Vorwort	iii
Abstract	v
Zusammenfassung	vii
1 Introduction	1
1.1 The Structure and Objectives of this Thesis	6
1.2 Previous Publication of Results and Content	9
2 Background and Principles	11
2.1 Water Desalination and Selective Ion Removal	12
2.1.1 Water Removal	13
2.1.2 Salt Removal	17
2.2 Flow-Electrode Capacitive Deionization	20
2.2.1 Materials	21
2.2.2 Designs and Applications	22
2.3 Transport in Ion-Exchange Membranes	23
2.4 Electrical Double Layer	25
2.5 Diffusion Coefficients and Ion Mobility	27
2.6 Transport in and at Chargeable Particles	28
2.6.1 Diffusion into Particles	29
2.6.2 Rheology of Suspensions	30
2.6.3 Particles in an Electric Field	31
2.7 Electrochemical Impedance Spectroscopy	32
2.8 Calculation of Parameters	35
2.9 Simulation Models	37
2.9.1 Capacitive Deionization	38
2.9.2 Membrane Capacitive Deionization	39
2.9.3 Flow-electrode Capacitive Deionization	39
3 Optical Analysis of Charged Particles in an Electric Field	41
3.1 Introduction	42
3.2 Materials and Methods	43
3.2.1 Flow Electrode Optics Chip	45

3.2.2	Chip Production	46
3.2.3	μ -FCDI Experiments	46
3.2.4	Optics Experiments	48
3.2.5	Image Analysis Algorithm	48
3.3	Percolation Phenomena in μ -FCDI	49
3.3.1	Desalination	50
3.3.2	Fluorescent Tracers and Rheology	51
3.3.3	Electrochemical Examination of Reactions	52
3.4	Optical Particle Analysis	54
3.4.1	Electrical Current at Different Flow Rates	57
3.5	Conclusion	58
4	Membrane Electrode Assemblies for FCDI: The Single Point of Contact	61
4.1	Introduction	62
4.2	Experimental	63
4.2.1	Manufacture of Membrane Electrode Assemblies	63
4.2.2	FCDI Modules	64
4.2.3	Ion-Exchange Capacity	65
4.2.4	Electrochemical Impedance Spectroscopy	67
4.2.5	Operation of FCDI Experiments	68
4.3	Results and Discussion	69
4.3.1	MEA production	70
4.3.2	MEA Swelling Behavior	70
4.3.3	Results: SEM Images of MEAs	74
4.3.4	MEA IEC	74
4.3.5	MEA EIS	75
4.3.6	MEA FCDI Module Implementation	77
4.3.7	Desalination Experiments	77
4.4	Conclusion	80
5	Controlling Osmosis and pH in Electrically-driven Deionization	83
5.1	Introduction	84
5.2	Experimental	85
5.2.1	Module Setup	85
5.2.2	Experimental Procedure	86
5.2.3	Calculation of Fluxes	87

5.2.4	Determination of the Acid Neutralization Capacity	89
5.3	Results and Discussion	89
5.3.1	Electro-Osmosis and Osmosis	89
5.3.2	pH Development in Diluate and Concentrate	95
5.3.3	Controlling the pH	104
5.4	Conclusion	105
6	Counter Ion Separation in FCDI	109
6.1	Introduction	110
6.2	Experimental	111
6.2.1	Module Setup	111
6.2.2	Experimental Procedure	112
6.2.3	Comparing Different Ion Pairs	113
6.2.4	Different Process Parameters for Nitrate in the FCDI Setup	114
6.2.5	Simulation of Multiple Ions in FCDI	115
6.2.6	Selectivity	116
6.3	Results and Discussion	117
6.3.1	Desalination Experiments	117
6.3.2	Selectivity	120
6.3.3	Impact of Driving Forces on the Selectivity	123
6.4	Conclusion	126
7	New Insights for FCDI Scale-up	129
7.1	Introduction	130
7.2	2D Simulation of FCDI Modules	131
7.2.1	Materials and Methods	131
7.2.2	Results	135
7.2.3	Membrane Size	145
7.3	Stacking FCDI MEA Modules	149
7.3.1	Materials and Methods	149
7.3.2	Results	151
7.4	Conclusion	157
8	Summary	159
8.1	Reflections	160
8.2	Open Research Questions and Future Perspectives	164
8.2.1	Flow Electrodes	164

8.2.2	Transport	166
8.2.3	Scale-up and Application	168
Bibliography		171
