

CONTENTS

Introduction	3		
01. E-Sports gaming centre	6	10. Office building	114
Mass customisation in the fabrication of structure		Use of single structural type across a range of scales and spans	
02. Art gallery	18	11. Hospital and research buildings	126
Integration of facade and structure in a small-scale building		Establishing a project-specific structural design typology	
03. University teaching building	30	12. Medical research cluster	138
Exoskeletons and woven structures		Integration of additions into existing fabric	
04. School building	42	13. Residential tower	150
Scaling structure to create differentiated space		Visual variations of scale in primary steelwork	
05. Research and development building	54	14. Light industrial building	162
The use of reinforced concrete in facades		The 3D digital twin and its use in prefabrication	
06. Light industrial building	66	15. Medical research building	174
Optimisation for fabrication		Structural design from a comparison of typologies	
07. College campus building	78	16. School building	186
Development of an integrated structural system for envelopes		Relationship between facade and structure	
08. Manufacturing building	90	17. Exhibition pavilion	198
The influence of facade panelisation in structural design		Prefabrication and reduction of embodied energy	
09. Sports centre	102	18. Art gallery	210
Visual considerations of structure		Relationship of interior space to structural system
