Table of contents

Authors' preface	ix
List of illustrations	xi
Prologue: the quest for darkness	xiii
1 HOW TO WEIGH GALAXIES	1
Introduction	1
How to weigh galaxies	2
Newtonian gravitation and finding the invisible	2
How to measure stellar motions	4
How galaxies stay inflated	6
Circular motion	7
Random motion	7
The Jeans equations	7
Mass–luminosity relationship	9
Gravitational versus luminous mass	10
2 THE FALSE DAWN	11
Historical background	11
Introducing Oort	12
Oort discovers differential rotation	14
Oort ‘discovers’ disk dark matter	15
The problem with K stars	16
Thin disk and thick disk	17
Bahcall and the resurgence of interest in disk dark matter	17
Oort’s error revealed	18
Not the end of disk dark matter	18
3 SEEING THE INVISIBLE	21
Introducing Zwicky	21
Galaxy clusters	25
Zwicky and Abell cluster catalogues	25
The Coma Cluster	27
Measuring cluster ‘pressure’	28

vi **Table of contents**

	Virial theorem	29
	Mass-luminosity relationship	30
	Results of studying the Coma and Virgo Clusters	31
	Contrast between Oort and Zwicky	32
4	DARK HALOS	35
	How to measure dark matter halos	35
	Beyond the visible disk: the 21-cm line	36
	The first signs of trouble	37
	How to suppress bar structures	38
	The 21-cm limit	40
	Beyond the 21-cm limit	41
	Dark matter in elliptical galaxies	44
	Importance of planetary nebulae	45
	Shape of the dark matter halo	47
	Flaring of the hydrogen disk	48
5	WE ARE SURROUNDED!	49
	Rotation curve of the Milky Way	49
	Escape velocity argument (halo stars)	49
	Objective prism reveals halo stars	51
	Proper motions reveal halo stars	52
	Looking for halo stars in the halo	53
	Timing argument	53
	The Magellanic Clouds and Galactic dark matter	54
	Dark matter in the Large Magellanic Cloud	58
6	PIECES OF THE BIG BANG	59
	About dwarf galaxies	59
	Aaronson's pioneering work	59
	The density of dark halos: Kormendy and Freeman's work	60
	Observing dwarf galaxies	61
	Dark matter in dwarf galaxies	64
	Why do dwarf galaxies have so much dark matter?	64
	Is there a large population of undiscovered dark galaxies?	65
	What should we look for?	66
	Lack of dark matter in globular clusters still a mystery	67
7	COSMIC MIRAGES	69
	How gravity deflects starlight	69
	The mechanics of gravitational lensing	72
	The Einstein radius	72
	Probability of lensing events	73
	Using gravitational lensing to measure dark matter	75
	Strong lensing and the Hubble constant	75

Weak lensing	77
Abell 2218	77
8 THE BARYON INVENTORY	83
Ω (omega) as a common unit of measurement	83
Ω_b	84
Big Bang Nucleosynthesis	84
Observing baryonic matter	85
Observing Ω_b	86
Ω_b at $z = 3$	86
Ω_b in the present epoch	87
Does Ω_b match up?	87
Unseen baryonic matter?	88
Baryonic matter in groups and clusters of galaxies	88
The baryon catastrophe	89
Virgo and Coma baryonic matter compared	90
9 MACHO ASTRONOMY	93
Historical build-up	93
The Great Melbourne Telescope	96
Software development	98
The first MACHO event	98
Looking at the centre of the Galaxy	100
Results	100
Problems and uncertainties	100
Magellanic Stream debris	101
Variable stars, if nothing else	102
Searching for extrasolar planets	102
The future of MACHO	102
10 WHAT CAN THE MATTER BE?	105
Baryonic dark matter: why it is suspected	105
Faint stars	105
Small hydrogen snowballs	106
Massive black holes	106
Small black holes	108
Small dense clouds	109
Brown dwarfs	110
Primordial black holes	110
Between the galaxies	111
How to find intracluster stars	112
Intracluster gas	114
Milgrom's alternative theory of gravity	114

viii **Table of contents**

11	EXPLORING EXOTICA: NEUTRINOS	117
	Why non-baryonic dark matter is suspected	117
	Classes of non-baryonic dark matter	119
	Neutrinos	120
12	EXPLORING EXOTICA: WIMPS AND AXIONS	123
	WIMPs	123
	Fundamental forces and supersymmetry	124
	Supersymmetry	125
	Neutralinos	125
	WIMP searches	126
	Axions	
13	IN THE BEGINNING...	131
	Hot and cold dark matter	131
	Creation of large-scale structure	132
	Cosmic microwave background	133
	HDM or CDM?	135
14	TOWARDS OMEGA	139
	Critical density preferred	139
	An accelerating Universe: dark energy	140
	What is the cosmological constant?	141
	What is vacuum energy?	141
	Cosmological parameters	143
	Constraining Ω_b , Ω_m and Ω_Λ	143
	Could this be it?	145
	Appendix 1 What is matter?	147
	Definition of matter	147
	Macroscopic: cells	148
	Molecules	148
	Elements	149
	Atoms	149
	Structure of the atom: electrons, protons and neutrons	149
	Quarks	150
	Leptons	150
	Energy	150
	Appendix 2 Expressing mass	153
	Index	155
