Preface — VII

1	Probability Distributions — 1
1.1	Basic Probability Concepts — 1
1.1.1	Collection of Events — 1
1.1.2	Random Variables — 4
1.1.3	Distribution Function — 5
1.1.4	Some Moments — 6
1.1.5	Independence — 8
1.2	Probability Distributions — 8
1.2.1	Binomial Distribution — 8
1.2.2	Application: Games of Chance — 10
1.2.3	Poisson Distribution — 13
1.2.4	Application: Credit Default Swap — 17
1.2.5	Uniform Distribution — 17
1.2.6	Normal Distribution — 18
1.2.7	Related Distributions — 20
1.3	Estimation and Hypothesis Testing — 22
1.3.1	Statistical Testing — 25
2	Simple Linear Regression — 28
2.1	Simple Linear Regression — 28
2.2	OLS Method — 31
2.2.1	Forecasting — 38
2.3	Gauss–Markov Theorem — 40
2.4	Decomposition — 43
2.5	Stock Index Futures — 46
2.5.1	Cost of Carry Model — 47
2.6	Hedging — 54
3	Capital Asset Pricing Model — 57
3.1	Expected Utility Theory — 57
3.1.1	Choices Under Uncertainty — 58
3.2	Utility Functions — 62
3.2.1	Taylor Series Expansion — 64
3.2.2	Maclaurin Series — 66
3.3	Risk Aversion — 66
3.3.1	Application of VM Expected Utility — 69
3.3.2	Value of Information — 69
3.4	Single-Period CAPM — 71

- 3.4.1 Estimation — 76
- 3.4.2 Application: CAPM Regression — 78
- 3.4.3 Interpretation of Regression Results — 80
- 3.4.4 Testing — 83
- 3.5 Performance Measures — 85

4 Event Studies — 90

- 4.1 Set Operations — 90
 - 4.1.1 Bayes' Formula — 91
- 4.2 Market Efficiency — 92
- 4.3 Conditional Expectation — 94
 - 4.3.1 Application: Value-at-Risk — 97
- 4.4 Moving Across Time — 98
 - 4.4.1 Law of Iterated Expectations — 105
 - 4.4.2 Application: Asset Pricing — 106
- 4.5 Events — 108
 - 4.5.1 Testing Framework — 109
 - 4.5.2 Benchmark — 110
 - 4.5.3 Test Statistics — 115
- 4.6 Case Study: Bank of America Acquires Merrill Lynch — 119

5 Time Series Modeling — 123

- 5.1 Stochastic Process — 123
 - 5.1.1 Some Important Inequalities — 124
- 5.2 Law of Large Numbers — 124
 - 5.2.1 Convergence Concepts — 125
- 5.3 Central Limit Theorem — 131
 - 5.3.1 Applications — 134
- 5.4 Stock Return Rates — 135
 - 5.4.1 Test of Normality — 137
 - 5.4.2 Case Study: American Express Company Stock Returns — 137
- 5.5 Time Series Models — 140
- 5.6 Autoregressive Process — 143
- 5.7 Moving Average Process — 145
- 5.8 Autoregressive Moving Average Process — 145
 - 5.8.1 Changing Conditional Means — 146
- 5.9 Sample Autocorrelation Function — 147
- 5.10 Test of Zero Autocorrelations for AR(1) — 149
 - 5.10.1 Invertible MA Processes — 151
 - 5.10.2 Yule-Walker Equations — 152
- 5.11 Partial Autocorrelation Function — 153
 - 5.11.1 Application: GDP Growth — 155

5.12	Autoregressive Integrated Moving Average Process — 157
5.12.1	Application: Modeling Inflation Rates — 158
6	Multiple Linear Regression — 161
6.1	Multiple Linear Regression — 161
6.1.1	Partial Correlation Coefficient — 162
6.1.2	Least Squares Theory — 164
6.1.3	Properties of OLS Estimators — 165
6.2	Tests of Restrictions — 166
6.3	Forecasting — 172
6.4	Misspecification with Disturbances — 173
6.4.1	Heteroskedasticity — 175
6.4.2	Serial Correlation — 180
6.5	Misspecification with Explanatory Variable — 183
6.5.1	Exclusion of Relevant Explanatory Variables — 183
6.5.2	Inclusion of Irrelevant Explanatory Variables — 184
6.5.3	Multi-collinearity — 185
6.5.4	Nonstationarity — 186
6.6	Misspecification of Independence between X and U — 186
6.6.1	Contemporaneous Zero Correlation but Stochastic Dependence — 186
6.6.2	Contemporaneous Non-Zero Correlation — 187
6.7	Measurement Error Problem — 188
6.7.1	Simultaneous Equations Model — 188
6.8	Instrumental Variables — 189
6.9	Misspecification with Coefficients — 190
7	Multi-Factor Asset Pricing — 192
7.1	Arbitrage Pricing Theory — 193
7.2	Merton's Intertemporal CAPM — 196
7.3	Estimating and Testing Multi-Factor Models — 201
7.3.1	Fama-MacBeth Method — 203
7.3.2	Cross-Sectional Regressions — 208
7.3.3	Fama-French Three Factor Model — 211
7.4	Forecasting Returns — 215
7.5	Anomalies and Behavioral Finance — 216
7.6	Calendar Effect Anomalies — 220
7.6.1	Day-of-the-Week Effect — 221
7.6.2	Test of Equality of Means — 224
7.6.3	Analysis of Variance — 225
8	Euler Condition for Asset Pricing — 227
8.1	Method of Moments — 228

8.2	Consumption-Based Asset Pricing — 233
8.3	Generalized Method of Moments (GMM) — 237
8.4	Estimating Preference Parameters in Euler Equation — 242
8.5	Other GMM Applications — 244
9	Maximum Likelihood Methods — 250
9.1	Introduction — 250
9.2	Maximum Likelihood Estimators — 252
9.3	Cramer–Rao Lower Bound and Asymptotic Efficiency — 257
9.4	Likelihood Ratio Test — 258
9.5	ARCH-GARCH — 259
9.6	Estimating GARCH — 266
9.6.1	Stationarity Condition — 266
9.6.2	Maximum Likelihood Estimation — 267
9.6.3	GMM — 271
9.6.4	Diagnostic for ARCH-GARCH — 272
9.7	Applications — 274
9.7.1	Euler Equation Revisited — 274
9.7.2	Volatility Clustering and Exchange Margin Setting — 275
10	Unit Roots and Cointegration — 278
10.1	Non-Stationary Process — 278
10.2	Spurious Regression — 281
10.3	Unit Root Test — 284
10.4	Test-Statistic Distribution — 288
10.5	Purchasing Power Parity — 292
10.6	Cointegration — 297
11	Bond Prices and Interest Rate Models — 306
11.1	Interest Rates — 306
11.2	No-Arbitrage Dynamics of Spot Rate Curve — 308
11.3	Principal Component Analysis — 313
11.4	Continuous-Time Short Rate Models — 316
11.5	Estimation of Discretized Models — 320
11.5.1	Black-Derman-Toy Model — 325
11.6	Credit Spreads — 327
12	Option Pricing and Implied Moments — 330
12.1	Itô’s Calculus — 330
12.2	Martingale Method For Black-Scholes Formula — 331
12.3	Greeks — 334
12.3.1	Delta Hedging — 338

- 12.4 Numerical Method in Option Pricing and Hedging — 340
- 12.5 Implied Volatility — 348
- 12.6 Model-Free Volatility — 349
 - 12.6.1 Term Structure of Model-Free Volatility — 350
 - 12.6.2 Information in Model-Free Volatility — 355
- 12.7 The Bakshi-Kapadia-Madan (BKM) Model — 365
- 12.8 Intraday Moments and Trading — 368
 - 12.8.1 Forecasting Performance — 371
 - 12.8.2 Error Metrics — 372
 - 12.8.3 Option Trading Strategies — 374

List of Figures — 379

List of Tables — 381

About the Author — 383

Index — 385
