Preface — VII

1	Fundamental concepts — 1
1.1	Introduction — 1
1.2	Inner products — 1
1.3	Strong and weak convergence — 13
1.4	The space $L_2(\mathbb{R})$ — 16
1.5	A glance at linear operators — 28
1.6	The adjoint of an operator — 29
2	Fourier series — 37
2.1	Convolution — 60
2.2	Fourier transform on $\mathbb{R}$ — 67
2.3	Fourier transform on $L_2(\mathbb{R})$ — 80
2.4	Definition of the Fourier transform in $L_2(\mathbb{R})$ — 83
2.5	Fourier transform on $L_1(\mathbb{R}^n)$ — 86
2.6	Bessel functions — 89
3	Schwartz spaces $\mathcal{S}(\mathbb{R}^n)$ — 95
3.1	Definition of the Fourier transform in $L_2(\mathbb{R}^n)$ — 114
3.2	Some applications of the Fourier transform to partial differential equations — 118
4	Distribution functions — 129
4.1	Extending the Fourier transform to $L_p(\mathbb{R}^n)$ — 132
4.2	Covering lemma — 145
4.3	Maximal function — 146
4.4	Weak- L_p space — 150
4.5	Lebesgue differentiation theorem — 152
4.6	Cube — 159
4.7	Properties of dyadic subcubes — 160
4.8	Calderón–Zygmund decomposition — 160
4.9	Operators of type (p, q) — 164
4.10	Marcinkiewicz interpolation theorem — 165
4.11	The Cauchy principal value — 167
5	Three-fold approach to the Hilbert transform — 171
5.1	Derivation of the Hilbert transform on $\mathbb{R}$ — 171
5.2	The Hilbert transform — 177
5.3	The Hilbert transform on the circle — 181

5.4	Calderón–Zygmund singular integral operators —	187
5.5	Some Hilbert transforms —	197
5.5.1	Hilbert transform of a constant function —	197
5.5.2	Hilbert transform of $\sin x$ and $\cos x$ —	198
5.5.3	Hilbert transform of e^{ix} —	199
5.6	Relationship between the Hilbert and Laplace transforms —	200
5.6.1	The Hilbert transform of $\frac{1}{x+i0}$ and the Poisson kernel —	202
5.7	Hilbert transform of a periodic function —	205
5.8	Properties —	211
6	Hilbert transform in $L_2(\mathbb{R})$ —	217
6.1	Hilbert transform of a product —	217
6.2	Differentiation property of the Hilbert transform in L_2 —	224
6.3	Hilbert transform as an operator in L_2 —	225
6.4	The Parseval-type form —	227
6.5	A theorem due to E. M. Stein and G. Weiss —	230
7	Embedding and strong L_p boundedness for the Hilbert transform —	243
7.1	Strong L_p boundedness for the Hilbert transform on the circle —	254
8	Riesz transform —	261
8.1	Vectorial Riesz transform —	274
A	Appendix —	277
A.1	Convergence in measure —	277
Bibliography —		289
Index —		291
