World Scenarios for Development and Testing .....	53
3.3.1	Machine versus Human Perception Limits with Consequences for Testing .....	53
3.3.2	Relevant Real-World Scenarios for Development and Testing .....	55
3.3.3	Integration of Relevant Test Scenarios for Safe Automated Vehicles .....	63
3.3.4	Test Scenarios and Requirements in Relation to Legal and Ethical Aspects .....	64
3.4	Conclusion and Outlook .....	65

<b>4</b>	<b>Technical, Legal, and Economic Risks</b>	67
4.1	Introduction Development	67
4.2	Motivation	67
4.3	Questions of Increased Automation's Product Safety	69
4.4	Continued Technical Development of Assistance Systems – New Opportunities and Risks	70
4.5	Expectations Regarding Safety of Complex Vehicle Technology	71
4.5.1	Steadily Rising Consumer Expectations for Vehicle Safety	71
4.5.2	Current Safety Expectations of Potential Users	72
4.5.3	Considerations of Risks and Benefits	73
4.6	Legal Requirements and Effects	74
4.6.1	Generally Accepted Rules of Technology	76
4.6.2	The Product Safety Law (ProdSG)	76
4.6.3	The Product Liability Law (ProdHaftG)	77
4.6.4	Ethics, Court Judgments to Operational Risk and Avoidability	79
4.7	Product Safety Enhancement in Automated Vehicles Based on Expert Knowledge from Liability and Warranty Claims	81
4.7.1	Experience from Product Crises and Traffic Accidents	81
4.7.2	Potential Hazard Situations at the Beginning of Development	94
4.7.3	Methods for Assessing Risks during Development	95
4.7.4	Approval Criteria from Expert Knowledge	110
4.7.5	Steps to Increase Product Safety of Automated Vehicles in the General Development Process	111
4.7.6	Product Monitoring After Market Launch	115
4.7.7	Steps for Internationally Agreed Best Practices	115
4.8	Conclusion and Outlook:	119
<b>5</b>	<b>Qualitative Interviews with Developers</b>	125
5.1	Response from a Guided Development Process	126
5.2	Engineers: Sensible Creativity under Time Pressure	131
5.3	Psychologist within Development: Priority to Driver's Needs	132
5.4	Executives Focus on Responsibility for Duty of Care	134

5.5	Advantages of Guideline-Based Development .....	136
5.6	Conclusion: Structured Expert Communication Improves Quality .....	137
6	<b>Consulting Concept to Develop New Systems</b> .....	139
6.1	Intrinsic Motivation .....	139
6.2	Consulting Questions to Fulfill Duty of Care .....	141
6.3	Conclusion: Structured Guidelines Support a Safe System .....	143
7	<b>Summary and Discussion</b> .....	145
7.1	Current agile management changes .....	145
7.2	Findings .....	146
7.3	Integration of findings .....	150
<b>Annex A: Change in Jurisdiction on the Responsibility for Pedestrian Accidents</b> .....		155
<b>Annex B: Summarized Questions for Developers</b> .....		159
<b>Annex C: Questionnaire for Qualitative Interviews with Developers</b> ...		179
<b>Additional Figures</b> .....		191
<b>Glossary</b> .....		211
<b>References: Collaborations out of research groups</b> .....		231
<b>References of the author</b> .....		233
<b>List of References</b> .....		235
