Preface: Multivariate algorithms and information-based complexity — V

Jeremy Dewar, Mu Tian, and James M. Hyman

- 1 The control variate integration algorithm for multivariate functions defined at scattered data points — 1**

Michael B. Giles, Mario Hefter, Lukas Mayer, and Klaus Ritter

- 2 An adaptive random bit multilevel algorithm for SDEs — 15**

Kerstin Hesse

- 3 RBF-based penalized least-squares approximation of noisy scattered data on the sphere — 33**

Aicke Hinrichs, David Krieg, Erich Novak, Joscha Prochno, and Mario Ullrich

- 4 On the power of random information — 43**

C. J. Oates, J. Cockayne, D. Prangle, T. J. Sullivan, and M. Girolami

- 5 Optimality criteria for probabilistic numerical methods — 65**

G. W. Wasilkowski

- 6 ε -Superposition and truncation dimensions, and multivariate method for ∞ -variate linear problems — 89**

Yuhan Ding, Fred J. Hickernell, Peter Kritzer, and Simon Mak

- 7 Adaptive approximation for multivariate linear problems with inputs lying in a cone — 109**
