

Table of Contents

Abstract..... VII

Kurzfassung..... VIII

Table of Contents IX

List of Abbreviations XIII

List of Symbols..... XV

1. Introduction 1

 1.1. District Heating 3

 1.2. Problem Statement and Objective, Hypothesis..... 4

 1.3. Research Approach 5

2. State of the Art 7

 2.1. Technology 7

 2.1.1. Fifth Generation District Heating and Cooling Networks..... 9

 2.1.2. Supply and Demand 12

 2.1.3. Transport and Storage..... 13

 2.1.4. Existing 5GDHCNs 16

 2.2. Software 26

 2.2.1. TRNSYS 28

 2.2.2. DYMOLA 28

 2.2.3. BCVTB..... 30

3. Methodology 31

 3.1. Building Services Model 33

 3.1.1. Solar Loop 35

 3.1.2. Heating Loop and Secondary Loop..... 36

 3.1.3. Primary Loop 38

 3.2. Interlink Zone 39

 3.3. Network and Storage Model 40

 3.3.1. BCVTB Interface and BUS-System..... 42

 3.3.2. Building Simulation Interface 43

 3.3.3. Piping Model 46

 3.3.4. Seasonal Storage 47

3.4. Traditional district heating network model	48
4. Simulation.....	53
4.1. Case Study: Ecological Model Settlement	53
4.2. Heating Demand	57
4.3. Scenarios	58
4.3.1. Baseline	59
4.3.2. Network Typology.....	60
4.3.3. Network Heat-load Density.....	62
4.3.4. Feed-in of Waste Heat	63
4.3.5. Network Pipe Insulation Thickness	64
4.3.6. Traditional District Heating Network	64
4.4. Results	65
4.4.1. Baseline	66
4.4.2. Network Typology.....	75
4.4.3. Network Heat-load Density.....	80
4.4.4. Feed-in of Waste Heat	89
4.4.5. Network Pipe Insulation Thickness	96
4.4.6. Traditional District Heating Network	99
4.5. Previous study and results	105
4.5.1. Standard HW and DHW Demand.....	106
4.5.2. Low HW Demand.....	107
4.5.3. High HW Demand	108
4.5.4. Low DHW Demand	109
4.5.5. High DHW Demand	110
5. Economics.....	111
5.1. Cost Parameter Calculation	111
5.2. Profitability Calculation	111
5.3. Results Profitability Analysis	113
5.3.1. Line Network.....	113
5.3.2. Ring Network.....	115
5.3.3. Mesh Network	117
5.3.4. Waste Heat Network.....	119
5.4. Discussion.....	120
6. Discussion	125
6.1. Impact of parameters.....	126

6.1.1. DHW demand	126
6.1.2. Network Typology	127
6.1.3. Pipe Size	128
6.1.4. Network Heat-load Density and Network Size.....	129
6.1.5. Waste Heat Share.....	131
6.1.6. Pipe Insulation Thickness	132
6.1.7. Pump Energy Demand.....	133
6.2. Which system is best?	136
6.2.1. Specific Thermal Losses.....	137
6.2.2. Specific Total Losses.....	137
6.2.3. Ratio of Turnover of Renewable Energy to Non-Renewable Energy	138
6.2.4. CO ₂ -equivalent per year	139
6.2.5. Annual System COP	139
6.2.6. Profitability.....	140
6.2.7. Centralized versus Decentralized Heat Sources	140
6.3. Hypothesis Revisited: Carbon-neutral district.....	143
6.4. Critique	143
7. Conclusion and Outlook	147
7.1. Summary	148
7.2. Outlook	149
List of References.....	155
List of Figures.....	171
List of Tables	179
A. Appendix of Figures	181
B. Appendix of Tables.....	187
C. Acknowledgments.....	199
