Preface — V

1 Geometry and Geometric Ideas — 1

- 1.1 Geometric Notions, Models and Geometric Spaces — 1
 - 1.1.1 Geometric Notions — 3
- 1.2 Overview of Euclid's Method and Approaches to Geometry — 3
 - 1.2.1 Incidence Geometries – Affine Geometries, Finite Geometries, Projective Geometries — 6
- 1.3 Euclidean Geometry — 7
 - 1.3.1 Birkhoff's Axioms for Euclidean Geometry — 9
- 1.4 Neutral or Absolute Geometry — 9
- 1.5 Euclidean and Hyperbolic Geometry — 12
 - 1.5.1 Consistency of Hyperbolic Geometry — 13
- 1.6 Elliptic Geometry — 14
- 1.7 Differential Geometry — 14
 - 1.7.1 Some Special Curves — 22
 - 1.7.2 The Fundamental Existence and Uniqueness Theorem — 24
 - 1.7.3 Computing Formulas for the Curvature, the Torsion and the Components of Acceleration — 25
 - 1.7.4 Integration of Planar Curves — 27

2 Isometries in Euclidean Vector Spaces and their Classification in $\mathbb{R}^n$ — 31

- 2.1 Isometries and Klein's Erlangen Program — 31
- 2.2 The Isometries of the Euclidean Plane $\mathbb{R}^2$ — 42
- 2.3 The Isometries of the Euclidean Space $\mathbb{R}^3$ — 54
- 2.4 The General Case $\mathbb{R}^n$ with $n \geq 2$ — 61

3 The Conic Sections in the Euclidean Plane — 69

- 3.1 The Conic Sections — 69
- 3.2 Ellipse — 77
- 3.3 Hyperbola — 79
- 3.4 Parabola — 81
- 3.5 The Principal Axis Transformation — 82

4 Special Groups of Planar Isometries — 87

- 4.1 Regular Polygons — 91
- 4.2 Regular Tessellations of the Plane — 93
- 4.3 Groups of Translations in the Plane $\mathbb{R}^2$ — 98
- 4.4 Groups of Isometries of the Plane with Trivial Translation Subgroup — 100

4.5	Frieze Groups —	101
4.6	Planar Crystallographic Groups —	103
4.7	A Non-Periodic Tessellation of the Plane $\mathbb{R}^2$ —	117
5	Graph Theory and Graph Theoretical Problems —	127
5.1	Graph Theory —	127
5.2	Coloring of Planar Graphs —	139
5.3	The Marriage Theorem —	140
5.4	Stable Marriage Problem —	142
5.5	Euler Line —	144
5.6	Hamiltonian Line —	148
5.7	The Traveling Salesman Problem —	151
6	Spherical Geometry and Platonic Solids —	159
6.1	Stereographic Projection —	159
6.2	Platonic Solids —	161
6.2.1	Cube (C) —	163
6.2.2	Tetrahedron (T) —	163
6.2.3	Octahedron (O) —	164
6.2.4	Icosahedron (I) —	165
6.2.5	Dodecahedron (D) —	166
6.3	The Spherical Geometry of the Sphere S^2 —	167
6.4	Classification of the Platonic Solids —	170
7	Linear Fractional Transformation and Planar Hyperbolic Geometry —	177
7.1	Linear Fractional Transformations —	177
7.2	A Model for a Planar Hyperbolic Geometry —	185
7.3	The (Planar) Hyperbolic Theorem of Pythagoras in $\mathbb{H}$ —	189
7.4	The Hyperbolic Area of a Hyperbolic Polygon —	190
8	Simplicial Complexes and Topological Data Analysis —	205
8.1	Simplicial Complexes —	205
8.2	Sperner's Lemma —	209
8.3	Simplicial Homology —	211
8.4	Persistent Homology —	217
9	Combinatorics and Combinatorial Problems —	223
9.1	Combinatorics —	223
9.2	Basic Techniques and the Multiplication Principle —	223
9.3	Sizes of Finite Sets and the Sampling Problem —	228
9.3.1	The Binomial Coefficients —	233
9.3.2	The Occupancy Problem —	236

9.3.3	Some Further Comments —	237
9.4	Multinomial Coefficients —	239
9.5	Sizes of Finite Sets and the Inclusion–Exclusion Principle —	241
9.6	Partitions and Recurrence Relations —	248
9.7	Decompositions of Natural Numbers, Partition Function —	255
9.8	Catalan Numbers —	257
9.9	Generating Functions —	259
9.9.1	Ordinary Generating Functions —	259
9.9.2	Exponential Generating Functions —	269
10	Finite Probability Theory and Bayesian Analysis —	277
10.1	Probabilities and Probability Spaces —	277
10.2	Some Examples of Finite Probabilities —	279
10.3	Random Variables, Distribution Functions and Expectation —	281
10.4	The Law of Large Numbers —	285
10.5	Conditional Probabilities —	288
10.6	The Goat or Monty Hall Problem —	295
10.7	Bayes Nets —	296
11	Boolean Lattices, Boolean Algebras and Stone’s Theorem —	311
11.1	Boolean Algebras and the Algebra of Sets —	311
11.2	The Algebra of Sets and Partial Orders —	311
11.3	Lattices —	318
11.4	Distributive and Modular Lattices —	324
11.5	Boolean Lattices and Stone’s Theorem —	328
11.6	Construction of Boolean Lattices via 0–1 Sequences —	335
11.7	Boolean Rings —	338
11.8	The General Theorem of Stone —	341

Bibliography — 347

Index — 349
