

Contents

1 Smart Structure Systems	1
1.1 Introduction	1
1.2 Smart Structure Architecture and Performance	1
1.3 Smart Material Transducer Considerations	5
1.4 Continuum Representation of Smart Structures	9
1.5 Time Domain Representation of Smart Structure Models	15
1.6 Organization of the Book	18
Problems	19
2 Spatial Shading of Distributed Transducers	25
2.1 Introduction	25
2.2 Spatial Shading of Distributed Transducers	26
2.2.1 Design by Example: A Center of Pressure Sensor	26
2.2.2 Approximating Shaded Apertures	29
2.3 Analytical Modeling of Spatial Shading Functions for Distributed Transducers	34
2.3.1 A Compact Analytical Representation of Distributed Transducers	35
2.3.2 Two Dimensional Representation of Distributed Transducers with Nearly Arbitrary Spatial Shading	45
2.4 Application to Two-Dimensional Shading Using Skew Angle	51
2.4.1 Applications Including Finite Skew Angle of Material Axes	55
2.5 Summary	60
Problems	61
3 Active Vibration Control with Spatially Shaded Distributed Transducers	69
3.1 Introduction	69
3.2 Control System Synthesis Based on the Lyapunov Direct Method	70
3.3 Control System Synthesis for Beams	71
3.3.1 Collocated Distributed Transducers and Lyapunov Control	74
3.3.2 Performance Limitations of Control Designs with Shaded Distributions	76

3.3.3	Performance Limitations of Uniformly Shaded Transducers	76
3.3.4	Performance Limitations of Linearly Shaded Transducers	80
3.3.5	Design Guidelines on Spatial Shading for Vibration Control	81
3.4	Control System Synthesis for Plates	84
3.4.1	Performance Limitations of Uniformly Shaded Actuators for Plates	86
3.4.2	Performance Limitations of Non-uniformly Shaded Actuators for Plates	92
3.4.3	The Unique Compatibility of Distributed Transducers for Arbitrary Spatial Shadings	94
3.5	Summary	95
	Notes	95
	Problems	96
4	Multi-Dimensional Transforms and MIMO Representations of Smart Structures	101
4.1	Introduction	101
4.2	Convolution and the Spatially Distributed Plant	105
4.2.1	Green's Function Representations for Temporally Stationary Systems	107
4.3	Multi-Input Multi-Output (MIMO) Representations of Smart Structures	113
	Problems	119
5	Performance Measures for Smart Structures with MIMO Representations	121
5.1	Introduction	121
5.2	Performance Metrics	121
5.3	Assessment of Performance Metrics Using Singular Values	124
5.3.1	Command Following	124
5.3.2	Disturbance Rejection	127
5.3.3	Sensor Noise	128
5.4	Metrics for Controllability and Observability	128
5.4.1	Controllability	129
5.4.2	Observability	130
5.5	Example: Active Damping of a Simply Supported Beam	130
5.5.1	Spatially Uniform Actuator Distributions	131
5.5.2	Linear or "Ramp" Actuator Distributions	133
5.6	Metrics for Achieving Stability and Robustness for Control of Smart Structures	137
5.6.1	Additive Error Uncertainty	139
5.6.2	Multiplicative Error Uncertainty	141
5.7	Summary	142
	Notes	142
	Problems	143

6 Shape Control: Distributed Transducer Design 145

6.1 Introduction 145

6.2 Shape Control and the Notion of Discrete Spatial Bandwidth 146

6.2.1 Orthonormal Expansions and the Discrete Spatial Transform . 147

6.2.2 Minimization of the Integrated Mean Square Profile Error . 149

6.3 Plant Representations in Terms of an Expansion Basis Set 151

6.3.1 The Generic Green’s Function Representation 151

6.3.2 The Symmetric Green’s Function Representation 153

6.4 Input/Output Coupling and Transducer Shading 155

6.4.1 The Singular Value Decomposition and
Performance Metrics for Shape Control 156

6.5 Spatially Distributed Sensors and Shape Estimation 162

6.6 Summary 166

7 Shape Control, Modal Representations and Truncated Plants 167

7.1 Introduction 167

7.2 Shape Error and Feed Forward Correction 167

7.3 A Complete Dynamic Shape Control Case Study 173

7.3.1 Case Background 173

7.3.2 Airfoil Shapes and the Discrete Spectrum Parameterization . 174

7.3.3 The Concept of Eigenfoils 176

7.3.4 Morphing Airfoil Design Considerations 178

7.3.5 Actuator Placement and Input/Output Coupling 179

7.3.6 Morphing Airfoil Rib: Discrete Parameterization
and the System Model 182

7.3.7 State Space Canonical Form 183

7.3.8 Morphing Airfoil Closed Loop Shape Controller Synthesis . 184

7.3.9 Morphing Airfoil Closed Loop Shape Control Simulation . 191

7.4 Summary 195

Problems 196

References 199
