

CONTENTS

1. Introduction

2. Basic Principles of Wildlife Disease Ecology

- 2.1 Natural Ecosystems and the Host-Pathogen Equilibrium
- 2.2 The Evolution of Virulence
- 2.3 Ecological Implications of Pathogens that Manipulate their Host
- 2.4 Host Factors That Influence Disease Susceptibility and Transmission
 - 2.4.1 *Factors Determining Human-to-Human Transmissibility of Zoonotic Pathogens via Contact*

3. The Concept of One Health

4. The Emergence of Diseases and Reservoir Systems

- 4.1 *Disease Reservoirs: From Conceptual Frameworks to Applicable Criteria*

5. Molecular Methods to Investigate Disease Epidemiology in Wildlife

- 5.1 Serological Test
- 5.2 Nucleic Acid Amplification Tests
 - 5.2.1 Molecular Typing
 - 5.2.2 Metataxonomics
 - 5.2.2.1 *A Metataxonomic Tool to Investigate the Diversity of Treponema*
 - 5.2.3 High-Throughput Whole Genome Sequencing
 - 5.2.4 DNA Target Enrichment
- 5.3 The Importance of Validation and Standardization
 - 5.3.1 *Validation of Serological Tests for the Detection of Antibodies Against Treponema pallidum in Nonhuman Primates*
 - 5.3.2 *Gene Target Selection for Loop-Mediated Isothermal Amplification for Rapid Discrimination of Treponema pallidum Subspecies*
 - 5.3.3 *Multiplex Mediator Displacement Loop-Mediated Isothermal Amplification for Detection of Treponema pallidum and Haemophilus ducreyi*
 - 5.3.4 *The Impact of Storage Buffer, DNA Extraction Method, and Polymerase on Microbial Analysis*
- 5.4 The Importance of Baseline Data in Ecology

6. The Control, Elimination and Eradication of Diseases associated with Wildlife Reservoirs

7. Treponema pallidum, an Ancient and Stealthy Pathogen

- 7.1 *Genetics of Human and Animal Uncultivable Treponemal Pathogens*
- 7.2 Nonhuman Primates as a Potential Reservoir for Human Yaws Infection
 - 7.2.1 *Challenges and Key Research Questions for Yaws Eradication*
 - 7.2.2 *Treponemal Infection in Nonhuman Primates as Possible Reservoir for Human Yaws*
- 7.3 Pathogen Maintenance in the Potential Nonhuman Reservoir

- 7.3.1 *High Prevalence of Antibodies Against the Bacterium Treponema pallidum in Senegalese Guinea Baboons (Papio papio)*
- 7.3.2 *Endemicity of Yaws and Seroprevalence of Treponema pallidum Antibodies in Nonhuman Primates, Kenya*
- 7.3.3 *Widespread Treponema pallidum Infection in Nonhuman Primates, Tanzania*
- 7.3.4 *Nonhuman Primates Across Sub-Saharan Africa are Infected with the Yaws Bacterium Treponema pallidum subsp. pertenue*
- 7.3.5 *Complete Genome Sequences of Two Strains of Treponema pallidum subsp. pertenue from Indonesia: Modular Structure of Several Treponemal Genes*
- 7.3.6 *Survey of Treponemal Infections in Free-Ranging and Captive Macaques, 1999-2012*
- 7.4 *Feasible Transmission Routes for T. pallidum Infection*
- 7.4.1 *Strain Diversity of Treponema pallidum subsp. pallidum suggests rare interspecies transmission in African nonhuman primates*
- 7.4.2 *Isolation of Treponema DNA from Necrophagous Flies in a Natural Ecosystem*
- 7.4.3 *Haemophilus ducreyi DNA is Detectable on the Skin of Asymptomatic Children, Flies and Fomites in Villages of Papua New Guinea*
- 7.4.4 *Mating Avoidance in Female Olive Baboon (Papio anubis) Infected by Treponema pallidum*
- 7.4.5 *Complete Mitochondrial Genome of an Olive Baboon (Papio anubis) From Gombe National Park, Tanzania*
- 7.4.6 *Distribution of Mitochondrial Clades and Morphotypes of Baboons Papio spp. (Primates: Cercopithecidae) in Eastern Africa*
- 7.4.7 *Inverted Intergeneric Introgression Between Critically Endangered Kipunjis and Yellow Baboons in Two Disjunct Populations*
- 7.4.8 *Serosurvey of Treponema pallidum infection among children with skin ulcers in the Tarangire-Manyara Ecosystem, Northern Tanzania*

8. General Discussion on the Yaws Case in Nonhuman Primates

9. Summary

9.1 Zusammenfassung
