Preface of the Editor iii

Preface of the Author..... v

Symbols xi

 Greek and Latin letters..... xiv

1 Introduction.....1

 1.1 Motivation and purpose..... 1

 1.2 Methodology..... 3

 Material acquisition, preparation, and testing..... 3

 Statistical analyses of the experimental data 3

 Assessing the potentials of *Gmelina arborea* from Nigeria as a construction material
 3

 Application 3

 1.3 Scope / study Area 4

 Thesis structure 5

2 Material: State of the Art7

 2.1 The structure of wood..... 7

 2.1.1 Type of wood cells and their function 8

 2.1.2 The cell / cell wall structure10

 2.2 Factors affecting the strength of timber11

 2.2.1 Knots11

 2.2.2 Angle of grain12

 2.2.3 Reaction wood13

 2.2.4 Moisture content.....13

 2.3 *Gmelina arborea*.....14

 2.4 Sampling18

 2.4.1 Sampling methods19

 2.4.2 Sample size19

3 Tests and Testing Methods - State of the Art.....21

 3.1 Small clear specimens versus structural-size specimens.....22

 3.2 Small clear- and structural-size specimens: Is there a relationship?23

 3.3 Tensile strength - **ft, o**.....25

3.4	Compressive strength parallel to the grain - <i>fc, 0</i>	30
3.5	Compressive strength perpendicular to the grain - <i>fc, 90</i>	32
3.6	Shear strength - <i>fv</i>	39
3.7	Bending Strength - <i>fm</i>	47
3.8	Embedment Strength - <i>fh</i>	51
3.9	Swelling and shrinkage	56
3.10	Chapter summary	58
4	Statistical Analysis of Samples – Selected Procedures	59
4.1	Statistical distributions	60
4.1.1	The Normal distribution	60
4.1.2	The Lognormal distribution	63
4.1.3	The Weibull distribution	64
4.2	Comparison between the statistical distributions	68
4.3	Methods of fitting statistical distributions to experimental data	70
4.3.1	Graphical methods	70
4.3.2	Non-graphical method: Using a statistical analysis program	74
4.4	Statistical distributions associated with different material properties	75
4.5	Analysis of variance (ANOVA)	76
4.6	Tukey honestly significant difference (HSD) test	78
4.7	Determination of p-values from Test Statistic	79
5	Experimental Investigations	81
5.1	Material acquisition method	81
5.1.1	Material preparation methods	82
5.2	Testing methods	86
5.2.1	Mechanical properties	86
5.2.2	Embedment strength test method	89
5.2.3	Swelling and shrinkage test method	90
5.3	Processing of the experimental data	92
5.3.1	Strength and MoE	92
5.3.2	Embedment strength	94
5.3.3	Swelling and shrinkage	95
5.4	Mechanical test results and discussion	96
5.4.1	Tensile strength and modulus of elasticity parallel to the grain - <i>ft</i> and <i>Et</i>	98

5.4.2 Compressive strength and modulus of elasticity parallel to the grain - <i>fc, 0</i> and <i>Ec, 0</i>	99
5.4.3 Compressive strength and modulus of elasticity perpendicular to the grain - <i>fc, 90</i> and <i>Ec, 90</i>	100
5.4.4 Shear strength - <i>fv</i>	101
5.4.5 Bending strength and modulus of elasticity - <i>fm</i> and <i>Em</i>	102
5.4.6 Density - <i>ρ</i>	102
5.4.7 Mechanical test results based on tree location.	102
5.5 Embedment strength test results	104
5.6 Swelling and shrinkage test results and discussion	104
5.7 Chapter summary and conclusion	107
6 Variation in Mechanical Properties Within and Between <i>Gmelina arborea</i> Trees from Akure, Nigeria	109
6.1 Statistical methods	109
6.2 Analysis of variance and the Tukey HSD test results	110
6.2.1 Within tree variation	110
6.2.2 Between tree variation	113
6.3 Chapter summary and conclusion	115
7 Mechanical Properties of <i>Gmelina arborea</i> from Akure, Nigeria	119
7.1 Determination of the statistical distributions of the experimental datasets ...	120
7.2 Statistical values of <i>Gmelina_Ak</i>	120
7.2.1 Influence of the statistical distributions on the material values	125
7.2.2 <i>Gmelina_Ak</i> and European-grown softwood species	129
7.3 Adjustment of Mechanical Strength Values for Structural Application	132
7.4 Embedment Strength: Equations, Analysis, and Discussion	133
7.4.1 Experimental results and discussion	134
7.4.2 Regression analysis results and discussion	134
7.4.3 Statistical distributions of the embedment strength test series	137
7.4.4 Mean and characteristic strength results and discussion	138
7.5 Relationship between the various material properties	141
7.5.1 Strength – density relationships	141
7.5.2 Elastic moduli – strength relationships	142
7.6 Chapter summary and conclusion	142
8 Application	145

8.1 Structural design according to Eurocode 5145

Example146

Solution146

Review148

8.2 Finite element modelling (FE modelling)148

9 Summary and Outlook153

9.1 Summary.....153

9.2 Limitations of the study and recommendations.....155

10 References.....157

Literature157

Standards.....163

Appendix A: Seasoning of Gmelina Samples.....165

Appendix B: Normality and Homogeneity of Variance Test Results166

Appendix C: Experimental Data.....169

Appendix D: Fitting the Statistical Distributions to the Experimental
Datasets.....207

Appendix E: Gmelina_Ak and Spruce from Specific Populations.....222
