1	Structural and spectroscopic properties of 3-halogenobenzaldehydes: DFT and TDDFT simulations — 1
1.1	Introduction — 1
1.2	Computations — 2
1.3	Results and discussion — 3
1.3.1	Analysis of structure — 3
1.3.2	Analysis of carbonyl stretching frequency — 3
1.3.3	Electronic properties — 9
1.4	Conclusions — 11
	Index — 13
	References — 13

Francis Opoku and Penny P. Govender

2	Atomistic insight into the significantly enhanced photovoltaic cells of monolayer GaTe₂ via two-dimensional van der Waals heterostructures engineering — 15
2.1	Introduction — 15
2.2	Computational details — 17
2.3	Results and discussion — 18
2.3.1	Structure models and electronic properties of monolayers — 18
2.3.2	The catalytic stability of the MTe ₂ /GaTe vdW heterostructures — 19
2.3.3	Electronic properties of the MTe ₂ /GaTe vdW heterostructures — 20
2.3.4	Optical properties — 25
2.3.5	PCE of photovoltaic cells — 26
2.4	Conclusions — 27
	References — 28

Sulochana Bhalekar, Archana Bhagwat and Nagaiyan Sekar

3	Fluorescent styryl chromophores with rigid (pyrazole) donor and rigid (benzothiophenedioxide) acceptor – complete density functional theory (DFT), TDDFT and nonlinear optical study — 33
3.1	Introduction — 33
3.1.1	Computational details — 35
3.1.2	Theoretical interpretation — 35
3.1.3	TDDFT analysis for absorption and emission — 36
3.1.4	TDDFT emission parameters obtained from first excited state geometry — 36
3.1.5	Frontier molecular orbital energies (FMOs) — 41

3.1.6	Electrophilicity index —	44
3.1.7	hyperpolarizability of 1a, 1b and 1c in all functionals —	46
3.1.8	Fundamental limits of hyperpolarizability —	52
3.1.9	Intrinsic hyperpolarizability —	53
3.2	Conclusions —	53
	References —	54

Suvidha Shinde, Nagaiyan Sekar

4 Comparative studies of excited state intramolecular proton transfer (ESIPT) and azo-hydrazone tautomerism in naphthalene-based fluorescent acid azo dyes by computational study — 61

4.1	Introduction —	61
4.2	Experimental section —	62
4.2.1	Computational details —	62
4.2.2	Synthesis —	63
4.3	Results and discussion —	63
4.3.1	DFT study —	63
4.3.2	Geometry optimization —	64
4.3.3	Calculated energies of tautomeric forms —	66
4.3.4	Frontier molecular orbitals —	66
4.3.5	Comparative energies and FMOs of representative naphthol and its analogs —	68
4.3.6	Molecular electrostatic potential analysis —	72
4.3.7	Electrophilicity index —	74
4.3.8	Hyper-hardness values of molecules —	75
4.4	Conclusions —	78
	References —	80

Ibrahim Olasegun Abdulsalami, Banjo Semire
and Isa Adewale Bello

5 Theoretical examination of efficiency of anthocyanidins as sensitizers in dye-sensitized solar cells — 83

5.1	Introduction —	83
5.2	Computational details —	86
5.3	Results and discussion —	87
5.3.1	Molecular geometry —	87
5.3.2	Frontier molecular orbitals and band gap energies of the studied molecules —	88
5.3.3	Electronic properties of the molecules studied —	94
5.3.4	Reactivity descriptors and electronic properties of the dye molecules in different media for the dye, semiconductor and the dye-semiconductor couples —	96

5.3.5	Local reactivity descriptors — 97
5.4	Conclusions — 99
	References — 100

Joshua Oluwasegun Bamidele, George Oche Ambrose
and Oluwaseun Suleiman Alakanse

6	Selection of oxypeucedanin as a potential antagonist from molecular docking analysis of HSP90 — 103
6.1	Introduction — 103
6.2	Methodology — 104
6.2.1	Ligand selection and preparation — 104
6.2.2	The target protein preparation and accession — 104
6.2.3	Molecular docking employing PyRx — 106
6.2.4	Validation of docking results — 106
6.3	Results and discussion — 107
6.4	Conclusions — 110
	References — 110

Adedoyin Igunnu, George Oche Ambrose and Temidayo Olamide Adigun

7	Mechanistic insight into the interactions between thiazolidinedione derivatives and PTP-1B combining 3D QSAR and molecular docking in the treatment of type 2 diabetes — 113
7.1	Introduction — 114
7.2	Materials and methods — 115
7.2.1	Experimental data — 115
7.2.2	Accession of chemical structures and descriptors generation — 115
7.2.3	Data normalization — 116
7.2.4	Selection of training and test set — 117
7.2.5	Genetic algorithm-multiple linear regression (GA-MLR) QSAR model development — 118
7.2.6	Model validation — 119
7.2.7	Geometry optimization — 120
7.2.8	Molecular docking using PyRx — 120
7.3	Results and discussion — 121
7.3.1	Principal components analysis — 121
7.3.2	Descriptors selection — 121
7.3.3	Development and validation of QSAR models — 122
7.3.4	Docking analysis — 125
7.4	Conclusions — 131
	References — 132

Aleksey E. Kuznetsov

8 Review of research of nanocomposites based on graphene quantum dots — 135

- 8.1 Introduction — 135
- 8.2 Graphene QDs-based nanocomposites — 136
 - 8.2.1 QDs-nanocomposites with porphyrins and their derivatives — 136
 - 8.2.2 Nanocomposites/complexes involving other compounds — 143
- 8.3 Conclusions and perspectives — 152
- References — 153

Oluwakemi A. Oloba-Whenu, Idris O. Junaid and Chukwuemeka Isanbor

9 A computational study of the S_NAr reaction of 2-ethoxy-3,5-dinitropyridine and 2-methoxy-3,5-dinitropyridine with piperidine — 161

- 9.1 Introduction — 161
- 9.2 Computational details — 164
- 9.3 Results and discussion — 164
 - 9.3.1 The base-catalyzed pathway — 169
 - 9.3.2 Comparison of both pathways — 171
- 9.4 Conclusions — 173
- References — 174

Kazeem Adelani Alabi, Ibrahim Olasegun Abdulsalami, Moriam Dasola Adeoye, Shukurat Modupe Aderinto and Rasheed Adewale Adigun

10 Synthesis, characterization and computational studies of 1,3-bis[(*E*)-furan-2-yl)methylene]urea and 1,3-bis[(*E*)-furan-2-yl)methylene]thiourea — 177

- 10.1 Introduction — 177
- 10.2 Materials and methodologies — 179
 - 10.2.1 Experimental details — 179
 - 10.2.2 Computational results — 181
- 10.3 Results and discussion — 181
 - 10.3.1 Results — 181
- 10.4 Conclusions — 185
- References — 185

Mireille K. Bilonda and Liliana Mammino

11 Computational studies of biologically active alkaloids of plant origin: an overview — 187

- 11.1 Introduction — 188
 - 11.1.1 Importance of computational studies of biologically active molecules — 188

11.1.2	Classification and properties of alkaloids —	189
11.1.3	Types of alkaloids considered in this work —	190
11.2	Conformational studies of alkaloids from natural sources —	195
11.2.1	Roles of conformational studies —	195
11.2.2	Conformational studies of cinchona alkaloids (CAs) —	196
11.2.3	Conformational studies of nicotinoids —	201
11.2.4	Conformational studies of pyrazole alkaloids (PA) —	203
11.2.5	Conformational studies of naphthylisoquinoline alkaloids (NAs) —	204
11.3	Examples of intermolecular interactions and docking studies —	205
11.4	Examples of computational studies aimed at confirming or elucidating experimental results —	205
11.5	Discussion and conclusions —	206
	References —	208

Tunde L. Yusuf, Eric O. Akintemi, Sulaimon Olagboye and Gideon F. Tolufashe

12 Investigating the biological actions of some Schiff bases using density functional theory study — 219

12.1	Introduction —	219
12.2	Materials and methods —	221
12.3	Results and discussion —	222
12.3.1	Molecular geometry —	222
12.3.2	Molecular electrostatic potential (ESP) surface —	222
12.3.3	Frontier molecular orbitals —	224
12.3.4	Global reactivity descriptors —	225
12.3.5	Spectroscopic features —	226
12.4	Conclusions —	229
	References —	230

13 Molecular mechanics approaches for rational drug design: forcefields and solvation models — 233

13.1	Introduction —	233
13.2	Molecular mechanics —	235
13.2.1	The rationale of molecular mechanics methods —	235
13.2.2	Underlying principles of molecular mechanics —	235
13.2.3	Quantum mechanical (QM) versus molecular mechanical (MM) —	236
13.3	Force fields for molecular mechanics analysis of protein and macromolecular systems —	238
13.3.1	Force field terms —	238

13.3.2	General classification of force fields —	242
13.3.3	Force field applications —	245
13.4	Solvation models —	246
13.4.1	Rationale —	246
13.4.2	Implicit and explicit models —	247
13.5	Conclusions —	248
	References —	250
