

# Contents

Design and Construction of Structures	4
<b>Part A Fundamentals</b>	
The Role of Structures	14
Historical and Scientific Background	14
Forces, Loads and Other Actions	16
Forces on Structures, Assumed Loads	17
Structural Design, Load Transfer	25
External Loads – Internal Forces: Stresses	29
Safety Concept	31
Building Materials, Properties, Load Resistance	32
<b>Part B Structural Elements</b>	
Structural Elements Under Tension	40
Structural Elements Under Compression	47
Structural Elements Subject to Bending Stresses	54
Overview of the Pre-dimensioning of Structural Elements	63
<b>Part C Structural Systems</b>	
From Element to System	66
Trusses	68
Trussed Beams	78
Cable Beams	81
Cable Trusses	82
Cable-stayed Beams	82
Arches	84
Strutted Frames	87
King and Queen-post Trusses	87
Frames and Trussed Frames	88
Rigid Frame Trusses	91
Girder Grids and Truss Grids	92
Space Frames	93
Overview of Support Elements and Support Systems	94
<b>Part D Complex Structures</b>	
Historical Structures	100
Bridges with Extreme Spans	108
Structures for Tall Buildings	116
Shells and Gridshells for Long-span Roofs	122
Membrane and Air-inflated Structures	130
Mobile, Convertible and Adaptive Structures	136
Potential Offered by New Technologies and Building Materials	142
Efficiency and Sustainability of Materials and Structures	150
<b>Part E Built Examples</b>	
Twenty-one Example Projects	160
<b>Appendix</b>	
Standards, Guidelines	250
Bibliography / Acknowledgements	251
Picture Credits	252
Subject Index	254
Authors	256
