Preface — V

1 Introduction — 1

- 1.1 Brief historical overview — 1
- 1.2 Basic principles of EPR — 4
 - 1.2.1 Atomic magnetic moments — 4
 - 1.2.2 Quantum mechanical discussion — 10
 - 1.2.3 The EPR experiment — 12
 - 1.2.4 EPR lineshapes — 14
 - 1.2.5 Basic EPR spectrometer — 15
- Works cited — 17

2 Quantum mechanical background and formalism — 19

- 2.1 The Schrödinger equation — 19
- 2.2 The hydrogen atom — 20
 - 2.2.1 The Schrödinger equation in the hydrogen atom — 20
 - 2.2.2 Orbital angular momentum — 26
 - 2.2.3 Orbital angular momentum in a magnetic field — 26
 - 2.2.4 Spin angular momentum — 29
 - 2.2.5 Electron spin inside a magnetic field — 32
- 2.3 Perturbation theory — 35
- 2.4 Spin-orbit coupling — 37
- 2.5 Total angular momentum — 42
- 2.6 Multielectron atoms — 44
- 2.7 Total angular momentum in multielectron atoms — 46
 - 2.7.1 LS or Russell–Saunders coupling — 47
 - 2.7.2 Hund's rules — 48
 - 2.7.3 Spin-orbit coupling in the Russell–Saunders scheme — 48
 - 2.7.4 J - J coupling — 50
 - 2.7.5 Quenching of the orbital angular momentum — 51
- 2.8 The Zeeman effect — 52
- 2.9 Nuclear hyperfine interaction — 54
- References — 57

3 EPR fundamentals — 59

- 3.1 Magnetic resonance — 59
 - 3.1.1 Phenomenological approach — 59
 - 3.1.2 Quantum mechanical approach — 63
- 3.2 Relaxation and lineshapes — 66
 - 3.2.1 Spin-lattice relaxation — 66

3.2.2	Spin-spin relaxation —	68
3.2.3	The Bloch equations —	70
3.3	Further discussion of relaxation mechanisms —	74
3.4	Experimental determination of relaxation times —	78
3.5	EPR lineshapes —	79
3.5.1	Homogeneous broadening —	81
3.5.2	Inhomogeneous broadening —	81
3.5.3	Line narrowing —	82
3.6	Saturation effects on the EPR signal —	83
3.7	Transition probabilities —	86
3.7.1	$S = 1/2$ system in cubic symmetry —	88
3.7.2	$S = 1/2$ system in axial symmetry —	89
3.7.3	$S = 1$ system —	89
3.8	The g -value —	90
3.8.1	Deviations of g relative to free electron value —	91
3.8.2	g -Value anisotropy —	93
3.8.3	g -Strain broadening —	97
3.9	Zero-field splittings —	99
3.9.1	Half-integer spin (Kramers) systems —	101
3.9.2	Rhombograms —	104
3.9.3	Integer spin (non-Kramers) systems —	106
3.10	Hyperfine interactions —	109
3.10.1	Superhyperfine interactions —	112
3.10.2	Resolution of hyperfine spectra —	115
3.10.3	Hyperfine anisotropy —	117
3.11	Symmetry effects —	119
	References —	123
4	Symmetry and crystal field theory —	125
4.1	Effect of symmetry on the orbital states of transition series ions —	126
4.2	Spin states of transition series ions —	129
4.2.1	Spin-only systems —	129
4.2.2	Systems with spin-orbit coupling —	129
4.2.3	Kramers and non-Kramers systems —	131
4.2.4	Examples of EPR spectra in non-Kramers systems —	135
4.3	Crystal field theory —	139
4.3.1	Transition series ions in square planar and octahedral symmetries —	141
4.3.2	Rare earth ions in axial symmetry —	143
4.3.3	Beyond basic crystal field theory —	146
	References —	147

5	The spin Hamiltonian — 149
5.1	Crystal field and Zeeman Hamiltonians — 150
5.1.1	$S = 1/2$ ground state — 150
5.1.2	$S = 3/2$ ground state — 152
5.1.3	$S = 1$ ground state — 158
5.2	Hyperfine spin Hamiltonian — 159
5.2.1	$S = 1/2$ and $I = 1/2$ system in cubic symmetry — 162
5.2.2	$S = 1/2$ and $I = 3/2$ system in cubic symmetry — 165
5.2.3	$S = 1/2$ and $I = 1/2$ system in axial symmetry — 168
5.2.4	Interactions with ligand nuclei — 169
5.3	Interacting spins — 174
5.3.1	Effect of interionic interactions on the EPR spectrum — 177
5.3.2	Nature of interactions — 179
5.3.3	Theory of pair interactions — 185
5.3.4	Pair spectra in the presence of hyperfine interactions — 191
	References — 193
6	Experimental techniques — 195
6.1	Basic low-temperature EPR experiment — 196
6.2	Main spectrometer components — 196
6.2.1	Microwave oscillators — 199
6.2.2	Propagation of microwave radiation in waveguides — 199
6.2.3	Microwave isolator — 202
6.2.4	Power leveler — 203
6.2.5	Reference arm: attenuators and phase control — 203
6.2.6	Circulator — 204
6.2.7	The resonant cavity — 205
6.2.8	Coupling the microwave radiation into the cavity — 209
6.2.9	The quality factor Q — 211
6.2.10	Modulation coils — 214
6.2.11	Electromagnet — 216
6.2.12	Detector — 218
6.3	Cryogenic systems — 218
6.3.1	Continuous-flow systems — 220
6.3.2	Special cryogenic setups — 221
6.4	EPR samples — 222
6.4.1	Single crystals — 223
6.4.2	Frozen solution samples — 225
6.4.3	Liquid samples — 225
	References — 226
