Preface — V

1	Introduction to cloud manufacturing — 1
1.1	Background — 1
1.1.1	Challenges confronted by China's manufacturing industry — 1
1.1.2	Problems with the existing network manufacturing models — 2
1.1.3	Development trends of manufacturing industry — 4
1.1.4	Rapid development of emerging technologies — 5
1.2	Concept of cloud manufacturing — 6
1.2.1	Definition — 6
1.2.2	Conceptual model of cloud manufacturing — 7
1.2.3	Characteristics in mode, technology, and business — 7
1.2.4	Service contents — 14
1.2.5	Application mode — 17
1.3	Technology — 17
1.3.1	Supporting technologies — 18
1.3.2	Technology system for cloud manufacturing — 20
1.4	Architecture — 28
1.5	Cloud manufacturing and other related emerging concepts — 30
1.5.1	Cloud manufacturing and cloud computing-based manufacturing — 30
1.5.2	Cloud manufacturing and CPS — 31
1.5.3	Cloud manufacturing and smart manufacturing — 31
1.5.4	Cloud manufacturing, Industry 4.0, and Industrial Internet — 32
1.6	Future perspectives — 35
1.6.1	Academic research — 35
1.6.2	Industrial implementation — 36
1.6.3	Issues needing prompt solutions — 39
1.7	Conclusions and discussions — 39
	References — 40
2	Cloud manufacturing service construction — 42
2.1	Perception and access of manufacturing resources — 42
2.1.1	Perception, access, and adaptation of hard manufacturing resources — 42
2.1.2	Access of soft manufacturing resources — 46
2.1.3	Analysis and processing of data from perception and access — 50
2.2	Virtualization and servitization of manufacturing resources and capabilities — 52
2.2.1	Virtualization of manufacturing resources — 53

2.2.2	Servitization of manufacturing resources and capabilities —	66
2.3	Conclusion —	72
	References —	73
3	Cloud manufacturing service credibility evaluation —	75
3.1	Overview of cloud manufacturing service credibility evaluation —	75
3.2	Credibility evaluation index system for cloud manufacturing service —	78
3.2.1	Principles of credibility evaluation index system construction —	79
3.2.2	Hierarchical credibility evaluation index system —	79
3.3	Direct credibility prediction model based on trading experience and weighted moving average method —	81
3.3.1	Formula of direct credibility prediction solution —	81
3.3.2	Formula of recommendation credibility evaluation solution —	82
3.4	Probabilistic model-based credibility evaluation method for cloud manufacturing services —	84
3.4.1	Evaluation process of 3D printing cloud service —	84
3.4.2	Support technology of the evaluation approach —	87
3.5	Learning model-based credibility evaluation method for cloud manufacturing service —	90
3.5.1	Extreme learning machine —	91
3.5.2	Structure design of the modeling network —	92
3.5.3	Training strategy of the credibility modeling network —	93
3.6	Conclusion —	95
	References —	96
4	Service composition in cloud manufacturing —	99
4.1	Introduction —	99
4.2	Literature review —	99
4.3	Correlation-aware web service composition and QoS computation model in virtual enterprise —	104
4.3.1	Why to consider service correlations? —	104
4.3.2	Description model of correlations among services —	105
4.3.3	Optimal selection of correlation-aware service composition —	112
4.4	Gale–Shapley algorithm-based QoS-aware service composition in cloud manufacturing —	115
4.4.1	QoS utility model for service composition in cloud manufacturing —	116
4.4.2	QoS utility model for service composition in cloud manufacturing —	118
4.4.3	Simulation results —	122

4.5	A clustering network-based approach to service composition in cloud manufacturing — 130
4.5.1	Service clustering network-based service composition in cloud manufacturing — 130
4.5.2	Service clustering network-based service matching and composition — 135
4.5.3	Experiment — 137
4.6	Service composition in cloud manufacturing with deep reinforcement learning (DRL) — 144
4.6.1	DRL-based QoS-aware model for service composition in cloud manufacturing — 148
4.6.2	Case study — 161
4.7	Conclusions — 173
	References — 173
5	Scheduling in cloud manufacturing: an overview — 176
5.1	Introduction — 176
5.2	Procedure of scheduling in cloud manufacturing — 176
5.3	Characteristics of scheduling in cloud manufacturing — 178
5.3.1	Operation mode-related characteristics — 178
5.3.2	Resource/service and requirement task-related characteristics — 179
5.3.3	Technology-enabled and knowledge-related characteristics — 180
5.4	Research challenges and methodologies — 181
5.4.1	Research challenges — 181
5.4.2	Methodologies — 184
5.5	Conclusions — 185
	References — 185
6	Multitask-oriented scheduling, modeling, and analysis for cloud manufacturing — 191
6.1	Introduction — 191
6.2	Literature review — 191
6.3	A model for multitask-oriented service composition and scheduling in cloud manufacturing — 194
6.3.1	An illuminating example — 194
6.3.2	Model — 196
6.3.3	Simulation experiments — 204
6.4	Workload-based multitask scheduling in cloud manufacturing — 206
6.4.1	A motivating example — 213
6.4.2	Model — 215

6.4.3	An example for the multitask scheduling model —	225
6.4.4	Simulation experiments —	230
6.5	Conclusions —	244
	References —	245
7	Intelligent optimization of algorithm-based scheduling in cloud manufacturing —	248
7.1	Introduction —	248
7.2	Related work —	250
7.3	QoS evaluation-based multitask scheduling in cloud manufacturing —	255
7.3.1	Problem description —	255
7.3.2	Scheduling strategy —	257
7.3.3	Scheduling algorithm —	260
7.3.4	Simulations and discussion —	261
7.4	Multiobjective multitask scheduling in cloud manufacturing —	266
7.4.1	Problem description —	266
7.4.2	Mathematical model —	267
7.4.3	Design of multiobjective algorithms for multitask scheduling in cloud manufacturing —	270
7.4.4	Experimental results —	274
7.5	Conclusion and future work —	285
	References —	285
8	Multiagent-based scheduling in cloud manufacturing —	289
8.1	Introduction —	289
8.2	Literature review —	290
8.2.1	Agent-based manufacturing or production scheduling —	290
8.2.2	Multiagent-based scheduling in other manufacturing systems —	291
8.2.3	Scheduling in cloud manufacturing —	292
8.2.4	Scheduling in industry 4.0 —	294
8.2.5	Scheduling in the context of the industrial internet —	294
8.3	Multiagent-based scheduling in cloud manufacturing with dynamic task arrivals —	295
8.3.1	Multiagent architecture for scheduling in cloud manufacturing —	295
8.3.2	A multiagent model for scheduling in cloud manufacturing —	301
8.3.3	Case study —	304
8.4	A multiagent architecture for scheduling in platform-based smart manufacturing systems —	308
8.4.1	Procedure —	309

8.4.2	Characteristics and requirement — 310
8.4.3	Multiagent architecture for scheduling in PSMSs — 313
8.4.4	Model — 319
8.4.5	Case study — 330
8.5	Conclusion — 336
	References — 338
9	Dynamic scheduling of cloud manufacturing services based on simulation — 342
9.1	Background and challenges — 342
9.2	Simulation for logistics service selection — 343
9.2.1	Logistics service selection problem in cloud manufacturing — 343
9.2.2	Logistics service selection model — 344
9.2.3	Simulation — 347
9.3	Simulation model of dynamic service scheduling — 351
9.3.1	Analysis of service scheduling in cloud manufacturing — 352
9.3.2	Simulation model of cloud manufacturing service scheduling — 355
9.4	Simulation of production modes for cloud manufacturing enterprises — 359
9.4.1	Production process of cloud enterprises — 360
9.4.2	Production model of enterprises — 362
9.4.3	Simulation model — 365
9.5	Conclusion — 366
	References — 367
10	DRL-based scheduling in cloud manufacturing — 368
10.1	Introduction — 368
10.2	Literature review — 368
10.3	Six-dimensional description of scheduling in cloud manufacturing — 370
10.4	A framework for scheduling in cloud manufacturing with DRL — 371
10.5	A DRL model for online single-task scheduling — 373
10.6	Conclusion — 376
	References — 377
11	Credible scheduling in cloud manufacturing — 379
11.1	Introduction — 379
11.2	Literature review — 379
11.2.1	Scheduling in cloud manufacturing — 379
11.2.2	Blockchain — 380
11.2.3	IoT and edge computing — 381

11.3	A framework for IoT-and blockchain-based credible scheduling — 382
11.3.1	A proposed framework for IoT- and blockchain-based credible scheduling — 383
11.3.2	Trustworthy manufacturing resources — 385
11.3.3	Service trust — 386
11.3.4	A case study — 386
11.4	Conclusion and future work — 388
	References — 389
12	Service management-oriented knowledge in cloud manufacturing — 391
12.1	Introduction — 391
12.2	Knowledge in cloud manufacturing — 397
12.2.1	Traditional knowledge — 397
12.2.2	Knowledge in cloud manufacturing — 397
12.3	Classification and characteristics of knowledge in cloud manufacturing — 400
12.3.1	Classification of traditional knowledge — 400
12.3.2	Classification of knowledge in cloud manufacturing — 401
12.3.3	Characteristics of knowledge in cloud manufacturing — 403
12.4	Lifecycle management of knowledge in cloud manufacturing — 406
12.5	Relationship between knowledge and service in cloud manufacturing — 407
12.5.1	Knowledge and service are inseparable — 408
12.5.2	The need for knowledge in service life cycle management — 409
12.6	Knowledge representation and acquisition — 412
12.6.1	Knowledge representation in cloud manufacturing — 412
12.6.2	Knowledge acquisition in cloud manufacturing — 415
12.7	Conclusion — 416
	References — 417
13	Outlook — 418
	References — 421
	Index — 423
