

1	Introduction, Importance and Development of Fluid Mechanics	1
1.1	Fluid Flows and Their Significance	1
1.2	Sub-Domains of Fluid Mechanics	5
1.3	Historical Developments	9
	Further Readings	15
2	Mathematical Basics	17
2.1	Introduction and Definitions	17
2.2	Tensors of Zero Order (Scalars)	18
2.3	Tensors of First Order (Vectors)	20
2.4	Tensors of Second Order	24
2.5	Field Variables and Mathematical Operations	26
2.6	Substantial Quantities and Substantial Derivative	29
2.7	Gradient, Divergence, Rotation and Laplace Operators	31
2.8	Complex Numbers	32
2.8.1	Axiomatic Introduction to Complex Numbers	33
2.8.2	Graphical Representation of Complex Numbers	35
2.8.3	The Gauss Complex Number Plane	35
2.8.4	Trigonometric Representation	35
2.8.5	Stereographic Projection	37
2.8.6	Elementary Function	38
	Further Readings	44
3	Physical Basics	45
3.1	Solids and Fluids	45
3.2	Molecular Properties and Quantities of Continuum Mechanics	47
3.3	Transport Processes in Newtonian Fluids	51
3.3.1	General Considerations	51
3.3.2	Pressure in Gases	54
3.3.3	Molecular-Dependent Momentum Transport	59
3.3.4	Molecular Transport of Heat and Mass in Gases	62

3.4	Viscosity of Fluids	66
3.5	Balance Considerations and Conservation Laws	70
3.6	Thermodynamic Considerations	73
	Further Readings	80
4	Basics of Fluid Kinematics	81
4.1	General Considerations	81
4.2	Substantial Derivatives	82
4.3	Motion of Fluid Elements	84
	4.3.1 Path Lines of Fluid Elements	84
	4.3.2 Streak Lines of Locally Injected Tracers	89
4.4	Kinematic Quantities of Flow Fields	93
	4.4.1 Stream Lines of a Velocity Field	93
	4.4.2 Stream Function and Stream Lines of Two-Dimensional Flow Fields	97
	4.4.3 Divergence of a Flow Field	101
4.5	Translation, Deformation and Rotation of Fluid Elements	104
4.6	Relative Motions	108
	Further Readings	113
5	Basic Equations of Fluid Mechanics	115
5.1	General Considerations	115
5.2	Mass Conservation (Continuity Equation)	118
5.3	Newton's Second Law (Momentum Equation)	122
5.4	The Navier–Stokes Equations	126
5.5	Mechanical Energy Equation	132
5.6	Thermal Energy Equation	134
5.7	Basic Equations in Different Coordinate Systems	139
	5.7.1 Continuity Equation	139
	5.7.2 Navier–Stokes Equations	141
5.8	Special Forms of the Basic Equations	147
	5.8.1 Transport Equation for Vorticity	148
	5.8.2 The Bernoulli Equation	149
	5.8.3 Crocco Equation	151
	5.8.4 Further Forms of the Energy Equation	153
5.9	Transport Equation for Chemical Species	155
	Further Readings	156
6	Extended Basic Equations of Fluid Mechanics	157
6.1	General Introduction	157
6.2	Extended Diffusive Transport Equations	160
	6.2.1 Mass Transport Equations	160
	6.2.2 Heat Transport Equations	165
	6.2.3 Momentum Transport Equations	170

6.3	Analytical and Numerical Treatments of Micro-Channel and Micro-Capillary Flows	176
6.3.1	Summary of Numerical Investigations	177
6.3.2	Analytical Treatments	183
6.4	Pressure Gradient Versus Wall Reflection Effects	189
	Further Readings	194
7	Hydrostatics and Aerostatics	195
7.1	Hydrostatics	195
7.2	Connected Containers and Pressure-Measuring Instruments	207
7.2.1	Interconnected Containers	207
7.2.2	Pressure-Measuring Instruments	209
7.3	Free Fluid Surfaces	212
7.3.1	Surface Tension	212
7.3.2	Water Columns in Tubes and Between Plates	217
7.3.3	Bubble Formation on Nozzles	220
7.4	Aerostatics	228
7.4.1	Pressure in the Atmosphere	228
7.4.2	Rotating Containers	232
7.4.3	Aerostatic Buoyancy	233
7.4.4	Conditions for Aerostatics: Stability of Layers	236
	Further Readings	238
8	Similarity Theory	239
8.1	Introduction	239
8.2	Dimensionless Form of the Differential Equations	243
8.2.1	General Remarks	243
8.3	Dimensionless Form of the Differential Equations	245
8.3.1	Considerations in the Presence of Geometric and Kinematic Similarities	251
8.3.2	Importance of Viscous Velocity, Time and Length Scales	255
8.4	Dimensional Analysis and π -Theorem	259
	Further Readings	266
9	Integral Forms of the Basic Equations	267
9.1	Integral Form of the Continuity Equation	268
9.2	Integral Form of the Momentum Equation	270
9.3	Integral Form of the Mechanical Energy Equation	272
9.4	Integral Form of the Thermal Energy Equation	276
9.5	Applications of the Integral Form of the Basic Equations	277
9.5.1	Outflow from Containers	278
9.5.2	Exit Velocity of a Nozzle	279

9.5.3	Momentum on a Plane Vertical Plate	280
9.5.4	Momentum on an Inclined Plane Plate	282
9.5.5	Jet Deflection by an Edge	285
9.5.6	Mixing Process in a Channel of Constant Cross-Section in the Flow Direction	286
9.5.7	Force on a Turbine Blade in a Viscosity-Free Fluid	288
9.5.8	Force on a Grid with Periodical Blades	289
9.5.9	Euler's Turbine Equation	292
9.5.10	Power of Flow Machines	293
	Further Readings	297
10	Stream Tube Theory	299
10.1	General Considerations	299
10.2	Derivations of the Basic Equations	301
10.2.1	Continuity Equation	301
10.2.2	Momentum Equation	304
10.2.3	Bernoulli Equation	305
10.2.4	Total Energy Equation	306
10.3	Incompressible Flows	308
10.3.1	Hydromechanical Nozzle Flows	308
10.3.2	Sudden Cross-Sectional Area Extension	310
10.4	Compressible Flows	311
10.4.1	Influences of Area Changes on Flows	311
10.4.2	Pressure-Driven Flows Through Converging Nozzles	315
	Further Readings	326
11	Potential Flows	327
11.1	Potential and Stream Functions	327
11.2	Potential and Complex Functions	333
11.3	Uniform Flow	336
11.4	Corner and Sector Flows	337
11.5	Source or Sink Flows and Potential Vortex Flow	341
11.6	Dipole-Generated Flow	345
11.7	Potential Flow Around a Cylinder	347
11.8	Flow Around a Cylinder With Circulation	349
11.9	Summary of Important Potential Flows	353
11.10	Flow Forces on Bodies	357
	Further Readings	363
12	Wave Motions in Non-Viscous Fluids	365
12.1	General Considerations	365
12.2	Longitudinal Waves: Sound Waves in Gases	369

12.3	Transverse Waves: Surface Waves	376
12.3.1	General Solution Approach	376
12.4	Plane Standing Waves	381
12.5	Plane Progressing Waves	383
12.6	References to Further Wave Motions	388
	Further Readings	389
13	Introduction to Gas Dynamics	391
13.1	Introductory Considerations	391
13.2	Mach Lines and Mach Cone	396
13.3	Non-Linear Wave Propagation, Formation of Shock Waves	399
13.4	Alternative Forms of the Bernoulli Equation	402
13.5	Flow with Heat Transfer (Pipe Flow)	406
13.5.1	Subsonic Flow	409
13.5.2	Supersonic Flow	409
13.6	Rayleigh and Fanno Relations	412
	Further Readings	418
14	Stationary One-Dimensional Fluid Flows of Incompressible Viscous Fluids	419
14.1	General Considerations	419
14.1.1	Equations for Plane Fluid Flows	421
14.1.2	Cylindrical Fluid Flows	421
14.2	Derivations of the Basic Equations for Fully Developed Fluid Flows	423
14.2.1	Equations for Plane Fluid Flows	423
14.2.2	Equations for Cylindrical Fluid Flows	424
14.3	Plane Couette Flow	425
14.4	Plane Fluid Flow Between Plates	428
14.5	Plane Film Flow on an Inclined Plate	432
14.6	Axisymmetric Film Flow	437
14.7	Pipe Flow (Hagen–Poiseuille Flow)	439
14.8	Axial Flow Between Two Cylinders	444
14.9	Film Flows with Two Layers	447
14.10	Two-Phase Plane Channel Flow	450
	Further Readings	453
15	Time-Dependent, One-Dimensional Flows of Viscous Fluids	455
15.1	General Considerations	455
15.2	Accelerated and Decelerated Fluid Flows	459
15.2.1	Stokes First Problem	459
15.2.2	Diffusion of a Vortex Layer	462

15.2.3	Channel Flow Induced by Movements of Plates	465
15.2.4	Pipe Flow Induced by the Pipe Wall Motion	471
15.3	Oscillating Fluid Flows	479
15.3.1	Stokes Second Problem	479
15.4	Pressure Gradient-Driven Fluid Flows	482
15.4.1	Starting Flow in a Channel	482
15.4.2	Starting Pipe Flow	488
	Further Readings	493
16	Fluid Flows of Small Reynolds Numbers	495
16.1	General Considerations	495
16.2	Creeping Fluid Flows Between Two Plates	497
16.3	Plane Lubrication Films	500
16.4	Theory of Lubrication in Roller Bearings	505
16.5	The Slow Rotation of a Sphere	510
16.6	The Slow Translatory Motion of a Sphere	513
16.7	The Slow Rotational Motion of a Cylinder	520
16.8	The Slow Translatory Motion of a Cylinder	522
16.9	Diffusion and Convection Influences on Flow Fields	529
	Further Readings	531
17	Flows of Large Reynolds Number Boundary-Layer Flows	533
17.1	General Considerations and Derivations	533
17.2	Solutions of the Boundary-Layer Equations	539
17.3	Flat Plate Boundary Layer (Blasius Solution)	541
17.4	Integral Properties of Wall Boundary Layers	545
17.5	The Laminar, Plane, Two-Dimensional Free Shear Layer	551
17.6	The Plane, Two-Dimensional, Laminar Free Jet	553
17.7	Plane, Two-Dimensional Wake Flow	559
17.8	Converging Channel Flow	562
	Further Readings	566
18	Unstable Flows and Laminar–Turbulent Transition	569
18.1	General Considerations	569
18.2	Causes of Flow Instabilities	575
18.2.1	Stability of Atmospheric Temperature Distributions	577
18.2.2	Gravitationally Caused Instabilities	580
18.2.3	Instabilities in Annular Clearances Caused by Rotation	583
18.3	Generalized Instability Considerations (Orr–Sommerfeld Equation)	589
18.4	Classifications of Instabilities	593

18.5	Transitional Boundary-Layer Flows	596
	Further Readings	599
19	Turbulent Flows	601
19.1	General Considerations	601
19.2	Statistical Description of Turbulent Flows	606
19.3	Basics of Statistical Considerations of Turbulent Flows	607
	19.3.1 Fundamental Rules of Time Averaging	607
	19.3.2 Fundamental Rules for Probability Density	609
	19.3.3 Characteristic Function	616
19.4	Correlations, Spectra and Time Scales of Turbulence	617
19.5	Time-Averaged Basic Equations of Turbulent Flows	622
	19.5.1 The Continuity Equation	622
	19.5.2 The Reynolds Equation	623
	19.5.3 Mechanical Energy Equation for the Mean Flow Field	626
	19.5.4 Equation for the Kinetic Energy of Turbulence	631
19.6	Characteristic Scales of Length, Velocity and Time of Turbulent Flows	634
19.7	Turbulence Models	638
	19.7.1 General Considerations	638
	19.7.2 General Considerations Concerning Eddy Viscosity Models	642
	19.7.3 Zero-Equation Eddy Viscosity Models	646
	19.7.4 One-Equation Eddy Viscosity Models	655
	19.7.5 Two-Equation Eddy Viscosity Models	658
19.8	Turbulent Wall Boundary Layers	661
	Further Readings	669
20	Numerical Solutions of the Basic Equations	671
20.1	General Considerations	671
20.2	General Transport Equation and Discretization of the Solution Region	676
20.3	Discretization by Finite Differences	680
20.4	Finite-Volume Discretization	683
	20.4.1 General Considerations	683
	20.4.2 Discretization in Space	685
	20.4.3 Discretization with Respect to Time	697
	20.4.4 Treatments of the Source Terms	699
20.5	Computation of Laminar Flows	700
	20.5.1 Wall Boundary Conditions	701
	20.5.2 Symmetry Planes	702
	20.5.3 Inflow Planes	702
	20.5.4 Outflow Planes	702

20.6	Computations of Turbulent Flows	703
20.6.1	Flow Equations to Be Solved	703
20.6.2	Boundary Conditions for Turbulent Flows	708
	Further Readings	714
