Preface — XI

Preface to the second edition — XVIII

1	Background Generalities — 1
1.1	Order and topology — 1
1.2	Linear, nonlinear, and convex analysis — 9
1.2.a	Linear functional analysis — 10
1.2.b	Convex sets — 14
1.2.c	Means of continuous functions — 18
1.2.d	Solving abstract nonlinear equations — 22
1.3	Function and measure spaces — 25
1.3.a	Bochner and Lebesgue spaces — 26
1.3.b	Spaces of measures — 30
1.3.c	Spaces of smooth functions and Sobolev spaces — 33
1.4	Some differential and integral equations — 38
1.4.a	Ordinary differential and differential-algebraic equations — 38
1.4.b	Partial differential equations of elliptic type — 45
1.4.c	Partial differential equations of parabolic type — 50
1.4.d	Integral equations of Hammerstein type — 54
1.5	Basics from optimization theory — 55
1.5.a	Existence, stability, approximation — 55
1.5.b	Optimality conditions of the 1st order — 61
1.5.c	Multicriteria optimization — 70
1.5.d	Non-cooperative game theory — 72
2	Theory of Convex Compactifications — 81
2.1	Convex compactifications — 82
2.2	Canonical form of convex compactifications — 84
2.3	Convex σ -compactifications — 93
2.4	Approximation of convex compactifications — 103
2.5	Extension of mappings — 106
2.6	Inverse systems of convex compactifications — 111
3	Young Measures and Their Generalizations — 117
3.1	Classical Young measures — 118
3.1.a	Basic scenario and results — 118
3.1.b	Some illustrations — 131
3.1.c	Some more results — 133

3.2	Various generalizations — 135
3.2.a	Generalization by Fattorini — 136
3.2.b	Generalization by Schonbek, Ball, Kinderlehrer and Pedregal — 138
3.2.c	Generalization by DiPerna and Majda — 146
3.2.d	Fonseca's extension of L^1 -spaces — 163
3.3	A class of convex compactifications of balls in L^p -spaces — 166
3.3.a	Generalized Young functionals $Y_{H,\varrho}^p(\Omega; \mathcal{S})$ — 166
3.3.b	The composition $h \circ \eta$ — 174
3.3.c	Some concrete examples — 176
3.3.d	Coarse polynomial compactification by algebraic moments — 186
3.3.e	Compatible systems of Young functionals on $B(I; L^p)$ — 188
3.4	A class of convex σ -compactifications of L^p -spaces — 191
3.5	Approximation theory — 204
3.5.a	A general construction — 205
3.5.b	An approximation over Ω — 211
3.5.c	An approximation over S — 215
3.5.d	Higher-order constructions by quasi-interpolation — 219
3.6	Extensions of Nemytskiĭ mappings — 222
3.6.a	One-argument mappings: affine extensions — 223
3.6.b	Two-argument mappings: semi-affine extensions — 226
3.6.c	Two-argument mappings: bi-affine extensions — 236
4	Relaxation in Optimization Theory — 243
4.1	Abstract optimization problems — 244
4.2	Optimization problems on Lebesgue spaces — 263
4.3	Optimal control of finite-dimensional dynamical systems — 277
4.3.a	Original problem — 277
4.3.b	Relaxation scheme, correctness, well-posedness — 288
4.3.c	Optimality conditions — 295
4.3.d	Approximation theory — 305
4.3.e	Illustrative computational simulations: oscillations — 310
4.3.f	Illustrative computational simulations: oscillations and concentrations — 315
4.3.g	Optimal control of differential-algebraic systems — 318
4.4	Elliptic optimal control problems — 325
4.4.a	The original problem and its relaxation — 325
4.4.b	Optimality conditions in semilinear case — 333
4.4.c	Optimal control of Navier-Stokes' equations — 339
4.4.d	Optimal material design of some stratified media — 342
4.5	Parabolic optimal control problems — 346
4.5.a	Infinite-dimensional dynamical-system approach — 348
4.5.b	An approach through parabolic partial differential equations — 355

4.5.c	Optimal control of Navier-Stokes equations —	365
4.6	Optimal control of integral equations —	373
5	Relaxation in Variational Calculus: Scalar Case —	382
5.1	Convex compactifications of Sobolev spaces —	383
5.2	Relaxation of variational problems; $p > 1$. —	394
5.3	Optimality conditions for relaxed problems —	401
5.4	Relaxation of variational problems; $p = 1$. —	410
5.5	Convex approximations of relaxed problems —	416
5.6	Example: Microstructure in ferromagnetic materials —	429
6	Relaxation in Variational Calculus: Vectorial Case —	435
6.1	Prerequisites around quasiconvexity —	436
6.2	Gradient generalized Young functionals —	441
6.3	Variational problems and their relaxation —	453
6.4	FEM-approximation —	458
6.5	Further approximation: an inner case —	461
6.6	Further approximation: an outer case —	464
6.7	Multiwell problems: illustrative calculations —	469
7	Relaxation in Game Theory —	483
7.1	Abstract game-theoretical problems —	484
7.2	Games on Lebesgue spaces —	490
7.3	Example: Games with dynamical systems —	493
7.4	Example: Elliptic games —	507
8	Relaxation in evolutionary problems —	513
8.1	Evolution on abstract convex compactifications —	513
8.1.a	Rate-independent evolution —	515
8.1.b	Quasistatic rate-dependent evolution —	521
8.2	Applications of relaxation in rate-independent evolution —	523
8.2.a	Perfect plasticity at small strains —	524
8.2.b	Evolution of microstructure in ferromagnetic materials —	526
8.2.c	Evolution of microstructure in shape-memory materials —	528
8.3	Notes about measure-valued solutions to parabolic equations —	532
Bibliography —		539
List of Symbols —		571
Index —		577
