Preface to this 6th English edition — vii

Preface to the 5th English edition — viii

Preface to the 4th English edition — ix

Preface to the 3rd English edition — x

Preface to the 2nd English edition — xi

Preface to the first English edition — xii

Preface to the first German edition — xiii

1 Introduction — 1

- 1.1 Historical Overview — 1
- 1.2 New Developments — 12
 - 1.2.1 Polymer-Bonded Explosives — 12
 - 1.2.2 New High (Secondary) Explosives — 17
 - 1.2.3 New Primary Explosives — 27
 - 1.2.4 New Oxidizers for Solid Rocket Motors — 37
 - 1.2.5 Initial Characterization of New Energetic Materials — 44
- 1.3 Definitions — 45
- 1.4 Combustion, Deflagration, Detonation – A Short Introduction — 54
 - 1.4.1 Fire and Combustion — 54
 - 1.4.2 Deflagration and Detonation — 56

2 Classification of Energetic Materials — 59

- 2.1 Primary Explosives — 59
- 2.2 High (Secondary) Explosives — 64
- 2.3 Propellant Charges — 75
- 2.4 Rocket Propellants — 78
 - 2.4.1 Chemical Thermal Propulsion (CTP) — 101
- 2.5 Pyrotechnics — 102
 - 2.5.1 Detonators, Initiators, Delay Compositions and Heat-Generating Pyrotechnics — 102
 - 2.5.2 Light-Generating Pyrotechnics — 107
 - 2.5.3 Decoy Flares — 119

2.5.4	Smoke Munitions —	125
2.5.5	Near-Infrared (NIR) Compositions —	137
3	Detonation, Detonation Velocity and Detonation Pressure —	141
4	Thermodynamics —	157
4.1	Theoretical Basis —	157
4.2	Computational Methods —	164
4.2.1	Thermodynamics —	164
4.2.2	Detonation Parameters —	168
4.2.3	Combustion Parameters —	172
4.2.4	Example: Theoretical Evaluation of New Solid Rocket Propellants —	185
4.2.5	Example: EXPLO5 Calculation of the Gun Propellant Properties of Single, Double and Triple Base Propellants —	195
4.2.6	Semiempirical Calculations (EMDB) —	197
5	Initiation —	201
5.1	Introduction —	201
5.2	Ignition and Initiation of Energetic Materials —	203
5.3	Laser Ignition and Initiation —	205
5.4	Electric Detonators —	211
6	Experimental Characterization of Explosives —	215
6.1	Sensitivities —	215
6.2	Long-Term Stabilities —	242
6.3	Insensitive Munitions —	244
6.4	Gap Test —	246
6.5	Classification —	247
6.6	Trauzl Test —	249
6.7	Aging of Energetic Materials —	252
7	Special Aspects of Explosives —	263
7.1	Shaped Charges —	263
7.2	Detonation Velocities —	273
7.3	Gurney Model —	279
7.3.1	Example: Calculation of the Gurney Velocity for a General Purpose Bomb —	287
7.4	Plate Dent Tests vs. Fragment Velocities —	288
7.5	Underwater explosions —	295
7.6	The Detonation Velocity of Mixtures of Solid Explosives with Non-Explosive Liquids —	300

8	Correlation between the Electrostatic Potential and the Impact Sensitivity — 305
8.1	Electrostatic Potentials — 305
8.2	Volume-Based Sensitivities — 308
9	Design of Novel Energetic Materials — 311
9.1	Classification — 311
9.2	Polynitrogen Compounds — 313
9.3	High-Nitrogen Compounds — 321
9.3.1	Tetrazole and Dinitramide Chemistry — 322
9.3.2	Tetrazole, Tetrazine and Trinitroethyl Chemistry — 328
9.3.3	Ionic Liquids — 333
9.4	Dinitroguanidine Derivatives — 337
9.5	Co-Crystallization — 339
9.6	Future Energetics — 340
9.7	Detonation Velocities from Laser-induced Air Shock — 370
9.8	Thermally Stable Explosives — 375
10	Synthesis of Energetic Materials — 385
10.1	Molecular Building Blocks — 385
10.2	Nitration Reactions — 386
10.3	Processing — 391
10.4	Safe Handling of Spent Acid — 392
11	Safe Handling of Energetic Materials in the Laboratory — 397
11.1	General — 397
11.2	Protective Equipment — 398
11.3	Laboratory Equipment — 401
12	Energetic Materials of the Future — 403
13	Related Topics — 413
13.1	Thermobaric Weapons — 413
13.2	Agent Defeat Weapons — 422
13.3	Nanothermites — 424
13.3.1	Example: Iron Oxide / Aluminum Thermite — 431
13.3.2	Example: Copper Oxide / Aluminum Thermite — 432
13.3.3	Example: Molybdenum Trioxide / Aluminum Thermite — 433
13.4	Homemade Explosives — 433
13.5	Explosive Welding — 434
13.6	Gas Generators (Airbags) — 435
13.7	Toxicity Measurements — 439

13.8	Energetic MOFs (EMOFs) —	443
13.9	Civil Explosives and Boosters —	448
13.10	Structured Reactive Materials (SRM) —	452
13.11	3D Printing of Explosives —	459
14	Study Questions —	465
15	Literature —	471
16	Appendix —	483
	Important reaction types in organic nitrogen chemistry —	483
	Curing of a diol (HTPB) with isocyanate binder —	487
	Important reaction types in inorganic nitrogen chemistry —	487
	Collection of formulas —	497
	Author —	503
	Index —	505
