1	Analysis of matter: IT for life sciences, natural sciences, technological progress, and quality assurance — 1
1.1	The question — 1
1.1.1	Define what is to be measured — 1
1.1.2	How important is this analysis? — 2
1.1.3	What is the sample, how is it sampled, and how does it get to the lab? — 2
1.1.4	Analytical diversity — 2
1.2	The answer — 2
1.2.1	Measurand — 3
1.2.2	Trueness — 4
1.2.3	Repeatability and precision — 4
1.2.4	Sensitivity — 5
1.2.5	Limit of detection — 5
1.2.6	Calibration — 6
1.2.7	Working range — 9
1.2.8	Selectivity, specificity, interferences — 10
1.2.9	Ruggedness — 11
1.2.10	Time of analysis — 11
1.2.11	Importance of the results — 12
1.2.12	Post analysis details — 12
1.3	The race between scientific idea, technical realization, application, and international standard — 13
1.4	Appearance and development of analytical methods: a historic overview — 15
1.5	Physics or chemistry: the periodic change of the yellow jersey — 23
	Literature — 25
2	Information based on physical methods — 27
2.1	Optical spectroscopy — 27
2.1.1	Electromagnetic waves — 27
2.1.2	Interaction of photons with electrons — 28
2.1.3	Generation of light for optical spectroscopy — 30
2.1.4	Wavelength selection — 36
2.1.4.1	Basic considerations of wavelength separation by a grating — 38
2.1.4.2	Monochromator — 41
2.1.4.3	Polychromators — 43
2.1.4.4	Filter photometer — 47
2.1.4.5	Optics for X-rays — 48

2.1.5	Electrical current or voltage: indicator for analytical information — 48
2.1.6	Generation of atoms for elemental analysis — 53
2.1.6.1	Nebulizers — 53
2.1.6.2	Atomizers/ionizers — 56
2.1.7	Quantitative detection of atoms: atomic absorption spectrometry (AAS) — 69
2.1.7.1	Basic principles of atomic absorption spectrometry (AAS) — 69
2.1.7.2	Technical means to facilitate AAS — 73
2.1.7.3	Chemistry in AAS — 97
2.1.7.4	Instrument suitability — 103
2.1.7.5	Application examples — 111
2.1.8	Quantitative detection of atoms: atomic fluorescence spectrometry (AFS) — 116
2.1.8.1	The fluorescence process — 116
2.1.8.2	Instrument setup — 117
2.1.8.3	Application example: the determination of mercury with the cold vapor technique and atomic fluorescence spectrometry (AFS) — 120
2.1.9	Quantitative detection of atoms: optical emission spectrometry (OES) — 123
2.1.9.1	Basic considerations of emission spectra of atoms — 123
2.1.9.2	Spectral issues — 125
2.1.9.3	Separation of analyte and matrix lines — 125
2.1.9.4	Signal to noise from a spectral viewpoint — 126
2.1.9.5	Collecting photons — 128
2.1.9.6	Sample and plasma — 130
2.1.9.7	Simultaneous versus sequential determination of lines — 130
2.1.9.8	Calibration in OES spectrometry — 133
2.1.9.9	Method development in optical emission spectrometry — 135
2.1.9.10	Application examples — 138
2.1.10	UV/VIS molecular spectroscopy — 143
2.1.10.1	General remarks — 143
2.1.10.2	Technical layout — 144
2.1.10.3	Specifications and instrument performance verification — 149
2.1.10.4	Selected application examples — 152
2.1.11	NIR and IR molecular spectroscopy — 160
2.1.11.1	General remarks — 160
2.1.11.2	Basic instrumental setup — 162
2.1.11.3	Presentation of the sample — 162
2.1.11.4	IT for infrared spectroscopy — 165
2.1.11.5	FTIR coupled with microscopy — 166
2.1.11.6	N-IR spectroscopy — 168

2.1.11.7	F-IR spectroscopy — 168
2.1.11.8	ATR infrared spektroskopie — 169
2.1.11.9	An example of quantitative determination — 169
2.1.12	Raman spectroscopy — 170
2.1.12.1	General remarks — 170
2.1.12.2	Technical layout — 173
2.1.12.3	Application — 175
2.1.13	Molecular fluorescence — 176
2.1.13.1	Fundamental considerations — 176
2.1.13.2	Technical layout — 178
2.1.13.3	Measurement correction — 180
2.1.13.4	Phosphorescence and chemiluminescence — 181
2.1.13.5	An application example — 182
2.2	Mass spectrometry — 184
2.2.1	Fundamental considerations — 184
2.2.2	Instrument setup — 185
2.2.3	Figures of merit in mass spectrometry — 192
2.2.4	Mass spectrometry of the elements — 196
2.2.5	Mass spectrometry of molecules — 199
2.2.6	Isotopic analysis — 204
2.3	Quantitative detection of atoms: spectroscopy based on X-rays — 209
2.3.1	General considerations and fundamentals of X-ray fluorescence spectroscopy — 209
2.3.2	Technical setup of X-ray fluorescence spectrometers — 211
2.3.3	Quantitative analysis with XRF — 219
2.3.4	Typical applications — 223
2.4	Quantitative analysis based on electrochemical methods — 225
2.4.1	General considerations — 225
2.4.2	Classification of electroanalytical methods — 228
2.4.3	Apparatus and software — 232
	Literature — 235
3	Analytical information using chemical and biochemical methods — 241
3.1	Separation techniques — 241
3.1.1	General remarks — 241
3.1.2	Sample preparation — 242
3.1.3	Separation — 244
3.2	Basic concepts in chromatographic processes — 246
3.3	Ion chromatography — 250
3.3.1	General remarks — 250
3.3.2	Chemistry of ion exchange — 252

3.3.3	Ion exclusion chromatography (HPICE) —	253
3.3.4	Mobile phase ion chromatography (MPIC) —	254
3.3.5	Instrumental setup and technical parameters of ion chromatography —	255
3.3.6	The analytical process of an IC analysis —	257
3.3.7	Application example —	258
3.4	HPLC —	260
3.5	Gas chromatography —	262
3.6	Other separation methods —	269
3.6.1	Supercritical fluid chromatography (SFC) —	269
3.6.2	Field flow fractionation (FFF) —	270
3.6.3	Electrophoresis —	272
3.6.4	Thin layer chromatography (TLC) —	273
3.6.5	Paper chromatography —	274
3.7	Preconcentration and amplification —	274
	Literature —	281

Index —	283
