

Contents

Foreword — V

List of abbreviations — IX

1 Introduction — 1

- 1.1 Chromatography basics — 2
- 1.1.1 Qualitative analysis — 14
- 1.1.2 Quantitative analysis — 19
- 1.2 Glossary — 23
- References — 29

2 Ion chromatography — 31

- 2.1 Instrumental setup — 34
- 2.1.1 The mobile phase — 36
- 2.1.2 The mobile-phase degasser — 39
- 2.1.3 The pumping system — 40
- 2.1.4 Injectors — 44
- 2.1.5 Tubing and fittings — 47
- 2.1.6 The chromatographic column — 50
- 2.1.7 The column oven — 54
- 2.1.8 The suppressor — 54
- 2.1.9 The detector — 57
- 2.1.10 The waste reservoir — 76
- 2.1.11 The chromatographic data system — 76
- 2.2 IC systems' and columns' manufacturers — 78
- References — 80

3 IC applications in food analysis, quality control, food safety and food authentication — 87

- 3.1 Water — 87
- 3.2 Beer — 98
- 3.3 Wine — 107
- 3.4 Milk and dairy products — 118
- 3.5 Ion chromatographic applications in food authentication — 128
- References — 134

VIII — Contents

4 Recent developments in ion chromatography — 137

4.1 Reagent-free ion chromatography — 137

4.2 Capillary ion chromatography — 140

4.3 Combustion ion chromatography — 146

References — 147

5 Sample preparation for ion chromatography — 153

5.1 Dilution — 154

5.2 Filtration — 155

5.3 Ultrafiltration — 156

5.4 Dialysis — 157

5.5 Solid-phase extraction — 158

References — 160

6 Troubleshooting issues — 163

6.1 Baseline problems — 164

6.2 Retention time reproducibility — 164

6.3 Peak height and peak area reproducibility — 165

6.4 Ghost peaks — 166

6.5 Changes in peak shapes — 166

6.6 Pressure issues and leaks — 167

6.7 Autosampler issues — 169

6.8 Column regeneration — 170

References — 172

Index — 173
